Latest Splunk SPLK-1002 Mock Exam | SPLK-1002 Latest Braindumps

SPLK-1002 study material applies to all types of candidates. Buying a set of learning materials is not difficult, but it is difficult to buy one that is suitable for you. For example, some learning materials can really help students get high scores, but they usually require users to have a lot of study time, which is difficult for office workers. However, SPLK-1002 Study Material is to help students

improve their test scores by improving their learning efficiency. Therefore, users can pass exams with very little learning time.

Splunk SPLK-1002 certification exam is designed for individuals who wish to showcase their expertise in using Splunk Core. SPLK-1002 exam is a testament to an individual's ability to perform complex searches, create reports and dashboards, and manage knowledge objects. Splunk Core Certified Power User Exam certification exam is known as the Splunk Core Certified Power User exam and is recognized globally as a valid certification for proficiency in Splunk.

The SPLK-1002 Exam covers a range of topics, including searching and filtering data, creating reports and dashboards, using field aliases and calculations, working with lookups and macros, and configuring alerts and scheduled reports. To prepare for the exam, Splunk offers a range of training courses and resources, including online courses, instructor-led training, and study guides.

Splunk Core Certified Power User Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31
Which of the following eval command functions is valid?

- A. tostring()
- B. print()
- C. int()
- D. count()

Answer: A

Explanation:
https://docs.splunk.com/Documentation/Splunk/latest/SearchReference/CommonEvalFunctions

NEW QUESTION # 32
What is the correct syntax to find events associated with a tag?

- A. tags=<value>
- B. tags:<field>=<value>
- C. tag:<field>=<value>
- D. tag=<value>

Answer: D

Explanation:
The correct syntax to find events associated with a tag in Splunk is tag=<value>1. So, the correct answer is D) tag=<value>. This syntax allows you to annotate specified fields in your search results with tags1.
In Splunk, tags are a type of knowledge object that you can use to add meaningful aliases to field values in your data1. For example, if you have a field called status_code in your data, you might have different status codes like 200, 404, 500, etc. You can create tags for these status codes like success for 200, not_found for 404, and server_error for 500. Then, you can use the tag command in your searches to find events associated with these tags1.
Here is an example of how you can use the tag command in a search:
index=main sourcetype=access_combined | tag status_code
In this search, the tag command annotates the status_code field in the search results with the corresponding tags. If you have tagged the status code 200 with success, the status code 404 with not_found, and the status code 500 with server_error, the search results will include these tags1.
You can also use the tag command with a specific tag value to find events associated with that tag. For example, the following search finds all events where the status code is tagged with success:
index=main sourcetype=access_combined | tag status_code | search tag::status_code=success In this search, the tag command annotates the status_code field with the corresponding tags, and the search command filters the results to include only events where the status_code field is tagged with success1.

NEW QUESTION # 33
If a search returns _____ it can be viewed as a chart.

- A. keywords
- B. statistics

- C. timestamps
- D. events

Answer: B

Explanation:
Explanation
If a search returns statistics, it can be viewed as a chart2. Statistics are tabular data that show the relationship between two or more fields2. You can create statistics by using commands such as stats, chart or timechart2. You can view statistics as a chart by selecting the Visualization tab in the Search app and choosing a chart type such as column, line or pie2. Therefore, option B is correct, while options A, C and D are incorrect because they are not types of data that can be viewed as a chart.

NEW QUESTION # 34
When you mouse over and click to add a search term this (thesE. Boolean operator(s) is(arE. not implied. (Select all that apply).

- A. NOT
- B. OR
- C. AND
- D. ( )

Answer: D

NEW QUESTION # 35
Which method in the Field Extractor would extract the port number from the following event? |
10/20/2022 - 125.24.20.1 ++++ port 54 - user: admin <web error>

- A. Delimiter
- B. Regular expression
- C. The Field Extractor tool cannot extract regular expressions.
- D. rex command

Answer: D

Explanation:
Explanation
The rex command allows you to extract fields from events using regular expressions. You can use the rex command to specify a named group that matches the port number in the event. For example:
rex "\+\+\+\+port (?<port>\d+)"
This will create a field called port with the value 54 for the event.
The delimiter method is not suitable for this event because there is no consistent delimiter between the fields.
The regular expression method is not a valid option for the Field Extractor tool. The Field Extractor tool can extract regular expressions, but it is not a method by itself.
