Fortinet FCSS_NST_SE-7.4 Exam Syllabus Topics:

Topic	Details
Topic 1	Security Profiles: This segment of the exam tests the skills of IT professionals, such as network administrators in handling and troubleshooting security profile-related challenges.
Topic 2	VPN: This section tests the knowledge of IT professionals, such as system engineers in diagnosing and resolving VPN-related issues. It emphasizes troubleshooting IPsec IKE versions 1 and 2 to ensure secure and reliable communication between networks or remote users.
Topic 3	Routing: This part of the exam examines the expertise of Fortinet network and security professionals, in routing enterprise traffic effectively.

Topic 4	System Troubleshooting: This part of the exam assesses the ability of Fortinet network and security professionals to diagnose and fix typical system-related problems within Fortinet solutions. It involves troubleshooting FortiGate-to-FortiGate Security Fabric issues, addressing automation stitch concerns, and detecting resource-related problems using integrated tools.
Topic 5	Authentication: This section evaluates the proficiency of Fortinet network and security professionals in resolving both local and remote authentication issues.

Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q14-Q19):

NEW QUESTION # 14

Refer to the exhibit, which shows the port1 interface configuration on FortiGate and partial session information for ICMP traffic.

```
config system interface
  edit "port1"
    set preserve-session-route enable
  next
end

# diagnose sys session list
session info: proto=1 proto_state=00 duration=4 expire=55 timeout=0 refresh_dir=both flags=00000000 socktype=0 sockport=0 av_idx=0 use=3
state=log may_dirty npu f00 route_preserve
origin->sink: org pre->post, reply pre->post dev=7->19/19->7 gw=100.64.1.1/10.0.1.101

# diagnose netlink interface list | grep index=19
if=port1 family=00 type=768 index=19 mtu=1420 link=0 master=0
```

What happens to the session information if a routing change occurs that affects this session?

- A. Sessions involving port7 or port19 will not have their routing information flushed.
- B. Only the interface and gateway information for dev=7 will be removed.
- C. The session will be flagged as dirty but no route lookups will be performed.
- D. The session information will not change unless the current route has been removed from the routing table.

Answer: D

NEW QUESTION # 15

During which phase of IKEv2 does the Diffie-Helman key exchange take place?

- A. IKE Req_INIT
- B. IKE_SA_INIT
- C. Create_CHILD_SA
- D. IKE_Auth

Answer: B

Explanation:

The Diffie-Hellman exchange occurs during the IKE_SA_INIT messages, where peers negotiate cryptographic parameters and exchange nonces and DH public values.

NEW QUESTION # 16

An administrator wants to capture encrypted phase 2 traffic between two FortiGate devices using the built-in sniffer.

If the administrator knows that there is no NAT device located between both FortiGate devices, which command should the administrator run?

- A. diagnose sniffer packet any 'udp port 500'
- B. diagnose sniffer packet any 'ah'
- C. diagnose sniffer packet any 'udp port 4500'
- D. diagnose sniffer packet any 'ip proto 50'

Answer: D

NEW QUESTION # 17

The local OSPF router is unable to establish adjacency with a peer. Which two things should the administrator do to troubleshoot the issue? (Choose two.)

- A. Check if there is an active static route to the peer.
- **B. Check if IP protocol 89 is blocked.**
- **C. Check whether both peers have an IP address within the same subnet.**
- D. Check whether TCP port 179 is blocked.

Answer: B,C

Explanation:

Verify that both routers' OSPF-enabled interfaces have IPs in the same subnet - adjacency only forms with peers on the same network segment.

Make sure IP protocol 89 (OSPF) isn't being blocked by any firewall or ACL-OSPF uses IP 89, not a TCP or UDP port.

NEW QUESTION # 18

Exhibit.

Refer to the exhibit, which contains a screenshot of some phase 1 settings.

The VPN is not up. To diagnose the issue, the administrator enters the following CLI commands on an SSH session on FortiGate:

```
diagnose vpn ike log-filter log-dat-addr4 10.0.10.1
diagnose debug application ike -1
```

However, the IKE real-time debug does not show any output. Why?

- A. The log-filter setting is incorrect. The VPN traffic does not match this filter.
- **B. The administrator must also run the command diagnose debug enable.**
- C. Replace diagnose debug application ike -1 with diagnose debug application ipsec -1.
- D. The debug shows only error messages. If there is no output, then the phase 1 and phase 2 configurations match.

Answer: B
