As the famous saying goes, time is life. Time is so important to everyone because we have to use our limited time to do many things. Especially for candidates to take the Analytics-Admn-201 exam, time is very precious. They must grasp every minute and every second to prepare for it. From the point of view of all the candidates, our Analytics-Admn-201 Study Materials give full consideration to this problem. We can send you a link within 5 to 10 minutes after your payment.

## Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Migration &amp; Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>Installation and Configuration:</b> This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Administration:</b> This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>

## 2026 Authoritative Certification Analytics-Admn-201 Test Questions | Analytics-Admn-201 100% Free Exam Test

With this software, you can evaluate your Salesforce Analytics-Admn-201 exam preparation. The beforehand awareness of your weaknesses will help you take the Salesforce certification exam successfully. Environment you encounter during the practice test is similar to the real Salesforce Analytics-Admn-201 Exam. This feature of software will help you kill Salesforce Analytics-Admn-201 Exam anxiety.

### Salesforce Certified Tableau Server Administrator Sample Questions (Q26-Q31):

#### NEW QUESTION # 26

Which three types of data should you backup to ensure that you can restore a Tableau Server? (Choose three.)

- A. Configuration data
- B. Topology data
- C. Repository data
- D. Server secrets and Repository passwords

**Answer: A,C,D**

Explanation:

Backing up Tableau Server ensures recovery from failures or migrations. A full backup includes multiple data types-let's dissect this comprehensively:

\* Backup Components:

\* Repository Data: PostgreSQL database with metadata (users, permissions, workbooks). Backed up via tsm maintenance backup -f<filename>.tsbak.

\* Configuration Data: Server settings (e.g., ports, authentication) also in the .tsbak file.

\* Server Secrets: Encryption keys, internal tokens, Repository passwords-critical for restoring functionality.

\* Extracts: .hyper files in File Store (optional, separate backup).

\* Option A (Server secrets and Repository passwords): Correct.

\* Details: Includes encryption keys (for extracts), internal tokens (process communication), and Repository credentials. Backed up separately or stored securely (e.g., tsm security export-keys).

\* Why Critical: Without these, restored data may be inaccessible or services may fail.

\* Option C (Configuration data): Correct.

\* Details: Ports, authentication settings, process topology-part of the .tsbak file.

\* Why Critical: Restores server behavior and connectivity post-recovery.

\* Option D (Repository data): Correct.

\* Details: Core metadata database-also in .tsbak.

\* Why Critical: Without it, all content and user data is lost.

\* Option B (Topology data): Incorrect.

\* Details: Topology (process distribution) is part of configuration data in the .tsbak, not a separate entity. It's not distinctly backed up as "topology data." Why This Matters: A complete backup (secrets, config, repository) ensures full restoration-missing any piece risks an unusable server.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" ([https://help.tableau.com/current/server/en-us/backup\\_restore.htm](https://help.tableau.com/current/server/en-us/backup_restore.htm)).

### NEW QUESTION # 27

You need to ensure that Tableau Server requires the setup of a new administrator account the next time you attempt to log in. What should you do?

- A. Reinstall Tableau Server
- B. Run the tsm register command
- C. Run the tsm reset command
- D. Edit tabsvc.yml

**Answer: C**

Explanation:

To force Tableau Server to require the setup of a new administrator account (e.g., resetting the server to an initial setup state), the tsm reset command is the appropriate tool. This command resets Tableau Server's administrative configuration, including the TSM administrator account, while preserving content like workbooks and data sources.

Option B (Run the tsm register command): Correct. Running tsm reset clears the current TSM administrator credentials and configuration settings. The next time you access TSM (e.g., via the web interface or CLI), it prompts you to set up a new administrator account, mimicking the initial setup process. Command: tsm reset -- username <new-username> --password <new-password>.

Option A (Edit tabsvc.yml): Incorrect. The tabsvc.yml file contains service configuration data, but manually editing it is not supported or recommended for resetting the administrator account. It could also corrupt the installation.

Option C (Run the tsm register command): Incorrect. The tsm register command is used to register Tableau Server with a new product key or identity store, not to reset the administrator account.

Option D (Reinstall Tableau Server): Incorrect. Reinstallation wipes the entire server, including content, and is overkill for this task. The tsm reset command achieves the goal without data loss.

Reference: Tableau Server Documentation - "TSM Reset Command" ([https://help.tableau.com/current/server/en-us/cli\\_reset.htm](https://help.tableau.com/current/server/en-us/cli_reset.htm)).

### NEW QUESTION # 28

What account should you use to run the Tableau Server installation program?

- A. An NT AUTHORITY\NetworkService account
- B. A local user account
- C. An account in the local administrator group
- D. A domain user account

**Answer: C**

Explanation:

Installing Tableau Server on Windows requires an account with sufficient privileges to configure services, write to the file system, and manage registry settings. Let's analyze this in depth:

\* Installation Requirements:

\* The installer creates services (e.g., Tableau Server Gateway), writes to Program Files and ProgramData, and configures TSM.

\* It needs local administrative privileges on the machine to perform these tasks.

\* Post-install, a "Run As" account can be set for services (e.g., NT AUTHORITY\NetworkService), but this is separate from the install account.

\* Option C (An account in the local administrator group): Correct.

\* Why: The account must be in the local Administrators group to:

\* Install software (UAC elevation).

\* Configure services and ports.

\* Write to protected directories (e.g., C:\Program Files\Tableau).

\* Examples: A local admin (e.g., Administrator) or a domain user added to the Administrators group (e.g., DOMAIN\AdminUser).

- \* Process: Log in as this account, run the installer, and provide TSM admin credentials during setup.
- \* Option A (A local user account): Incorrect.
- \* A standard local user (not in Administrators) lacks permissions-installation would fail with "Access Denied" errors.
- \* Option B (A domain user account): Incorrect unless clarified.
- \* A domain user without local admin rights can't install. If it's in the Administrators group, it qualifies, but C is more specific.
- \* Option D (NT AUTHORITY\NetworkService): Incorrect.
- \* This is a built-in service account for running services (default "Run As" post-install), not for executing the installer-an interactive user account is required.

Why This Matters: Using the right account prevents install failures and ensures secure configuration- critical for production setups.  
 Reference: Tableau Server Documentation - "Install and Configure Tableau Server" ([https://help.tableau.com/current/server/en-us/install\\_config.htm](https://help.tableau.com/current/server/en-us/install_config.htm)).

### NEW QUESTION # 29

What type of information is stored in the tsm maintenance backup -f<filename>.tsbak command?

- A. Topology data
- **B. Repository data**
- C. Notification settings
- D. SMTP server settings

**Answer: B**

Explanation:

The tsm maintenance backup command creates a backup file (with a .tsbak extension) that captures critical data needed to restore Tableau Server in case of failure or migration. This backup primarily includes:

Repository data: This encompasses the PostgreSQL database, which stores metadata such as workbooks, data sources, user information, permissions, schedules, and subscriptions.

Configuration data: This includes server settings like authentication methods, port configurations, and service layouts, but it does not include topology data as a separate entity (topology is part of the configuration).

The command does not back up the following:

Extract files (stored in the File Store), which must be backed up separately if needed.

Log files, which are archived using tsm maintenance ziplogs.

Option A (Notification settings) is incorrect because while notification settings are part of the configuration data stored in the repository, they are not the primary focus of the backup. The broader category is "repository data." Option B (SMTP server settings) is also incorrect for the same reason-SMTP settings are configuration data within the repository, but the backup is not limited to just these settings.

Option D (Topology data) is incorrect because topology data (e.g., how services are distributed across nodes) is part of the configuration included in the backup, but it's not stored as a standalone item. The .tsbak file is centered on the repository database.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" ([https://help.tableau.com/current/server/en-us/backup\\_restore.htm](https://help.tableau.com/current/server/en-us/backup_restore.htm)).

### NEW QUESTION # 30

A user receives an error after attempting to run an extract refresh on the Tableau Server. What should you review to identify the cause of the problem?

- A. The UNC path to the extract's data source
- B. The status of the Background process, as shown by the tsm status -v command
- C. Whether the project permissions are set to Locked to the project
- **D. The Background Tasks for Extracts administrative view on the site status page**

**Answer: D**

Explanation:

When an extract refresh fails on Tableau Server, troubleshooting requires identifying the root cause-e.g., connectivity issues, resource constraints, or configuration errors. The Background process handles extract refreshes, so it's a key focus, but the best diagnostic tool depends on granularity and context. Let's explore this thoroughly:

\* Extract Refresh Process:

\* An extract refresh pulls data from a source (e.g., database, file) into a .hyper file stored on Tableau Server.

- \* The Backgrounder executes these tasks based on schedules or manual triggers.
  - \* Errors could stem from: database connectivity, credentials, file access, resource overload, or task misconfiguration.
  - \* Option B (Background Tasks for Extracts administrative view): Correct. This is the most direct and detailed method:
  - \* Location: In the Tableau Server web UI, go to Server > Status > Background Tasks for Extracts (or site-specific under Site > Status).
  - \* Details Provided:
    - \* Task name, schedule, and workbook/data source.
    - \* Start/end times and status (e.g., Failed, Success).
    - \* Error messages (e.g., "Cannot connect to database," "Permission denied").
    - \* Why It's Best: It pinpoints the exact failure (e.g., "timeout," "invalid credentials") for the specific refresh, offering actionable insights without needing to dig through logs manually. Server or site administrators can access this view to diagnose issues quickly.
    - \* Example: If the error is "Database login failed," you'd check credentials in the data source settings next.
  - \* Option A (Status of the Backgrounder process via tsm status -v): Partially useful but insufficient:
    - \* What It Shows: Running/stopped status of all processes (e.g., "Backgrounder: RUNNING").
    - \* Limitation: It confirms if Backgrounder is operational but doesn't reveal why a specific task failed-no error details or task-level granularity.
    - \* Use Case: If Backgrounder is stopped or crashed, this might indicate a broader issue, but the question implies a single refresh error, not a server-wide failure.
  - \* Option C (The UNC path to the extract's data source): Relevant but secondary:
    - \* Context: If the data source is a file (e.g., CSV on a network share), the UNC path (e.g., \\server\share\file.csv) must be accessible.
    - \* Why Not First: The error could be unrelated (e.g., database issue, not file-based). The admin view (B) would reveal if it's a path issue first, guiding you to check the UNC path only if indicated (e.g., "File not found").
    - \* Practical Note: Backgrounder needs share permissions and the Run As account must access it- checking this without context wastes time.
  - \* Option D (Whether project permissions are set to Locked): Unlikely cause:
    - \* Permissions Impact: Locked permissions restrict who can edit/view content, not whether an extract refresh runs-that's tied to the data source's connection settings and Backgrounder execution.
    - \* Exception: If the refresh user lacks "Connect" permission to the data source, it might fail, but this is rare (owner/schedule typically has access). The admin view would flag this.
- Why This Matters: The Background Tasks view is Tableau's purpose-built tool for extract diagnostics, saving time and reducing guesswork in production environments.
- Reference: Tableau Server Documentation - "Administrative Views: Background Tasks for Extracts" ([https://help.tableau.com/current/server/en-us/adminview\\_background\\_tasks.htm](https://help.tableau.com/current/server/en-us/adminview_background_tasks.htm)).

## NEW QUESTION # 31

.....

You will feel convenient if you buy our product not only because our Analytics-Admn-201 exam prep is of high pass rate but also our service is also perfect. What's more, our update can provide the latest and most useful Analytics-Admn-201 exam guide to you, in order to help you learn more and master more. We provide great customer service before and after the sale and different versions for you to choose, you can download our free demo to check the quality of our Analytics-Admn-201 Guide Torrent before you make your purchase. You will never be disappointed for buying our Analytics-Admn-201 exam questions.
