Ace Your MS-102 Exam with Microsoft's Exam Questions and Achieve Success

Our three versions of MS-102 exam braindumps are the PDF, Software and APP online and they are all in good quality. All popular official tests have been included in our MS-102 study materials. So you can have wide choices. In fact, all of the three versions of the MS-102 practice prep are outstanding. You will enjoy different learning interests under the guidance of the three versions of MS-102 training guide.

Microsoft 365 Administrator Sample Questions (Q250-Q255):

NEW QUESTION # 250

HOTSPOT

You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint site named Site1 and a data loss prevention (DLP) policy named DLP1. DLP1 contains the rules shown in the following table.

Site1 contains the files shown in the following table.

Which policy tips are shown for each file? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Rule1 tip only

File1 matches Rule1, Rule2, and Rule3.

Rule1 has the highest priority.

Note: The Priority parameter specifies a priority value for the policy that determines the order of policy processing. A lower integer value indicates a higher priority, the value 0 is the highest priority, and policies can't have the same priority value.

Box 2: Rule1 tip only

Note: User Override support

The option to override is per rule, and it overrides all of the actions in the rule (except sending a notification, which can't be overridden).

It's possible for content to match several rules in a DLP policy or several different DLP policies, but only the policy tip from the most restrictive, highest-priority rule will be shown (including policies in Test mode). For example, a policy tip from a rule that blocks access to content will be shown over a policy tip from a rule that simply sends a notification. This prevents people from seeing a cascade of policy tips.

If the policy tips in the most restrictive rule allow people to override the rule, then overriding this rule also overrides any other rules that the content matched.

NEW QUESTION # 251

You have a Microsoft 365 E5 subscription that contains the identities shown in the following table.

From the Microsoft Defender portal, you create an anti-spam inbound policy named Policy1 that has the following settings:

* Include these users, groups and domains

o Users: User3

o Groups: Group1

* Exclude these users, groups and domains

o Users: User1

Policy1 has the following Bulk email threshold & spam properties settings:

* Mark as spam

o Empty messages: On

o Object tags in HTML: On

o Sensitive words: Off

o Backscatter: On

Policy1 has the following Actions settings:

* Message actions

o Spam: Move message to Junk Email folder

o High confidence spam: Move message to Junk Email folder

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 252

You have a Microsoft 365 E5 subscription that contains the users shown in the following table.

You enable self-service password reset (SSPR) for Group1. You configure security questions as the only authentication method for SSPR.

Which users can use SSPR, and which users must answer security questions to reset their password? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION # 253

You have a Microsoft 365 subscription.

You need to configure a compliance solution that meets the following requirements:

Defines sensitive data based on existing data samples

Automatically prevents data that matches the samples from being shared externally in Microsoft SharePoint or email messages

Which two components should you configure? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A. a trainable classifier**
- B. an adaptive policy scope
- C. an insider risk policy
- **D. a data loss prevention (DLP) policy**
- E. a sensitive info type

Answer: A,D

Explanation:

A: Classifiers

This categorization method is well suited to content that isn't easily identified by either the manual or automated pattern-matching methods. This method of categorization is more about using a classifier to identify an item based on what the item is, not by elements that are in the item (pattern matching). A classifier learns how to identify a type of content by looking at hundreds of examples of the content you're interested in identifying.

Where you can use classifiers

Classifiers are available to use as a condition for:

Office auto-labeling with sensitivity labels

Auto-apply retention label policy based on a condition

Communication compliance

Sensitivity labels can use classifiers as conditions, see [Apply a sensitivity label to content automatically](#).

Data loss prevention

E: Organizations have sensitive information under their control such as financial data, proprietary data, credit card numbers, health records, or social security numbers. To help protect this sensitive data and reduce risk, they need a way to prevent their users from inappropriately sharing it with people who shouldn't have it. This practice is called data loss prevention (DLP).

NEW QUESTION # 254

Your company has a Microsoft 365 E5 tenant.

Users access resources in the tenant by using both personal and company-owned Android devices. Company policies require that the devices have a threat level of medium or lower to access Microsoft Exchange Online mailboxes.

You need to recommend a solution to identify the threat level of the devices and to control access of the devices to the resources.

What should you include in the solution for each device type? To answer, drag the appropriate components to the correct devices.

Each component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
