Stop hesitating. If you want to experience our CTFL-AT exam dumps, hurry to click [Dumpcollection.com](https://Dumpcollection.com) to try our pdf real questions and answers. You can free download a part of the dumps. Before you make a decision to buy Dumpcollection exam questions and answers, you can visit Dumpcollection to know more details so that it can make you understand the website better. In addition, about FULL REFUND policy that you fail the CTFL-AT Exam, you can understand that information in advance. Dumpcollection.com is the website which absolutely guarantees your interests and can imagine ourselves to be in your position.

## ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q20-Q25):

### NEW QUESTION # 20

Which statement about an Agile task board is CORRECT?

- A. It provides detailed visual representation of the whole team's status.
- B. It is a detailed visual representation of the status of testing.
- C. It is updated once at the end of each iteration.
- D. Only "in progress" tasks are shown on the task board.

**Answer: A**

### NEW QUESTION # 21

You are working in a software development company which, for many years, used a sequential development model and was organized into separate departments for each functional group (e.g. business analysts, developers, testers) located within their own office space. Your organization has recently changed to a SCRUM agile framework. Which of the following is an important organizational and behavioral best practice for a tester in the SCRUM team that should have also been practiced when using the sequential model?

- A. Cross-functional teamwork means that all team members contribute to testing in various ways. For example, involving people with the test strategy, test planning and execution as well as test reporting.
- B. Credibility means that the tester must share information with the stakeholders about the test process so that they find the selected test strategy and testing activities trustworthy.
- C. Co-located teamwork means that all team members, including developers and testers, must sit together in the same office, so they can quickly communicate face-to-face.
- D. Resilient testing means that the testing process is capable of dealing with rapid changes throughout the development process with test plans being updated during each iteration.

**Answer: A**

Explanation:

Cross-functional teamwork is an important organizational and behavioral best practice for a tester in the SCRUM team that should have also been practiced when using the sequential model. Cross-functional teamwork means that all team members, regardless of their functional roles, collaborate and share their skills and knowledge to achieve a common goal. In the context of testing, this means that testing is not seen as a separate activity or phase, but as an integral part of the development process. All team members contribute to testing in various ways, such as:

\* Involving people with the test strategy, test planning and execution as well as test reporting. This can help ensure that the testing activities are aligned with the business objectives, the user needs, and the technical requirements. It can also help improve the test coverage, the test quality, and the test efficiency.

\* Sharing the responsibility for testing among the team members. This can help reduce the workload and the dependency on a single tester or a testing team. It can also help increase the feedback and the communication among the team members, and foster a culture of quality and learning.

\* Leveraging the diverse skills and perspectives of the team members. This can help enhance the test design and the test execution by applying different techniques, tools, and approaches. It can also help identify and address the risks, the issues, and the opportunities for improvement from various angles. ### NEW QUESTION # 22

Iteration planning for Sprint 5 of your current project is complete. The plan for the sprint is to increase performance of the system,

which of the following acceptance criteria would you expect for Sprint 5?

- 1) User access for all roles has been validated.
- 2) A static analysis tool has been executed for all code.
- 3) 100% of the existing regression test suite has passed.
- 4) System is responding in less than 3 seconds, 90% of the time.
- 5) A new version of internet Explorer has been included.

- A. 3, 4
- B. 4, 5
- C. 2, 5
- D. 1, 3

**Answer: A**

Explanation:

Explanation

The acceptance criteria for a sprint are the conditions that must be met for the user stories to be considered done and deliver value to the customer<sup>1</sup>. The acceptance criteria should be specific, measurable, achievable, relevant, and testable<sup>2</sup>. In this case, the plan for the sprint is to increase performance of the system, so the acceptance criteria should reflect that goal. Therefore, the acceptance criteria that would be expected for Sprint

5 are:

100% of the existing regression test suite has passed. This criterion ensures that the system has not introduced any new defects or broken any existing functionality while improving performance<sup>3</sup>.

System is responding in less than 3 seconds, 90% of the time. This criterion defines a clear and quantifiable performance target that can be verified by testing<sup>4</sup>.

The other options are not relevant or appropriate acceptance criteria for Sprint 5:

User access for all roles has been validated. This criterion is not related to the performance of the system, but rather to the security or functionality of the system. It might be an acceptance criterion for a different sprint or user story, but not for Sprint 5.

A static analysis tool has been executed for all code. This criterion is not a customer

#### NEW QUESTION # 23

Which of the following describes the frequency with which usually all changes made to the software are merged and all changed components are integrated regularly in a continuous integration process?

- A. At least once a month
- B. At least once per iteration
- C. At least once a week
- D. At least once a day

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the CTFL-AT Syllabus v4.0, Section 4.2 Continuous Integration, it states:

"Continuous integration involves integrating code into a shared repository several times a day. Each integration is verified by an automated build and automated tests." Hence, Option D - at least once a day - correctly reflects best practice in continuous integration.

\* Option A (once per iteration) and B, C are far too infrequent to meet the goals of CI.

\* The objective is to detect integration issues early and often, which is only achievable through daily (or more frequent) integrations.

References:

CTFL-AT Syllabus v4.0, Section 4.2

Learning Objective (K2) - Understand frequency and purpose of continuous integration

#### NEW QUESTION # 24

Which of the following statements would you expect to be the MOST direct advantage of the whole-team approach?

- A. Having at least once a day an automated build and test process that detects integration errors early and quickly.
- B. Reducing the involvement of business representatives because of the increased communication and collaboration between testers and developers.
- C. Avoiding requirements misunderstandings which may not have been detected until later in the development cycle when they

are more expensive to fix.

- **D. Capitalizing on the combined skills of business representatives, testers and developers working together to contribute to project success.**

**Answer: D**

Explanation:

Explanation

The whole-team approach is a principle of agile testing that involves everyone with different knowledge and skills to ensure project success. The whole-team approach means that the business representatives, testers, and developers work together in every step of the development process, from planning to delivery. The whole-team approach aims to enhance communication and collaboration within the team, leverage the various skill sets of the team members, and make quality everyone's responsibility<sup>12</sup>. Therefore, the statement C is the most direct advantage of the whole-team approach, as it captures the essence of the principle and its benefits.

The other statements are not directly related to the whole-team approach, or are incorrect. Statement A is about continuous integration, which is a practice of agile development that involves having at least once a day an automated build and test process that detects integration errors early and quickly. Continuous integration is not a direct consequence of the whole-team approach, although it may be facilitated by it<sup>13</sup>. Statement B is about avoiding requirements misunderstandings, which may be a benefit of the whole-team approach, but not the most direct one. The whole-team approach does not only focus on requirements, but also on design, implementation, testing, and delivery. Moreover, avoiding requirements misunderstandings may also depend on other factors, such as the quality of the user stories, the use of acceptance criteria, and the feedback from the customers and users<sup>14</sup>. Statement D is incorrect, as it contradicts the whole-team approach. The whole-team approach does not reduce the involvement of business representatives, but rather increases it.

Business representatives are an integral part of the whole-team approach, as they provide the vision, the value, and the validation of the product. They collaborate with the testers and developers to define the features, prioritize the backlog, and verify the outcomes<sup>12</sup>. References: ISTQB Foundation Level Agile Tester Syllabus<sup>1</sup>, Section 1.2.1, page 9; What is Whole Team Approach in Agile Testing?<sup>2</sup>, Section What is Whole Team Approach?; Continuous Integration<sup>3</sup>, Section What is Continuous Integration?; Effective User Stories -

3C's and INVEST Guide<sup>4</sup>, Section The 3 C's (Card, Conversation, Confirmation) of User Stories.

## NEW QUESTION # 25

.....

We now live in a world which needs the talents who can combine the practical abilities and knowledge to apply their knowledge into the practical working conditions. To prove that you are that kind of talents you must boost some authorized and useful certificate and the test CTFL-AT certificate is one kind of these certificate. Most important of all, as long as we have compiled a new version of the CTFL-AT Exam Questions, we will send the latest version of our CTFL-AT exam questions to our customers for free during the whole year after purchasing. Our product can improve your stocks of knowledge and your abilities in some area and help you gain the success in your career.
