Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q57-Q62):

NEW QUESTION # 57
Which two cloud computing services are vendor-managed in an Infrastructure as a Service (IaaS) delivery model? (Choose two.)

- A. Networking
- B. Data
- C. Operating System
- D. Applications
- E. Storage

Answer: A,E

Explanation:
In the Infrastructure as a Service (IaaS) model, the cloud provider is responsible for managing and maintaining the underlying infrastructure components, including:
* Networking: The cloud provider handles all aspects of network configuration, hardware, and virtual networking.
* Storage: The cloud provider supplies and manages the physical and virtual storage infrastructure required to support the consumer's data needs.
The customer is responsible for managing:
* Operating Systems
* Applications
* Data
This model offers flexibility while shifting infrastructure maintenance responsibilities to the service provider.

NEW QUESTION # 58
Which action must be taken when editing a captured configuration of an old device for reuse in a replacement device?

- A. Retain all username entries.
- B. Add the enable password cisco command.
- C. Keep all access-list commands intact.
- D. Remove all configurations under line vty 0 4.

Answer: A

Explanation:
Within theFLDTECtraining, especially underMaintenance and RMA Procedures, there is a strong emphasis on safely transferring and adapting configurations from failed or decommissioned devices to replacement units.
The official guidance includes the following:
"When reusing a configuration from an old device, make sure to retain the necessary security elements such as username entries. This ensures the replacement device is still accessible under the correct user credentials." Here's a breakdown of why the correct answer isB:
* A. Remove all configurations under line vty 0 4:This would eliminate remote access settings, making it harder to manage the device.
* B. Retain all username entries:Correct. Keeping the username entries ensures continued secure access and avoids loss of administrative control.
* C. Keep all access-list commands intact:Not always required - ACLs are often tailored to interface- specific settings or environments which may differ between devices.
* D. Add the enable password cisco command:Not a best practice. Default passwords (like cisco) should be avoided for security reasons, and it's not required if enable secret is already in use.

NEW QUESTION # 59
What must be considered when installing a new fan module in a fixed-configuration Cisco Nexus switch?

- A. The airflow direction must be consistent with other installed modules.
- B. The fan module must be from the same manufacturing batch as the others.
- C. Fan modules can be installed only when the switch is powered off
- D. The size of the fan module must match the power supply.

Answer: A

Explanation:
When installing a fan module in a Cisco Nexus fixed-configuration switch, it's crucial to ensure that the airflowdirection of the new fan matches the existing airflow configuration. Mismatched airflow directions can lead to inefficient cooling or even overheating of components, potentially affecting the performance or lifespan of the switch.
Cisco offers fan modules infront-to-backorback-to-frontairflow variants, and consistency is required for proper thermal management. These modules are also typically hot-swappable, meaning powering down the switch is not necessary.

NEW QUESTION # 60
Drag and drop the TFTP statements from the left onto the corresponding categories on the right.

Answer:

Explanation:

Explanation:
The FLDTEC course teaches thatTFTPis a lightweight file transfer protocol often used in Cisco devices for transferring configuration files or IOS images, especially in environments where simplicity is more critical than security:
* Advantages:
* It has alightweight footprint, making it easy touse and configure.
* Useful fortransferring small filessuch as backup configs or small IOS images.
* Disadvantages:
* Lacks encryption anddoes not support authentication, making itinsecurefor sensitive or production environments.
* Not efficientfor large file transfers due to its limited feature set and reliance on UDP (User Datagram Protocol).
This makes TFTP a good fit fortrusted internal networkswhere simplicity is preferred over robust security.

NEW QUESTION # 61
Which command is used to download a copied configuration file from a TFTP server to merge it with the running configuration of a replacement Cisco device?

- A. merge tftp: running-config

- B. load tftp: running-config
- C. copy tftp: startup-config
- D. copy tftp: running-config

Answer: D

Explanation:
The commandcopy tftp: running-configis used to retrieve a configuration file from a TFTP server and merge it with the current running configuration of a Cisco device. Thisoperation is additive, meaning it integrates the new configuration commands into the existing running configuration without removing any pre-existing commands unless explicitly overridden.
This method is particularly useful when restoring configurations to a replacement device, as it allows for the seamless integration of necessary settings without disrupting the current operational state.
In contrast, usingcopy tftp: startup-configwould overwrite the startup configuration file, which could lead to unintended consequences upon the next device reload. The optionsload tftp: running-configandmerge tftp:
running-configare not valid Cisco IOS commands.
