高質量的HPE7-A01最新考古題 |第一次嘗試輕鬆學習並通過考試&可靠的HPE7-A01: Aruba Certified Campus Access Professional Exam

NewDumps是一個對HP HPE7-A01 認證考試提供針對性培訓的網站。NewDumps也是一個不僅能使你的專業知識得到提升，而且能使你一次性通過HP HPE7-A01 認證考試的網站。NewDumps提供的培訓資料是由很多IT資深專家不斷利用自己的經驗和知識研究出來的，品質很好，準確性很高。一旦你選擇了我們NewDumps，不僅能夠幫你通過HP HPE7-A01 認證考試和鞏固自己的IT專業知識，還可以享用一年的免費售後更新服務。

HPE7-A01 認證考試是一項全球認可的供應商中立認證。該認證旨在幫助網絡專業人員通過展示他們在 Aruba 網絡解決方案方面的技能和知識，獲得競爭優勢。該認證還為雇主提供了一種可靠的方法，以評估其員工在 Aruba 網絡解決方案方面的技能。

最新的 Aruba Certified Professional HPE7-A01 免費考試真題 (Q57-Q62):

問題 #57

A customer is concerned about the unprotected traffic between an AOS-CX switch and a gateway, running on AOS10. What is a feasible option to protect this traffic?

- A. Implement an IPSec tunnel to protect PAPI between the AOS-CX switches and the gateway
- B. no action is needed, an RSA certificate already encrypts the traffic
- C. Implement an MD5 HMAC function to protect PAPI between the AOS-CX switches and the gateway
- D. Implement a GRE tunnel to protect PAPI between the AOS-CX switches and the gateway

答案: A

解題說明:

According to the Aruba Documentation Portal, PAPI (Port Aggregation Protocol) is a protocol that allows multiple physical ports to be aggregated into a single logical port for increased bandwidth and performance.

PAPI can be used between AOS-CX switches and gateways, or between AOS-CX switches and other devices.

Option A: Implement an IPSec tunnel to protect PAPI between the AOS-CX switches and the gateway This is because option A shows how to implement an IPSec tunnel between two devices using the interface command and the ipsec command. An IPSec tunnel can provide encryption and authentication for PAPI traffic between two devices, such as an AOS-CX switch and a gateway2. Therefore, option A is a feasible option to protect this traffic.
I hope this helps you. If you need more information, please let me know.

問題 #58

You are doing tests in your lab and with the following equipment specifications

- * AP1 has a radio that generates a 10 dBm signal
- * AP2 has a radio that generates a 11 dBm signal
- * AP1 has an antenna with a gain of 9 dBi
- * AP2 has an antenna with a gain of 12 dBi.
- * The antenna cable for AP1 has a 2 dB loss
- * The antenna cable for AP2 has a 3 dB loss

What would be the calculated Equivalent Isotropic Radiated Power (EIRP) for APT?

- A. 30 dBm
- B. -12 dBm
- C. 17 dBm
- D. 26 dBm

答案: C

解題說明:

EIRP = Transmitter power + Antenna gain - Cable loss

EIRP for AP1 = 10 dBm + 9 dBi - 2 dB = 17 dBm

問題 #59

What is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports?

- A. Manually enable Enhanced Security Mode from a console session.
- B. Create a dedicated management VRF, and assign the management port to it.
- C. Disable all management services on the default VRF.
- D. Implement a control plane ACL to limit access to approved IPs and/or subnets

答案: B

解題說明:

This is an Aruba-recommended best practice for hardening that only applies to Aruba CX 6300 series switches with dedicated management ports. A dedicated management port is a physical port that is used exclusively for out-of-band management access to the switch. A dedicated management VRF is a virtual routing and forwarding instance that isolates the management traffic from other traffic on the switch. By creating a dedicated management VRF and assigning the management port to it, the administrator can enhance the security and performance of the management access to the switch. The other options are incorrect because they either do not apply to switches with dedicated management ports or do not follow Aruba-recommended best practices.

問題 #60

Which feature supported by SNMPv3 provides an advantage over SNMPv2c?

- A. Transport mapping
- B. Community strings
- C. GetBulk
- D. Encryption

答案: D

解題說明：

Encryption is a feature supported by SNMPv3 that provides an advantage over SNMPv2c. Encryption protects the confidentiality and integrity of SNMP messages by encrypting them with a secret key. SNMPv2c does not support encryption and relies on community strings for authentication and authorization, which are transmitted in clear text and can be easily intercepted or spoofed. Transport mapping, community strings, and GetBulk are features that are common to both SNMPv2c and SNMPv3. 問題 #61

When setting up an Aruba CX VSX pair, which information does the Inter-Switch Link Protocol configuration use in the configuration created?

- A. MAC tables
- B. UDLD
- C. QSVI
- D. RPVST+

答案：A

解題說明：

The Inter-Switch Link Protocol (ISL) is a protocol that enables the synchronization of data and state information between two VSX peer switches. The ISL uses a version control mechanism and provides backward compatibility regarding VSX synchronization capabilities. The ISL can span long distances (transceiver dependent) and supports different speeds, such as 10G, 25G, 40G, or 100G. One of the data components that the ISL synchronizes is the MAC table, which is a database that stores the MAC addresses of the devices connected to the switch and the corresponding ports or VLANs. The ISL ensures that both VSX peers have the same MAC table entries and can forward traffic to the correct destination. The ISL also synchronizes other data components, such as ARP table, LACP states for VSX LAGs, and MSTP states.
