最新C-ACDET-2506題庫，C-ACDET-2506考試

VCESoft提供的培訓資料和正式的考試內容是非常接近的。你經過我們短期的特殊培訓可以很快的掌握IT專業知識，為你參加考試做好準備。我們承諾將盡力幫助你通過SAP C-ACDET-2506 認證考試。

SAP C-ACDET-2506 考試大綱：

主題	簡介
主題 1	• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

主題 2	• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
主題 3	• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

最新的 SAP Certified Associate C-ACDET-2506 免費考試真題 (Q54-Q59):

問題 #54

How can you define default values on fields?

- A. Set only for Constant values
- **B. Set as Constants or Expressions based on other field values**
- C. Default values must be manually entered by the user
- D. Default values are not permitted

答案: B

解題說明:

SAP Ariba allows you to define default values for fields either as static Constants or as dynamic Expressions based on other field values. Expressions use the Ariba expression language, supporting logical comparisons and operators to calculate defaults dynamically during data entry. This enables tailored defaulting logic that adapts to form context or user input. Default values are applied automatically by the system; users do not have to enter them manually unless they override the defaults. This flexibility improves data accuracy and user experience.

問題 #55

How do you format the Help Tip for a field?

- A. Select Field Configuration and edit the field. In the Help Tip, you can format the text by using the mouse to highlight the text and then right-clicking to access formatting options.
- **B. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can add standard HTML tags for formatting**
- C. Select Field Configuration and edit the field. In the Help Tip, you can only use plain text without any formatting options.
- D. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can format the text by selecting the string and use regular keyboard controls such as Ctrl-l, Ctrl-b

答案: B

問題 #56

Which of the following languages is used to define defaults on fields within SAP Ariba?

- A. JavaScript
- **B. Ariba expression language**
- C. ABAP
- D. Python

答案: B

解題說明:

SAP Ariba uses its proprietary Ariba expression language, based on OGNL (Object-Graph Navigation Language), to define default

value expressions on fields. This language supports logical conditions, comparisons, and public Java method calls to create dynamic defaulting logic. ABAP, Python, and JavaScript are not supported languages for field default expressions in SAP Ariba. This expression language provides a concise and powerful way to tailor defaults based on context.

問題 #57

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? (Select 3 correct answers)

- A. Publish the form template within the test site in order to add the form fields in the package.
- B. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- C. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.
- D. Make sure you update the string resource files in the production site before migrating the corresponding configurations from test to production site.
- E. Discard any other packages that appear in My Action Items.

答案： B,C,D

解題說明：

When migrating field configurations in SAP Ariba, it's essential to prepare all dependent components to avoid migration errors.

* Enumerations (B): These must be imported into Production before migrating fields that reference them, since the fields depend on the enumerated values to validate configurations.

* String Resource Files (C): These contain translations and label customizations. They should be uploaded and updated in Production first to ensure that migrated fields have the proper localized text.

* Flex Master Data (E): Since fields referencing FMD templates rely on these data structures, the templates and their associated data must exist in Production before migrating the fields that depend on them. Discarding unrelated packages (A) or publishing form templates (D) is unrelated or unnecessary for field migration workflows; fields and forms are handled separately. SAP best practices emphasize preparing all referenced master data and resource files to ensure smooth and error-free field migration.

問題 #58

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. Subsequent migration activities follow Bluefield deployment scenario.
- B. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- C. Subsequent migration activities will require a complete reconfiguration of existing solutions.
- D. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.

答案： B

問題 #59
