Even though the Platform Developer II certification boosts your career options, you have to pass the PDII Exam.

Salesforce Platform Developer II Sample Questions (Q142-Q147):

NEW QUESTION # 142

What should be added to the setup, in the location indicated, for the unit test above to create the controller extension for the test?

- A. `ApexPages.StandardController sc = new ApexPages.StandardController(acct); AccountControllerExt extension = new AccountControllerExt(sc);`
- B. `AccountControllerExt extension = new AccountControllerExt (acct);`
- C. `AccountControllerExt extension = new AccountControllerExt (acct.Id) ;`
- D. `ApexPages.Standardcontroller sc = new ApexPages. Standardcontroller (acct.Id) ; AccountControllerExt extension = new AccountControllerExt(sc) ; om`

Answer: A

Explanation:

For the unit test to create the controller extension, the correct setup is to instantiate a new `ApexPages.StandardController` with the Account record and then use it to instantiate the `AccountControllerExt`. This sets up the controller extension with the context of the provided Account record. References: Apex Developer Guide - Testing Custom Controllers and Controller Extensions

NEW QUESTION # 143

For compliance purposes, a company is required to track long-term product usage in their org. The information that they need to log will be collected from more than one object and, over time, they predict they will have hundreds of millions of records.

What should a developer use to implement this?

- A. Setup Audit Trail
- B. Field Audit Trail
- C. Big objects
- D. Field History Tracking

Answer: C

NEW QUESTION # 144

However, when the test runs, no data is returned and the assertion fails.

Which edit should the developer make to ensure the test class runs successfully?

- A. Implement the `seeAllData=true` attribute in the `@IsTest` annotation.
- B. Implement the `without sharing` keyword in the `searchFeatures` Apex class.
- C. Implement the `setFixedSearchResult=` method in the test class.
- D. Enclose the method call within `Test.startTest()` and `@Test_stopTest()`.

Answer: C

Explanation:

Implementing the `setFixedSearchResult=` method in the test class is a way to ensure that the test class runs successfully. The `setFixedSearchResult=` method is a method that can be used to specify the records to be returned by the SOSL query in the test class. The `setFixedSearchResult=` method can accept a list of record IDs as a parameter, and return those records when the SOSL query is executed. By using the `setFixedSearchResult=` method, the developer can control the data returned by the SOSL query, and avoid the dependency on the data in the org. The developer can also use the `Test.loadData` method to load the test data from a static resource, and pass the record IDs to the `setFixedSearchResult=` method. For example, the developer can use the following code to implement the `setFixedSearchResult=` method in the test class:

```
// Load test data from a static resource List<sObject> testRecords = Test.loadData(Account.sObjectType, 'testData');
// Get the record IDs List<Id> recordIds = new List<Id>(); for (sObject record : testRecords) { recordIds.add(record.Id); }
// Set the fixed search result Test.setFixedSearchResults(recordIds);
// Call the method that performs the SOSL query List<Account> results = searchFeatures.search('Acme');
// Assert the expected results System.assertEquals(testRecords.size(), results.size());
```

NEW QUESTION # 145
