## Demo CCII Test, CCII Brain Dump Free

The Certified Cyber Intelligence Investigator (CCII) (CCII) certification exam is one of the hottest and most industrial-recognized credentials that has been inspiring beginners and experienced professionals since its beginning. With the CCII certification exam successful candidates can gain a range of benefits which include career advancement, higher earning potential, industrial recognition of skills and job security, and more career personal and professional growth.

## McAfee Certified Cyber Intelligence Investigator (CCII) Sample Questions (Q88-Q93):

### NEW QUESTION # 88

Within the framework of the discipline, there are three types of intelligence of concern for the present discussion:

- (1) Law enforcement (or criminal) intelligence
- (2) Homeland Security-also known as
- (3) National Security Intelligence.

- A. True
- B. False

**Answer: A**

Explanation:

The three primary types of intelligence relevant to cyber investigations are:

Law Enforcement Intelligence- Focuses on criminal activities, fraud investigations, and cybercrime detection.

Homeland Security Intelligence- Centers around counterterrorism, cyber warfare, and securing national infrastructure.

National Security Intelligence- Encompasses strategic intelligence operations that involve state actors, cyber espionage, and military intelligence.

### NEW QUESTION # 89

Are there any laws prohibiting intelligence gathering on social networks?

- A. Some states have restrictions
- B. No laws prevent against it
- C. It is a TOS violation

**Answer: A**

Explanation:

While OSINT (Open-Source Intelligence) investigations on social networks are generally legal, some jurisdictions impose restrictions on certain methods, including:

Hacking or unauthorized access (e.g., brute-force attacks to access private profiles).

Impersonation and deception (e.g., creating fake profiles to gather intelligence).

Mass data scraping (e.g., bots collecting user data beyond allowed limits).

Several laws regulate intelligence gathering on social networks, including:

GDPR (EU)- Protects European citizens' personal data.

CCPA (California)- Gives users the right to control how their data is collected.

Computer Fraud and Abuse Act (U.S.)- Prohibits unauthorized access to digital systems.

While Terms of Service (TOS) violations can result in account suspensions or bans, they do not necessarily constitute legal violations.

However, some OSINT techniques are illegal depending on jurisdiction.

### NEW QUESTION # 90

Four types of computer-generated evidence are:

Visual output on the monitor

Printed evidence on a printer

Printed evidence on a plotter

Film recorder (to include optical drive and media).

- A. True
- B. False

**Answer: A**

Explanation:

Computer-generated evidence includes various forms of digital output, such as:

Monitor displays- Screenshots, logs, and forensic captures.

Printer output- Printed emails, reports, or logs.

Plotter-based prints- Engineering or architectural renderings used in investigations.

Film recorders and optical media- CDs, DVDs, and other storage media used for evidence recording.

Each type of evidence must be collected and preserved under forensic standards.

### NEW QUESTION # 91

It is NOT important to capture the URLs of a potential suspect's social media account.

- A. False
- B. True

**Answer: A**

Explanation:

Capturing URLs of a suspect's social media profile is critical in cyber investigations. URLs serve as unique identifiers for accounts, enabling forensic investigators to revisit, verify, and cross-check information. Without them, evidence may be lost due to profile deletions, username changes, or restrictions. Digital forensic guidelines emphasize the importance of preserving URLs for court-admissible evidence.

### NEW QUESTION # 92

What is the information often contained in a photographic image?

- A. Meta Information
- B. Photo Data

**Answer: A**

Explanation:

Metadata (EXIF Data) is embedded in digital images and provides valuable details such as:

Date and time of the photo.

Camera model and settings.

GPS coordinates of where the photo was taken.

This information is used in OSINT investigations to track locations and verify the authenticity of images.

However, criminals may remove metadata to hide their tracks.
