Abstract

Tool-calling empowers Large Language Models (LLMs) to interact with external environments. However, current methods often struggle to handle massive and noisy candidate tools in long-context tool-calling tasks, limiting their real-world application. To this end, we propose **Tool-DC**, a Divide-and-Conquer framework for boosting tool-calling performance of LLMs. The core of Tool-DC is to reduce the reasoning difficulty and make full use of self-reflection ability of LLMs via a "Try-Check-Retry" paradigm. Specifically, Tool-DC involves two variants: 1) the training-free Tool-DC (TF), which is plug-and-play and flexible; 2) the training-based Tool-DC (TB), which is more inference-efficient. Extensive experiments show that both Tool-DC methods out-

Figure 1: Performance comparison on BFCL (Patil et al., 2025) with different candidate tool scales. We see that as the number of candidate tools increases, all models' performance degrades significantly, whereas our Tool-DC method can effectively mitigate this issue.

P.S. Free 2026 WGU Practical-Applications-of-Prompt dumps are available on Google Drive shared by Actual4test: https://drive.google.com/open?id=1HHKq2jK43aX2avSgM-3_uE8fVPvVBZG8

To help you get to know the exam questions and knowledge of the Practical-Applications-of-Prompt practice exam successfully and smoothly, our experts just pick up the necessary and essential content in to our Practical-Applications-of-Prompt test guide with unequivocal content rather than trivia knowledge that exam do not test at all. To make you understand the content more efficient, our experts add charts, diagrams and examples in to Practical-Applications-of-Prompt Exam Questions to speed up you pace of gaining success. Up to now, more than 98 percent of buyers of our Practical-Applications-of-Prompt latest dumps have passed it successfully. Up to now they can be classified into three versions: the PDF, the software and the app version. So we give emphasis on your goals, and higher quality of our Practical-Applications-of-Prompt test guide.

Now in such a Internet so developed society, choosing online training is a very common phenomenon. Actual4test is one of many online training websites. Actual4test's online training course has many years of experience, which can provide high quality learning material for examinee participating in WGU Certification Practical-Applications-of-Prompt Exam and satisfy all the needs of the students.

Practical-Applications-of-Prompt Actual Exam & Relevant Practical-Applications-of-Prompt Questions

You will get high passing score in the WGU Practical-Applications-of-Prompt Real Exam with our valid test questions and answers. Actual4test can provide you with the most reliable Practical-Applications-of-Prompt exam dumps and study guide to ensure you get certification smoothly. We guarantee the high accuracy of questions and answers to help candidates pass exam with 100% pass rate.

WGU Practical Applications of Prompt QFO1 Sample Questions (Q29-Q34):

NEW QUESTION # 29

Consider the following component of an AI search tool prompt: "Find bike paths near Minneapolis." Which effective prompt component does this demonstrate?

- A. Context
- B. Persona

- C. Instructions
- D. Output format

Answer: C

Explanation:

The phrase "Find bike paths near Minneapolis" functions as the Instructions component of the prompt.

Instructions are the direct commands given to the AI, specifying the primary task that the user wants the system to perform. In any effective prompt, the instruction is the "verb" or the "action" that initiates the AI's processing. Without clear instructions, the AI may understand the subject (bike paths) and the location (Minneapolis) but may not know whether it should list them, map them, describe their history, or compare their difficulty levels.

In this specific case, the word "Find" is the directive. While "Minneapolis" provides a geographical constraint (Context), the core of the statement is the command to locate specific data. Effective prompt engineering relies on being explicit with these instructions to avoid ambiguity. For instance, a more refined instruction might be "Provide a list of..." or "Summarize the locations of..." to further clarify the desired action. However, at its most basic level, this component tells the AI exactly what operation to execute on the provided information, making it the functional heart of the prompt.

NEW QUESTION # 30

Which challenge comes with the use of generative AI for data sorting?

- A. Categorizing data based on multiple criteria
- B. Analyzing data that is text-based or unstructured
- C. Preventing training biases and inaccuracies
- D. Preventing data from becoming corrupted

Answer: C

Explanation:

A major challenge when using generative AI for data sorting and organization is preventing training biases and inaccuracies. Because generative models are trained on historical data, they often inherit the biases present in that data. If an AI is used to "sort" or "filter" job resumes, and the training data historically favored a certain demographic, the AI may subconsciously replicate that bias, even if it isn't explicitly instructed to do so.

Additionally, "hallucinations"-where the AI confidently asserts a false fact-can lead to inaccuracies during the sorting process. For example, if asked to sort a list of historical figures by "Century of Birth," the AI might incorrectly place a person in the wrong category because of a statistical error in its prediction engine.

Unlike traditional database sorting (which is purely mathematical and 100% accurate), AI-driven sorting is probabilistic. This means that users must implement "verification loops" and "grounding" techniques in their prompts to ensure that the AI's sorting logic remains objective and factually correct. Managing this "inherent unreliability" is one of the most significant hurdles in professional prompt engineering and requires constant oversight and bias-mitigation strategies.

NEW QUESTION # 31

Which key prompt component includes details about the history of a troubleshooting issue with a customer service chatbot?

- A. Persona
- B. Context
- C. Input content
- D. Instructions

Answer: B

Explanation:

Details regarding the history of a troubleshooting issue fall under the Context component of a prompt. Context is the "background information" or the "situational frame" that allows the AI to understand the "why" and

"how" of a request. Without context, the AI is essentially working in a vacuum. For a customer service chatbot, knowing the history of a problem (e.g., "The user has already tried restarting the router and clearing their cache") is essential because it prevents the AI from suggesting solutions that have already failed.

Context provides the necessary data points that ground the AI's logic in reality. While "Instructions" tell the AI to "Solve this problem," the Context provides the specific parameters of the problem itself. It acts as a set of guardrails that steer the AI toward a more relevant and personalized response. In sophisticated prompt engineering, the quality of the output is often directly proportional

to the quality of the context provided. By including historical data, user preferences, or specific environmental factors, the user ensures the AI's response is not just a generic suggestion but a targeted solution that accounts for everything that has happened up to that point.

NEW QUESTION # 32

What is the principle of ethics that is ensured by creating mechanisms to assign responsibility for AI actions and decisions?

- A. Fairness
- B. Societal impact
- C. Transparency
- **D. Accountability**

Answer: D

Explanation:

The principle of Accountability is centered on the requirement that there must be an identifiable person or entity responsible for the outcomes of an AI system's actions. As AI systems become more autonomous, the "responsibility gap" becomes a significant ethical risk. Establishing accountability means creating clear frameworks—legal, organizational, and technical—to ensure that when an AI makes a mistake (such as an incorrect medical diagnosis or a biased financial decision), there is a mechanism for recourse, explanation, and correction.

In the context of prompt engineering, accountability is often managed through "human-in-the-loop" systems.

This ensures that while the AI may generate the initial draft or decision-making logic, a human remains the ultimate authority who "signs off" on the result. Accountability also involves "Auditability"—the ability for third parties to review the AI's logs and decision-making history. Without accountability, AI deployment can lead to "organized irresponsibility," where no one takes ownership of systemic failures. By embedding accountability into the lifecycle of an AI project, organizations protect themselves and their users, ensuring that the technology serves as a tool for human progress rather than an unchecked black box.

NEW QUESTION # 33

An AI system is used to aid in an applicant selection process. The users of the system, however, have no information about which criteria are used to evaluate applicants. Which ethical concern is associated with this issue?

- A. Accountability
- B. Fairness
- C. Safety
- **D. Transparency**

Answer: D

Explanation:

This scenario highlights a critical failure in Transparency. When an AI system acts as a "gatekeeper" for life-changing opportunities—such as employment, university admissions, or bank loans—it is an ethical imperative that the criteria for selection be disclosed. If the users (the hiring managers or the applicants) do not know which variables the AI is prioritizing (e.g., years of experience, specific keywords, or even zip codes), the system is effectively a "Black Box." The lack of transparency here creates several downstream risks. First, it makes it impossible to verify if the system is actually being "Fair." If the criteria are hidden, the AI could be using proxy variables that result in illegal discrimination without anyone noticing. Second, it undermines "Accountability," as a rejected applicant has no way to challenge the decision or understand what they need to improve. In professional prompt engineering, this issue is addressed by designing prompts that require the AI to generate an

"Evaluation Report" alongside its selection, detailing which parts of the resume matched the job description.

This transforms the automated process from an opaque hurdle into a transparent, auditable tool.
