Latest NIOS-DDI-Expert Exam Cram & NIOS-DDI-Expert Reliable Exam Blueprint

DumpsReview guarantees that if you use the product, you will pass the exam on your first try. Its primary goal is to save students time and money, not just conduct a business transaction. Candidates can take advantage of the free trials to evaluate the quality and standard of the NIOS-DDI-Expert Dumps before making a purchase. With the right Infoblox Qualified NIOS DDI Expert - INE (NIOS-DDI-Expert) study material and support team passing the examination at first attempt is an achievable goal.

Infoblox Qualified NIOS DDI Expert - INE Sample Questions (Q39-Q44):

NEW QUESTION # 39

What can an administrator do with an Option Filter in NIOS?

- A. Match on any DHCP options provided by the server
- B. Match only vendor-specific options such as Option 60
- **C. Match on any DHCP options provided by the client**
- D. Match only on device types

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation: In NIOS, DHCP Option Filters allow administrators to define rules for matching DHCP client requests based on the options they send in their DHCP packets. These filters are highly flexible and can match any DHCP option provided by the client, such as Option 55 (Parameter Request List), Option 60 (Vendor Class Identifier), or custom options. This enables precise DHCP policy enforcement, like assigning specific IP ranges or options to certain devices. Option B is incorrect because filters apply to client requests, not server responses. Option C is too narrow-while Option 60 is common, filters aren't limited to vendor-specific options. Option D is vague and incorrect; device type matching is a subset of option matching. The INE course covers DHCP troubleshooting, including filter configuration. References: Infoblox NIOS Administrator Guide - DHCP Option Filters; INE Course Content: NIOS DDI DHCP Troubleshooting.

NEW QUESTION # 40

What types of permissions can be assigned to a Group or Role in NIOS? (Select all that apply.)

- A. Member permissions
- **B. Grid permissions**
- **C. Global permissions**
- **D. Object permissions**

Answer: B,C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation: NIOS uses a granular permission model for admin groups/roles (Administration > Administrators). Here's what applies:

* A (Global Permissions): Broad privileges across all objects (e.g., "All DNS Zones" read/write).

Applies to groups/roles for universal access. Correct.

* B (Object Permissions): Specific to individual objects (e.g., read-only on "zone1.example.com").

Assignable to groups/roles for fine control. Correct.

* C (Grid Permissions): Control Grid-wide settings (e.g., backup, upgrade permissions). Assignable to groups/roles, distinct from member-specific rights. Correct.

* D (Member Permissions): Permissions are tied to Grid members (e.g., restart services on "Member1"), but NIOS documentation classifies these under object or Grid permissions, not a separate "Member" category. Incorrect in this context.

* Setup: In Grid Manager, you assign these via group/role properties, selecting scopes (global, object-specific, Grid-level).

* Practical Example: In an INE lab, you'd assign a group global DNS write access and Grid backup rights, testing restricted troubleshooting scenarios. References: Infoblox NIOS Administrator Guide - Permissions; INE Course Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 41

A superuser can change the password on another admin account.

- A. False
- **B. True**

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation: In NIOS, a superuser is an admin with unrestricted permissions across the Grid, including user management. Here's the breakdown:

* Superuser Role: Defined in Grid Manager (Administration > Administrators), superusers have full read/write access to all objects and settings, including admin accounts.

* Password Change: A superuser can navigate to Administration > Administrators, select another admin account (e.g., "user1"), and modify its password, overriding any restrictions on that account.

- * Why True: This is a built-in capability to ensure ultimate control, useful for scenarios like account recovery or security enforcement. No restrictions apply to superusers for this action.
- * Practical Example: In an INE troubleshooting lab, a superuser might reset a locked-out admin's password to regain Grid access, testing authentication policies.
- * Contrast: Regular admins with limited permissions can't modify others' accounts unless explicitly granted. References: Infoblox NIOS Administrator Guide - Admin Management; INE Course Objective: NIOS DDI Grid Deployment.

NEW QUESTION # 42

If the VRID of a HA pair is configured as 25. Which MAC address is most likely used for the virtual IP address?

- A. 00-00-5E-25-01-00
- B. 00-00-5E-00-01-19
- C. 01-00-5E-7F-FF-25
- D. 19-80-C2-00-00-03

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation: VRRP defines the virtual MAC for the VIP:

* Format: 00:00:5E:00:01:XX, where XX is the VRID (1-255) in hex.

* VRID 25: Decimal 25 = Hex 19. Thus, MAC is 00:00:5E:00:01:19.

* Options:

* A: 25 is decimal, not hex - incorrect conversion. Incorrect.

* B: Correctly uses hex 19 for VRID 25. Correct.

* C: Random, non-VRRP format. Incorrect.

* D: Multicast format, not VRRP. Incorrect.

* Practical Example: In an INE lab, you'd configure VRID 25, capture VRRP packets, and verify 00:00:5E:00:01:19, troubleshooting HA. References: RFC 3768 - VRRP; Infoblox NIOS Administrator Guide - HA; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 43

What does the CLI command "reset all" do?

- A. It erases the database, network settings, and log files on the appliance
- B. It erases the appliance back to factory default
- C. It erases the database, licenses, and network settings on the appliance
- D. This is not a valid CLI command

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation: The NIOS CLI offers specific "reset" commands for appliance management, but "reset all" isn't one of them. Let's explore:

* Valid Commands:

* reset database: Clears the NIOS database (DNS, DHCP data) but keeps network settings and licenses.

* reset all licenses: Resets licensing, requiring re-registration.

* set factory: Performs a full factory reset, wiping everything (database, network, logs) to defaults.

* "reset all": This isn't documented or recognized in NIOS CLI. Typing it yields an error (e.g., "Invalid command").

* Options Analysis:

* A: Factory reset is set factory, not "reset all." Incorrect.

* B/C: No single "reset all" command combines these actions - specific resets are separate.

Incorrect.

* D: Matches the lack of this command in NIOS. Correct.

* Practical Example: In an INE lab, you'd use reset database to clear a test Grid member, but "reset all" would fail, teaching CLI precision in troubleshooting. References: Infoblox NIOS CLI Reference Guide; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 44

.....

Many clients may worry that if they buy our product they will fail in the exam but we guarantee to you that our NIOS-DDI-Expert study questions are of high quality and can help you pass the exam easily and successfully. Our product boasts 99% passing rate and high hit rate so you needn't worry that you can't pass the exam. Our NIOS-DDI-Expert exam torrent is compiled by experts and approved by experienced professionals and updated according to the development situation in the theory and the practice. Our Infoblox Qualified NIOS DDI Expert - INE guide torrent can simulate the exam and boosts the timing function. The language is easy to be understood and makes the learners have no learning obstacles. So our NIOS-DDI-Expert Exam Torrent can help you pass the exam with high possibility.
