|
default-action accept
vpn 2
interface natpool1
ip address 192.168.1.1/32
no shutdown
```

- D.

Answer: A

Explanation:

When dealing with overlapping IP addresses in different branch sites, it's crucial to use NAT (Network Address Translation) to avoid IP conflicts and establish proper communication.

NAT Configuration:

Source NAT: This involves translating the source IP addresses of the packets as they leave a specific interface. This can help avoid IP conflicts by ensuring that the IP addresses used within the network are unique.

Data Policy: A data policy must be created that matches the source IP addresses and applies the NAT pool to translate these addresses.

Option A Analysis:

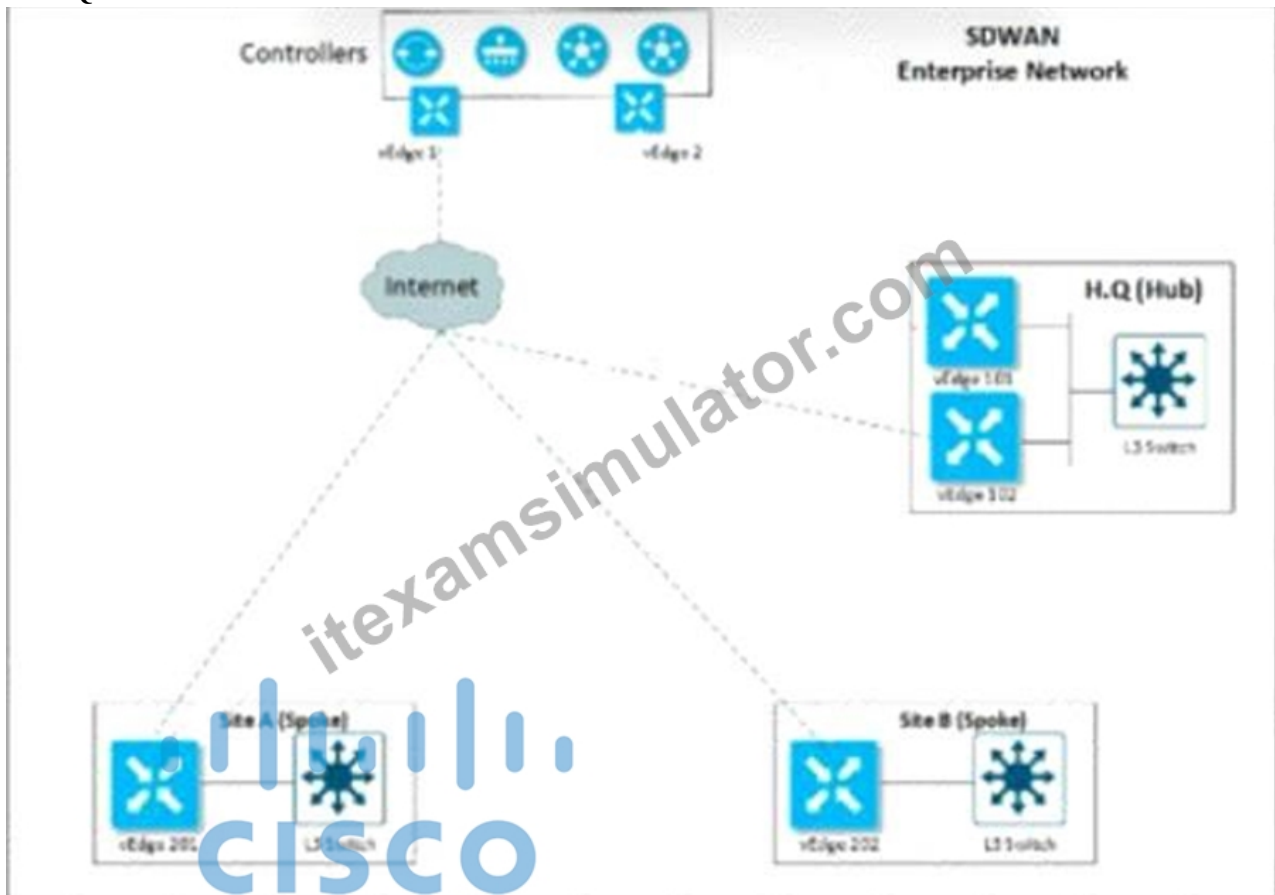

Policy Definition: The data policy `Srvc_Plane_NAT` includes a sequence that matches the source IP `10.0.0.1/32` and accepts the action to apply NAT using `nat pool 1`.

Interface Configuration: The interface `ge0/0/0` is configured with the IP address `192.168.1.1/32` and is not shut down, ensuring it is active and can handle the NAT translation.
