People can achieve great success without an outstanding education and that the Microsoft qualifications a successful person needs can be acquired through the study to get some professional certifications. So it cannot be denied that suitable GH-100 actual test guide do help you a lot; thus we strongly recommend our GH-100 Exam Questions for not only that our GH-100 training guide is designed to different versions: PDF, Soft and APP versions, which can offer you different study methods, but also that our GH-100 learning perp can help you pass the exam without difficulty.

## Microsoft GH-100 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"><li>• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI</li><li>• CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.</li></ul> |
| Topic 2 | <ul style="list-style-type: none"><li>• Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI</li><li>• CD pipelines.</li></ul>                                                                                                                                                                                                              |
| Topic 3 | <ul style="list-style-type: none"><li>• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.</li></ul>                                                                                                                  |

|         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 4 | <ul style="list-style-type: none"> <li>Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.</li> </ul>                                                                |
| Topic 5 | <ul style="list-style-type: none"> <li>Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.</li> </ul> |

## GH-100 Dumps Vce | GH-100 Valid Test Camp

In actuality, the test center around the material is organized flawlessly for self-review considering the way that the competitors who are working in Microsoft working conditions don't get the sufficient opportunity to go to classes for GitHub Administration certification. Thusly, they need to go for self-study and get the right test material to fire scrutinizing up for the GitHub Administration (GH-100) exam. By utilizing Microsoft GH-100 dumps, they shouldn't stress over any additional assistance with that.

### Microsoft GitHub Administration Sample Questions (Q65-Q70):

#### NEW QUESTION # 65

You want to ensure a secret is automatically available to only workflows in internal and private repositories in the organization. Where do you configure the required access policy?

- **A. Organization secret**
- B. Actions policies
- C. Runner groups
- D. Rulesets

**Answer: A**

Explanation:

You set the access policy on the Organization Secret itself - configuring its visibility so it's scoped automatically to only internal and private repositories.

#### NEW QUESTION # 66

What is the potential consequence of enabling multiple rulesets that apply to the same branch in a repository?

- **A. All applicable rulesets will be evaluated, and their combined rules enforced**
- B. Only organization-level rulesets are enforced over repository-level ones
- C. Only the most recently created ruleset will be enforced
- D. Rulesets will override each other, leading to unpredictable behavior

**Answer: A**

Explanation:

If you enable multiple rulesets that target the same branch, GitHub will evaluate every matching ruleset and enforce the aggregate of their rules - so all constraints from all applicable rulesets apply.

#### NEW QUESTION # 67

Which of the following GitHub token types supports fine-grained repository permissions AND is recommended for CI/CD automation?

- A. Personal Access Tokens (PATs)
- B. Device Tokens
- **C. GitHub App Installation Access Tokens**
- D. OAuth tokens

**Answer: C**

Explanation:

GitHub App Installation Access Tokens are privileged to the exact permissions you grant the App - down to individual repositories - and rotate automatically, making them the recommended choice for CI/CD automation workflows that demand least-privilege, fine-grained access.

#### NEW QUESTION # 68

You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- **A. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.**
- B. Rewrite the repository history using git filter-repo or BFG Repo-Cleaner to remove the secret from all commits.
- C. Delete the repository and create a new one to ensure the secret is no longer accessible.
- D. Contact GitHub Support to remove the secret from all forks and clones of the repository.

**Answer: A**

Explanation:

The immediate priority is to revoke or rotate the exposed credential so it can no longer be used; once it's invalidated, you can safely proceed with history-rewriting or other cleanup steps.

#### NEW QUESTION # 69

What additional capability does secret scanning offer for private repositories on GitHub Enterprise Cloud?

- A. Revokes GitHub access tokens automatically.
- B. Rewrites history to remove secrets.
- **C. Allows custom pattern definitions for internal secret formats.**
- D. Disables any code that contains a secret.

**Answer: C**

Explanation:

Secret scanning in private repositories on GitHub Enterprise Cloud lets you define and use custom regular-expression patterns - so you can detect internal or proprietary secret formats beyond the default partner-provided types.

#### NEW QUESTION # 70

.....

The Microsoft GH-100 exam questions are the ideal and recommended study material for quick and easiest GitHub Administration (GH-100) exam dumps preparation. The GitHub Administration (GH-100) practice questions are designed and verified by qualified and renowned Microsoft Certification Exams trainers. They work closely and check all GH-100 Exam Dumps step by step. They also ensure the best possible answer for all GH-100 exam questions and strive hard to maintain the top standard of GitHub Administration (GH-100) exam dumps all the time.
