The The Open Group OGEA-103 exam questions are designed and verified by experienced and qualified The Open Group OGEA-103 exam trainers. So you rest assured that with TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) exam dumps you can streamline your OGEA-103 exam preparation process and get confidence to pass TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam (OGEA-103) exam in first attempt.

### The Open Group TOGAF Enterprise Architecture Combined Part 1 and Part 2 Exam Sample Questions (Q137-Q142):

#### NEW QUESTION # 137

Within the Architecture Repository, what does the class of information known as the Architecture Capability include?

- A. Patterns, templates, and guidelines used to create new architectures.
- **B. Parameters, structures, and processes to support governance of the repository.**
- C. A record of the governance activity across the enterprise.
- D. The organization-specific architecture framework, including a method for architecture development and a metamodel for architecture content.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From documents:

The Architecture Repository in TOGAF provides a structured model for storing architectural output. It contains six classes of architectural information:

- \* Architecture Metamodel - defines the structure of architectural content and relationships.
- \* Architecture Capability - contains parameters, structures, and processes supporting the governance of the repository and the Architecture Board.
- \* Architecture Landscape - architectural views at different levels (Strategic, Segment, Capability).
- \* Standards Information Base (SIB) - standards to guide architecture development and solution building.
- \* Reference Library - reference materials such as patterns, templates, guidelines.
- \* Governance Log - record of governance activity, compliance assessments, waivers, and approvals.

Focusing on Architecture Capability:

- \* Defined by TOGAF as: "The parameters, structures, and processes that support governance of the Architecture Repository."
- \* It provides the framework for ensuring that the repository is managed, controlled, and aligned with the enterprise's architecture governance practices.
- \* It includes organizational roles, responsibilities, and processes that ensure architecture practices are sustainable and repeatable.

Why the other options are incorrect:

- \* B. This describes the Architecture Metamodel, not Architecture Capability.
- \* C. This describes the Governance Log, which holds the record of governance activity.
- \* D. This describes the Reference Library, which contains patterns, templates, and guidelines.

References (official TOGAF materials, no links):

- \* The Open Group, TOGAF Standard, Version 9.2, Part V: Enterprise Continuum and Tools - Architecture Repository.
- \* The Open Group, TOGAF 9 Certified Study Guide - detailed breakdown of the six classes in the Architecture Repository and their purpose.

#### NEW QUESTION # 138

Complete the sentence When considering agile development Architecture to Support Project will identify what products the Enterprise needs the boundary of the products and what constraints a product owner has. this defines the Enterprise's \_\_\_\_\_.

- A. workflow management
- **B. backlog**
- C. lifecycle economics
- D. operations

**Answer: B**

Explanation:

When considering agile development, Architecture to Support Project will identify what products the enterprise needs, the boundary

of the products, and what constraints a product owner has. This defines the enterprise's backlog. A backlog is a list of features or tasks that need to be done to deliver a product or service. It is prioritized by the product owner based on the value and urgency of each item. Reference: The TOGAF Standard | The Open Group Website, Section 3.3.5 Architecture to Support Project.

#### **NEW QUESTION # 139**

Consider the following statement.

According to the TOGAF standard, a governed approach of a particular deliverable will ensure adherence to the principles, standards, and requirements of the existing or developing architectures.

Which deliverable does this refer to?

- **A. An Architecture Contract**
- B. The Architecture Definition Document
- C. The Statement of Architecture Work
- D. The Architecture Vision

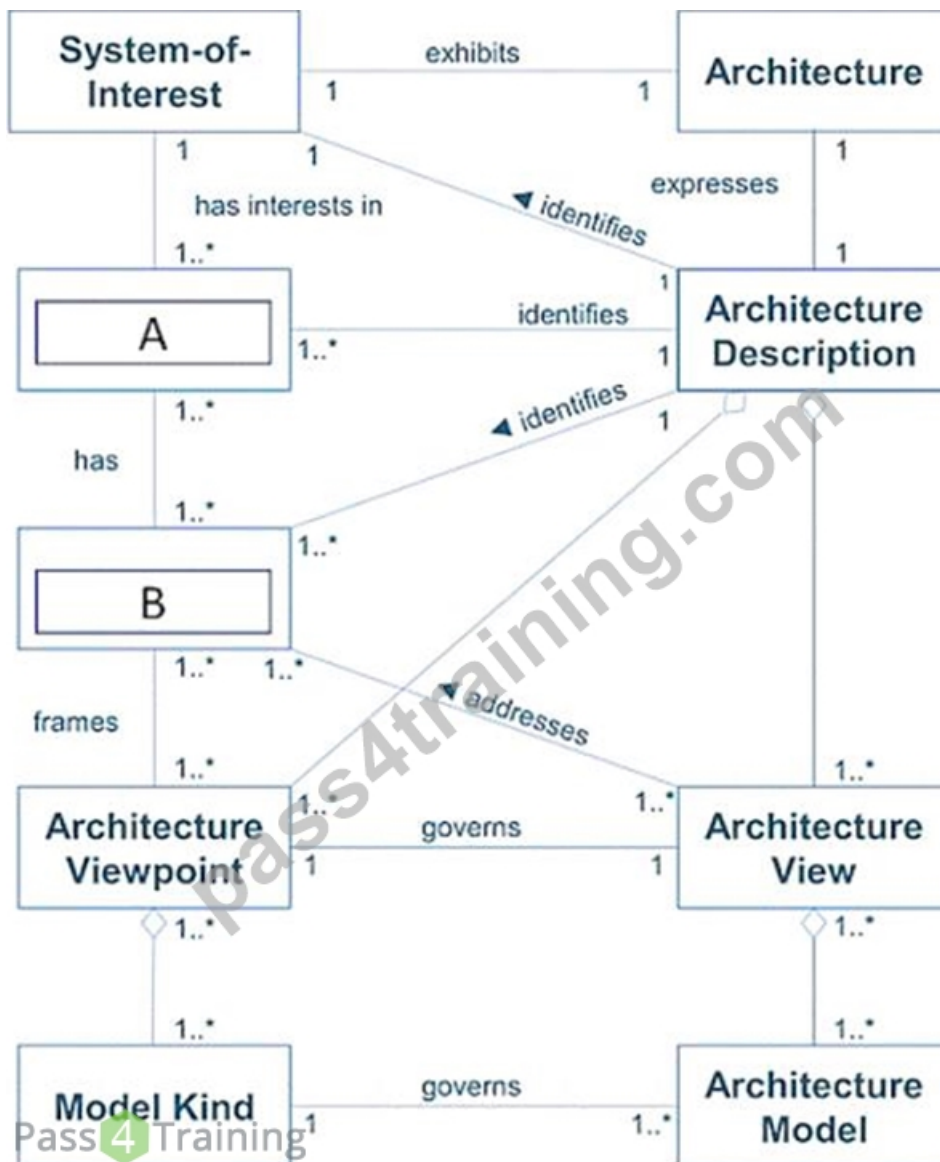

**Answer: A**

Explanation:

According to the TOGAF Standard, 10th Edition, an architecture contract is "a formal agreement between a service provider and a service consumer that defines the mutual commitments and expectations for the delivery of an architecture" 1. An architecture contract is a governed approach of a particular deliverable that will ensure adherence to the principles, standards, and requirements of the existing or developing architectures, as it specifies the roles, responsibilities, deliverables, quality criteria, and acceptance criteria for the architecture work 1. The other options are not correct, as they are not governed approaches of a particular deliverable, but rather different types of deliverables within the architecture development process. An architecture vision is "a high-level, aspirational view of the target architecture" 1. A statement of architecture work is "a document that defines the scope and approach that will be used to complete an architecture project" 1. An architecture definition document is "a document that describes the baseline and target architectures for one or more domains" 1.

#### **NEW QUESTION # 140**

Exhibit:

Consider the image showing basic architectural concepts.  
What are items A and B?

- A. A-Candidate Architecture, B-Trade-off
- B. A-User, B-Requirement
- C. A-Stakeholder, B-Concern
- D. A-Base Architecture, B-Target Architecture

**Answer: C**

Explanation:

In the context of TOGAF, a stakeholder is any individual, team, or organization who has interests in, or concerns relative to, the outcome of the architecture. Concerns are those interests which pertain to any aspect of the system's functioning, development or operation, including considerations such as performance, reliability, and security<sup>1</sup>. \*The TOGAF Standard, Version 9.2 - Definitions - The Open Group

#### NEW QUESTION # 141

Complete the sentence: The purpose of the Preliminary Phase is to develop the:

- A. Implementation Governance Model

- B. Architecture Roadmap
- **C. Organization Model for Enterprise Architecture**
- D. Architecture Vision for the project

**Answer: C**

Explanation:

Comprehensive and Detailed In-Depth Explanation from Expert in Enterprise Architecture, guiding in TOGAF and ArchiMate: In the TOGAF Architecture Development Method (ADM), the Preliminary Phase is a foundational phase whose primary purpose is to establish and prepare the Architecture Capability within the enterprise. This phase ensures that the organization is structurally, procedurally, and culturally ready to undertake architecture work in a consistent and governed manner.

A core outcome of this phase is the Organization Model for Enterprise Architecture, which defines:

Architecture roles and responsibilities (e.g., Chief Architect, Domain Architects) Reporting and decision-making structures Architecture governance bodies (such as Architecture Boards) Interaction with other governance and management processes Accountability and ownership for architecture activities The Organization Model enables repeatable, controlled, and effective execution of the ADM across initiatives. Without this model, architecture work would lack authority, consistency, and governance alignment.

Why Option A is correct:

The Preliminary Phase explicitly focuses on defining and establishing the Organizational Model for Enterprise Architecture as part of building the enterprise's Architecture Capability.

Why the other options are incorrect:

B . Architecture Roadmap: This is developed later in the ADM when solution options, work packages, and migration paths are defined, mainly in Phases E (Opportunities & Solutions) and F (Migration Planning).

C . Implementation Governance Model: This is primarily addressed in Phase G (Implementation Governance), where architecture compliance and realization are governed.

D . Architecture Vision for the project: The Architecture Vision is the main deliverable of Phase A (Architecture Vision), which follows the Preliminary Phase.

Authoritative

Reference (TOGAF Standard):

TOGAF ADM - Preliminary Phase: Objectives and Key Activities

TOGAF Architecture Capability Framework

TOGAF Architecture Governance concepts

These sources clearly state that the Preliminary Phase exists to define and establish the Organizational Model for Enterprise Architecture, making Option A the correct and fully aligned answer.

## NEW QUESTION # 142
