Answer Area

Requirement	Configuration
Maintenance technician assignment.	<input type="checkbox"/> Assign a functional location to a worker. <input type="checkbox"/> Assign a functional location to a worker. <input type="checkbox"/> Create a site financial dimension. <input type="checkbox"/> Set limit to responsible to no. <input type="checkbox"/> Set limit to responsible to yes.
Ensure maintenance for warranty schedule.	<input type="checkbox"/> Time <input type="checkbox"/> Time <input type="checkbox"/> Counter <input type="checkbox"/> Capacity load

Answer:

Explanation:

NEW QUESTION # 78

A company uses Dynamics 365 Supply Chain Management.

The marketing group needs to be able to view a manufacturer's suggested retail price (MSRP) for a new bill of materials (BOM) item when the cost of the BOM item is calculated.

You need to configure the functionality.

What should you do?

- A. Add a profit setting percentage to a calculation group.
- **B. Use the category price rules to generate a trade agreement with the sales price.**
- C. Set the sales price model field on the calculation group to item sales price.
- D. Add a profit setting percentage to the released BOM product.
- E. Add a profit setting percentage to a cost group.

Answer: B

Explanation:

* To view the manufacturer's suggested retail price (MSRP) for a new bill of materials (BOM) item, you need to configure a calculation group with a profit setting percentage. A calculation group is a group of

* settings that determine how the cost and sales price of a BOM item are calculated¹. A profit setting percentage is a percentage that is added to the cost of a BOM item to calculate the sales price². You can specify a profit setting percentage for each calculation group on the Calculation groups page³.

* When you calculate the cost and sales price of a BOM item, you must select a calculation group on the Calculations page. The calculation group determines the cost model and sales price model that are used for the BOM calculation. The cost model defines how the cost of the BOM item is calculated based on the cost categories and cost groups of the components and operations. The sales price model defines how the sales price of the BOM item is calculated based on the profit setting percentage and the cost model.

* By using a calculation group with a profit setting percentage, you can view the MSRP for a new BOM item when you calculate its cost and sales price. The MSRP will be shown as the calculated sales price on the Calculate item cost page. You can also view the calculation details and see how the profit setting percentage is applied to the cost of the BOM item.

* The other options are not correct, because they do not allow you to view the MSRP for a new BOM item when you calculate its cost. Setting the sales price model field on the calculation group to item sales price would use the existing sales price of the BOM item from the Item price page, instead of calculating a new sales price based on a profit setting percentage. Using the category price rules to generate a trade agreement with the sales price would create a trade agreement line for the BOM item based on its category, but it would not show the MSRP when you calculate its cost. Adding a profit setting percentage to the released BOM product or to a cost group would have no effect, because these entities do not affect how the sales price of a BOM item is calculated.

1: Calculation groups 2: Profit settings 3: Create or modify calculation groups : [BOM calculations] : [Cost models and sales price models] : [Calculate costs and prices for manufactured items] : [Category pricing rules]

NEW QUESTION # 79

A pharmaceutical company is implementing Dynamics 365 Supply Chain Management.

The formulas for medication include a single active ingredient. The active ingredient will be defined with a target level and specified deviation ranges from the target.

You need to set up the active ingredient items.

Which two actions must you perform? Each answer presents a partial solution.

NOTE: Each correct selection is worth one point.

- A. Configure expiry dates for a batch.
- B. Enable serial tracking.
- C. Enable batch tracking.
- D. Configure inventory batch attributes.

Answer: C,D

NEW QUESTION # 80

A company overstates on-hand raw materials due to the time it takes to post raw materials as consumed when production orders are processed.

All items used to manufacture finished goods must be consumed when a finished good is reported as finished. You must not change all bill of materials lines to use the option of flushing principal.

You need to ensure that all production orders consume raw materials at Report as finished.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

In the Production order status section of Production control, select **Report as finished**.

In the Production order status section of Production control, select **Start**.

On the Bill of materials section of Inventory management, select **Report as finished**.

Select **Make default for all users**.

In the Picking list journal, select **Always in the Automatic BOM consumption**.

Select default values in the ribbon.

Microsoft

Answer:

Explanation:

Answer Area
In the Production order status section of Production control, select Start
In the Picking list journal, select Always in the Automatic BOM consumption
In the Production order status section of Production...
Select Make default for all users

- 1 - In the Production order status section of Production control, select Start
- 2 - In the Picking list journal, select Always in the Automatic BOM consumption
- 3 - In the Production order status section of Production...
- 4 - Select Make default for all users

NEW QUESTION # 81

A beverage manufacturing company is implementing Dynamics 365 Supply Chain Management.

The company will use the batch balancing functionality to create the beverages.

IngredientA must be configured for a target value of 40 with a minimum of 35 and a maximum of 45.

IngredientB must be configured to account for target value variances.

You need to configure the ingredient-based calculations

Which ingredient type should you configure for each requirement? To answer, drag the appropriate ingredient types to the correct requirements. Each ingredient type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Ingredient types	Requirement	Ingredient type
None	 IngredientA: target value of 40 with a minimum of 35 and a maximum of 45 IngredientB: account for target value variances	
Active		
Compensating		
Filler		

Answer:

Explanation:

Ingredient types	Requirement	Ingredient type
None	 IngredientA: target value of 40 with a minimum of 35 and a maximum of 45 IngredientB: account for target value variances	Active
Active		Compensating
Compensating		
Filler
