NEW QUESTION # 120

開発者が Apex コールアウトを使用する必要があるシナリオはどれですか
アウトバウンドメッセージングの代わりに？

- A. コールアウトは非同期である必要があります。
- B. コールアウトはフローから呼び出す必要があります。
- C. ターゲットシステムは SCAP API を使用します。
- D. ターゲットシステムは REST API を使用します。

Answer: D

Explanation:

Outbound Messaging in Salesforce provides a way to send notifications from Salesforce to external applications using SOAP-based web service calls. However, when the target system requires interactions with RESTful web services, a developer must use an Apex callout. This is because Outbound Messaging is limited to SOAP and cannot directly interact with REST APIs. Apex callouts provide the flexibility to make HTTP requests to REST endpoints, thus allowing developers to programmatically interact with virtually any web service provided by external systems.

NEW QUESTION # 122

開発者はテストの失敗をサンドボックスで確認しますが、本番環境では確認しません。サンドボックスの作成以来、どちらの環境にもコードやメタデータの変更は積極的に加えられていません。問題を解決するにはどの考慮事項を確認する必要がありますか？

- A. Apex クラスが同じ API バージョンであることを確認します。
- B. テスト クラスが `SeeAllData=true` を使用していることを確認します。
- C. サンドボックスが運用環境と同じリリースであることを確認してください。
- D. [並列 Apex テストを無効にする] がオフになっていることを確認します。

Answer: C

Explanation:

If test failures are occurring in a sandbox but not in production and there have been no active code or metadata changes, it could be due to differences in the Salesforce release versions between the two environments.

Sandboxes can be on preview instances which get upgraded to new releases before production instances. This can lead to differences in behavior and could affect test executions. Ensuring that both the sandbox and production are on the same release can resolve such issues. API version differences and parallel testing settings typically do not cause discrepancies if the code hasn't changed, and while using `SeeAllData=true` is generally not recommended due to its dependence on the organization's data, it's unlikely to be the cause if the issue is related to the environment rather than the data.
