Our company's 300-720 learning material is very good at helping customers pass the exam and obtain a certificate in a short time, and now I'm going to show you our 300-720 Learning materials.

Cisco 300-720 certification exam is specifically designed to test the knowledge and skills of IT professionals in securing email with Cisco Email Security Appliance. Securing Email with Cisco Email Security Appliance certification is ideal for individuals who want to specialize in network security and are looking to enhance their career prospects in this field. 300-720 Exam covers a wide range of topics related to email security, such as threat prevention, email encryption, data loss prevention, and email authentication.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q100-Q105):

NEW QUESTION # 100

Which feature utilizes sensor information obtained from Talos intelligence to filter email servers connecting into the Cisco ESA?

- A. Connection Reputation Filtering
- B. SpamCop Reputation Filtering
- **C. SenderBase Reputation Filtering**
- D. Talos Reputation Filtering

Answer: C

NEW QUESTION # 101

An engineer deploys a Cisco Secure Email Gateway appliance with default settings in an organization that permits only standard H feature does not work. Which additional action resolves the issue?

- A. Configure the outbound firewall rule to permit traffic on port 3237
- **B. TP/HTTPS ports outbound and notices that the AMP file reputation**
- C. Enable the Use SSL option under Advanced Settings for File Reputation.
- D. Enable the Use HTTP option under Advanced Settings for File Reputation.
- E. Configure the outbound firewall rule to permit traffic on port 8081

Answer: B

Explanation:

Configuring the outbound firewall rule to permit traffic on port 3237 is the additional action that resolves the issue. AMP file reputation is a feature that allows Cisco ESA to check files attached to messages against a cloud-based database of known malicious files and apply appropriate actions, such as block, deliver, or quarantine.

By default, AMP file reputation uses TCP port 3237 to communicate with the cloud-based database. If this port is blocked by a firewall, AMP file reputation will not work properly.

To resolve this issue, the administrator can configure the outbound firewall rule to permit traffic on port 3237 from Cisco ESA.

The other options are not valid actions to resolve the issue, because they do not affect the port used by AMP file reputation.

NEW QUESTION # 102

An administrator manipulated the subnet mask but was still unable to access the user interface. How must the administrator access the Cisco Secure Email Gateway appliance to perform the initial configuration?

- A. Use the data 2 port
- B. Use the data 1 port
- **C. Use the serial or console port**
- D. Use the management port

Answer: C

Explanation:

If you are unable to access the user interface of the Cisco Secure Email Gateway appliance after manipulating the subnet mask, you can use the serial or console port to perform the initial configuration. The serial or console port provides a command-line interface that allows you to configure basic network settings such as IP address, subnet mask, gateway, and hostname3. NEW QUESTION # 103

What are two prerequisites for implementing undesirable URL protection in Cisco ESA? (Choose two.)

- A. Enable email relay.
- **B. Enable outbreak filters.**
- C. Enable port bouncing.
- **D. Enable antispam scanning.**
- E. Enable antivirus scanning.

Answer: B,D

NEW QUESTION # 104

What is the default method of remotely accessing a newly deployed Cisco Secure Email Virtual Gateway when a DHCP server is not available?

- A. DHCP is required for the initial IP address assignment
- B. Manual configuration of an IP address is required through the hypervisor console before remote access
- C. Manual configuration of an IP address is required through the serial port before remote access
- **D. Use the IP address of 192.168.42.42 via the Management port**

Answer: D

Explanation:

The default method of remotely accessing a newly deployed Cisco Secure Email Virtual Gateway when a DHCP server is not available is to use the IP address of 192.168.42.42 via the Management port. This IP address is assigned by default to the Management port of the virtual gateway and can be used to access the web user interface or the command-line interface of the appliance.
