With skilled experts to edit and verify, 156-583 study materials can meet the needs for exam. In addition, you can get downloading link and password within ten minutes after payment, and you can start your practicing right now. We have online and offline chat service stuff, they possess professional knowledge for 156-583 Training Materials, if you have any questions, just contact us.

CheckPoint Check Point Certified Troubleshooting Administrator - R82 (CCTA) Sample Questions (Q70-Q75):

NEW QUESTION # 70
In fw monitor output, which inspection point represents the packet after the outbound firewall inspection but before it leaves the interface?

- A. O
- B. o
- C. I
- D. i

Answer: A

Explanation:
Lowercase o is the pre-outbound point immediately before the outbound virtual machine, while uppercase O is the post-outbound point just before the packet exits the interface. Seeing a packet at o but not at O indicates it was dropped during outbound inspection.

NEW QUESTION # 71
As a security administrator/engineer in your company, you have noticed that your HQ Check Point Security Management Server is not receiving logs from your HQ Check Point Gateway/Cluster. To investigate this issue in the command line, you will need to verify which process is running?

- A. fwd
- B. cpm
- C. fwm
- D. cpd

Answer: A

Explanation:
To troubleshoot why the Security Management Server is not receiving logs from the Security Gateway or Cluster, you should verify the status of the FWD process. The fwd daemon handles log forwarding and ensures that logs are transmitted from the gateway to the management server. Checking if fwd is running and functioning correctly is essential for resolving log transmission issues.

NEW QUESTION # 72
Which command shows the distribution of connections across CoreXL firewall instances?

- A. fw ctl affinity -l
- B. cpstat fw -f instances
- C. fw ctl multik stat
- D. fw ctl pstat

Answer: C

Explanation:
The fw ctl multik stat command lists each CoreXL firewall worker instance along with its connection count and CPU. A heavily unbalanced distribution suggests an elephant flow or a hashing problem worth investigating further.

NEW QUESTION # 73
Which command displays all identities currently learned by the Policy Decision Point?

- A. adlog a dc
- B. pep show user all
- C. pdp monitor all
- D. fw tab -t userc_users

Answer: C

Explanation:
The pdp monitor all command lists every user and machine identity the PDP currently holds, along with the acquisition source and associated groups. Comparing this with pep show user all reveals whether identities are being shared correctly to the enforcement point.

NEW QUESTION # 74
Which command lists the critical devices (pnotes) that are being monitored by ClusterXL?

- A. cphaprob -a if
- B. cphaprob list
- C. cphaconf show
- D. cphaprob syncstat

Answer: B

Explanation:
The cphaprob list command displays every registered critical device, its status, and the number of failures allowed before a failover occurs. A device reported as problematic here usually explains why a member left the Active state.

NEW QUESTION # 75
.....

CheckPoint 156-583 practice test software contains many CheckPoint 156-583 practice exam designs just like the real Check Point Certified Troubleshooting Administrator - R82 (CCTA) (156-583) exam.
