MB-820最新日本語版参考書 & MB-820最新試験情報

PassTestのMB-820問題集は実際のMB-820認定試験と同じです。この問題集は実際試験の問題をすべて含めることができるだけでなく、問題集のソフト版はMB-820試験の雰囲気完全にシミュレートすることもできます。PassTestの問題集を利用してから、試験を受けるときに簡単に対処し、楽に高い点数を取ることができます。

Microsoft MB-820 認定試験の出題範囲:

トピック	出題範囲

トピック 1	<ul style="list-style-type: none"> Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
トピック 2	<ul style="list-style-type: none"> Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.
トピック 3	<ul style="list-style-type: none"> Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.

Microsoft Dynamics 365 Business Central Developer 認定 MB-820 試験問題 (Q52-Q57):

質問 # 52

You need to implement the Issue Management module and expose the PostIssue method.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: Note than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

□

正解:

解説:

□ Explanation:

Here is the most logical sequence of actions for implementing the Issue Management module in Business Central and exposing the PostIssue method:

Correct Order:

- * Create a codeunit named "Issue Management Impl." and set the value of Access property to Internal.
- * This is the first step because Issue Management Impl. is the implementation layer where the actual business logic resides, and setting it to Internal ensures that it is only accessible from within the module, following best practices in encapsulation.
- * Create a local procedure named PostIssueImpl in the "Issue Management Impl." codeunit.
- * This step adds the actual PostIssueImpl method, which contains the core logic of posting an issue.
- * Create a codeunit named "Issue Management" and set the value of Access property to Public.
- * After defining the implementation logic, you need to create a public-facing Issue Management codeunit to expose the service externally.
- * Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssueImpl method.
- * Lastly, expose the PostIssue method in the Issue Management codeunit, which will internally call the PostIssueImpl method, completing the chain.

質問 # 53

You create a 'Contoso Post' procedure to send an http POST request in JSON format. You publish the procedure to your environment.

You write the following procedure code:

□ The procedure does not work as expected.

You need to find and fix all errors in HTTP class usage.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

□

正解:

解説:

□ Explanation:

Statements:

- * Replace line 16 with ResponseText := ResponseMessage
- * answer: NoThe correct way to handle the response is to use ReadAs or similar methods to read the content from the response, not just assign the ResponseMessage directly to ResponseText. Hence, this statement is incorrect.

* In line 13, change the 'text/plain' value to 'application/json'

* answer: Yes Since the procedure is expected to send a POST request with JSON content, changing the content type to 'application/json' is correct. This ensures that the server understands the content is in JSON format.

* Replace line 14 with `Client.DefaultRequestHeaders.Add('Authorization', 'Bearer ' + Token);`

* answer: No In AL, the authorization headers are managed through `HttpHeaders`, and the `Client`.

`DefaultRequestHeaders` method is not available in AL. Therefore, this statement is incorrect.

* In line 10, replace `WriteFrom` with `ReadAs`

* answer: No `WriteFrom` is the correct method for sending the request content, as it writes data from the `RequestText` variable to the `HttpContent`. `ReadAs` is used for reading the response, not for writing the request content.

質問 # 54

You need to create the Install codeunit that is required in the extension used for installing or updating the Housekeeping app.

Which data type or declaration should you use? To answer, select the appropriate options in the answer area.

NOTE; Each correct selection is worth one point.

正解:

解説:

Explanation:

For the Install codeunit required for the extension used for installing or updating the Housekeeping app, you should use the following data type and declaration:

* Data type for information: `ModuleInfo`

* Start of the declaration of the method or procedure to perform the tasks: local procedure In AL language, which is used for developing extensions in Business Central, an Install codeunit is a special type of codeunit that is used to handle installation or upgrade logic for an extension.

* `ModuleInfo` is a data type that contains information about the current extension, such as its version. It is typically used within the `OnInstallAppPerCompany` or `OnUpgradePerCompany` triggers of an Install codeunit to determine if the app is being installed for the first time or upgraded.

* A local procedure within an Install codeunit is a method that is only accessible within the codeunit itself. It is not visible to other objects or extensions. This is suitable for tasks that are internal to the installation process and should not be exposed globally.

These selections align with the requirements of handling installation and update procedures in a controlled and encapsulated manner within Business Central extensions.

質問 # 55

You need to determine If you have unwanted incoming web service calls in your tenant during the last seven days.

Which two KQL queries should you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A.
- B.
- C.
- D.
- E.

正解: A、 B

解説:

The task is to identify unwanted incoming web service calls during the last seven days. To do this, we need to look at KQL (Kusto Query Language) queries that would filter out web service calls based on the timestamp (to ensure the calls are within the last seven days) and by certain characteristics that would indicate they are unwanted, such as the wrong type of protocol (SOAP in this case, as Contoso Ltd. plans to dismiss using it).

Looking at the options:

* Option A: This query selects all traces where the timestamp is within the last 7 days and where the custom dimension has a value of 'RT0008', and where the category is either 'ODataV4', 'ODataV3', or

'Ap?'. This query would show all API calls except SOAP, so it does not directly answer the question about unwanted calls.

* Option B: This query filters for traces with a timestamp within the last 7 days, where 'RT0008' is present, and specifically looks for the category 'SOAP'. This query is correct because it directly targets SOAP calls, which are the unwanted calls according to Contoso Ltd.'s plans.

* Option C: Similar to option B, this query filters for traces within the last 7 days and looks for 'RT0008' but uses the equality operator for the category 'SOAP'. This would also correctly return the unwanted SOAP calls.

* Option D: This query also filters for traces within the last 7 days, but it excludes the 'ODataV4' category, which doesn't necessarily target the unwanted SOAP calls.

* Option E: This query selects traces where the timestamp is within the last 7 days and the custom dimension has 'RT0008'.

However, it filters out categories 'ODataV4' and 'Api', which does not directly help in identifying the unwanted SOAP calls.

Therefore, the queries that should be used to determine if there are unwanted incoming web service calls (SOAP calls) in the tenant during the last seven days are Options B and C. These queries are specific to identifying SOAP protocol usage, which is what Contoso Ltd. considers unwanted.

質問 # 56

You are writing a procedure to block all inventory items with numbers that do not start with the letter S.

You need to complete the procedure.

How should you complete the code expressions? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

正解:

解説:

質問 # 57

.....

試験は簡単ではないことは広く認められていますが、この分野の労働者にとって関連するMB-820認定は非常に重要であるため、多くの労働者がこの課題に対処する必要があります。より効率的で簡単な方法で試験に合格し、関連する認定を取得する必要があります。最近の10年間で、MB-820試験問題は、国際市場での温かい歓迎と迅速な販売に対応しました。MB-820学習教材は、他のメーカーと同じくらいリーズナブルな価格であるだけでなく、次の点で明らかに優れています。
