# DP-700 Latest Exam Registration, DP-700 Detailed Study Plan

2026 Latest TopExamCollection DP-700 PDF Dumps and DP-700 Exam Engine Free Share: https://drive.google.com/open?id=1BpcrzshPnFrgAa_llw0kF0y9VtJzeMxN

A certification is not only an affirmation to your ability but also can help you enter a better company and improve your salary. DP-700 exam cram can help you get your certification successfully. We have a professional team to collect and research the latest information for the exam, and we offer you free update for 365 days after payment, so that you can obtain the latest information. In order to build up your confidence for DP-700 Exam Braindumps, we are pass guarantee and money back guarantee if you fail to pass the exam.

Microsoft DP-700 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implement and manage an analytics solution: This section of the exam measures the skills of Microsoft Data Analysts regarding configuring various workspace settings in Microsoft Fabric. It focuses on setting up Microsoft Fabric workspaces, including Spark and domain workspace configurations, as well as implementing lifecycle management and version control. One skill to be measured is creating deployment pipelines for analytics solutions.
Topic 2	• Ingest and transform data: This section of the exam measures the skills of Data Engineers that cover designing and implementing data loading patterns. It emphasizes preparing data for loading into dimensional models, handling batch and streaming data ingestion, and transforming data using various methods. A skill to be measured is applying appropriate transformation techniques to ensure data quality.
Topic 3	• Monitor and optimize an analytics solution: This section of the exam measures the skills of Data Analysts in monitoring various components of analytics solutions in Microsoft Fabric. It focuses on tracking data ingestion, transformation processes, and semantic model refreshes while configuring alerts for error resolution. One skill to be measured is identifying performance bottlenecks in analytics workflows.

DP-700 Detailed Study Plan & DP-700 Exams Training

For candidates who are going to prepare for the exam, they may need the training materials. The quality may be their first concern. DP-700 exam bootcamp of us is famous for the high-quality, and if you buy from us, you will never regret. We also pass guarantee and money back guarantee if you fail to pass the exam. In addition, we adopt international recognition third party for the payment of DP-700 Exam Dumps. Therefore, the safety of your money and account can be guarantee. Choose us, and you will never regret.

Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q53-Q58):

NEW QUESTION # 53

You have a Fabric workspace that contains a lakehouse named Lakehouse1. Data is ingested into Lakehouse1 as one flat table. The table contains the following columns.

You plan to load the data into a dimensional model and implement a star schema. From the original flat table, you create two tables named FactSales and DimProduct. You will track changes in DimProduct.

You need to prepare the data.

Which three columns should you include in the DimProduct table? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Date
- B. TransactionID
- C. ProductName
- D. ProductID
- E. ProductColor
- F. SalesAmount

Answer: C,D,E

Explanation:

In a star schema, the DimProduct table serves as a dimension table that contains descriptive attributes about products. It will provide context for the FactSales table, which contains transactional data. The following columns should be included in the DimProduct table:

ProductName: The ProductName is an important descriptive attribute of the product, which is needed for analysis and reporting in a dimensional model.

ProductColor: ProductColor is another descriptive attribute of the product. In a star schema, it makes sense to include attributes like color in the dimension table to help categorize products in the analysis.

ProductID: ProductID is the primary key for the DimProduct table, which will be used to join the FactSales table to the product dimension. It's essential for uniquely identifying each product in the model.

NEW QUESTION # 54

You need to recommend a Fabric streaming solution that will use the sources shown in the following table.

The solution must minimize development effort.

What should you include in the recommendation for each source? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:

NEW QUESTION # 55

You have an Azure SQL database named DB1.

In a Fabric workspace, you deploy an eventstream named EventStreamDBI to stream record changes from DB1 into a lakehouse.

You discover that events are NOT being propagated to EventStreamDBI.

You need to ensure that the events are propagated to EventStreamDBI.

What should you do?

- A. Enable change data capture (CDC) for DB1.
- B. Enable Extended Events for DB1.
- C. Create an Azure Stream Analytics job.
- D. Create a read-only replica of DB1.

Answer: A

NEW QUESTION # 56
You need to ensure that usage of the data in the Amazon S3 bucket meets the technical requirements.
What should you do?

- A. Create a workspace identity and enable high concurrency for the notebooks.
- B. Create a shortcut and ensure that caching is enabled for the workspace.
- C. Create a workspace identity and use the identity in a data pipeline.
- D. Create a shortcut and ensure that caching is disabled for the workspace.

Answer: D

Explanation:
To ensure that the usage of the data in the Amazon S3 bucket meets the technical requirements, we must address two key points:
Minimize egress costs associated with cross-cloud data access: Using a shortcut ensures that Fabric does not replicate the data from the S3 bucket into the lakehouse but rather provides direct access to the data in its original location. This minimizes cross-cloud data transfer and avoids additional egress costs.
Prevent saving a copy of the raw data in the lakehouses: Disabling caching ensures that the raw data is not copied or persisted in the Fabric workspace. The data is accessed on-demand directly from the Amazon S3 bucket.

NEW QUESTION # 57
You plan to process the following three datasets by using Fabric:
* Dataset1: This dataset will be added to Fabric and will have a unique primary key between the source and the destination. The unique primary key will be an integer and will start from 1 and have an increment of 1.
* Dataset2: This dataset contains semi-structured data that uses bulk data transfer. The dataset must be handled in one process between the source and the destination. The data transformation process will include the use of custom visuals to understand and work with the dataset in development mode.
* Dataset3. This dataset is in a takehouse. The data will be bulk loaded. The data transformation process will include row-based windowing functions during the loading process.
You need to identify which type of item to use for the datasets. The solution must minimize development effort and use built-in functionality, when possible. What should you identify for each dataset? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 58
......

So we are looking forward to establishing a win-win relation with you by our DP-700 training engine. In our trade with merchants of various countries, we always adhere to the principles of mutual benefits rather than focusing solely on our interests on the DP-700 Exam Questions. So our aim is to help our customers to pass the DP-700 exam as easy as possible. We have invested a lot on the compiling the content of the DP-700 study materials and want to be the best.
