However, when asked whether the C_SEC_2405 Latest Dumps are reliable, costumers may be confused. For us, we strongly recommend the C_SEC_2405 exam questions compiled by our company, here goes the reason. On one hand, our C_SEC_2405 test material owns the best quality.

SAP Certified Associate - Security Administrator Sample Questions (Q36-Q41):

NEW QUESTION # 36

When creating PFCG roles for SAP Fiori access, what is included automatically when adding a catalog to the menu of a back-end PFCG role? Note: There are 2 correct answers to this question.

- A. The start authorizations and the authorization default values for each IWSG TADIR service definitions in the catalog.
- B. The IWSV TADIR service definitions from the catalog.
- C. The start authorizations and the authorization default values for each IWSV TADIR service definitions in the catalog.
- D. The IWSG TADIR service definitions from the catalog.

Answer: A,B

NEW QUESTION # 37

Which of the following is part of the SAP S/4HANA central UI component?

- A. SAP Fiori launchpad
- B. SAP Fiori object page
- C. SAP Fiori analytical application
- D. SAP Fiori transactional application

Answer: A

Explanation:

The SAP Fiori launchpad is the central UI component in SAP S/4HANA, serving as the primary entry point for users to access Fiori applications. It provides a unified, role-based interface where users can navigate to transactional, analytical, or object page applications via tiles organized in catalogs and spaces. The launchpad integrates with the SAP Fiori infrastructure, ensuring consistent user experience and secure access to applications. SAP Fiori object pages, transactional applications, and analytical applications are specific types of Fiori apps accessed through the launchpad, not central UI components themselves. The launchpad's role as the central hub supports personalized navigation, single sign-on, and application management, making it a cornerstone of the S/4HANA user interface. By centralizing access, the Fiori launchpad enhances usability and security, ensuring that users only interact with applications authorized by their roles, aligning with SAP's modern, user-centric design philosophy for enterprise systems.

NEW QUESTION # 38

Which privilege types are available in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. Package
- B. System
- C. Analytic
- D. Object
- E. Application

Answer: A,B,D

Explanation:

* Context: Privileges in SAP HANA Cloud define access control and permissions for various system entities.

* Solution Descriptions:

* B. Package: Grants permissions for packages, a logical grouping of objects.

* C. System: Controls system-level actions and configurations.

* E. Object: Provides access control at the object level.

SAP Security References:

* SAP HANA Cloud Privilege Management Documentation

NEW QUESTION # 39

What does SAP recommend you do when you transport a custom leading business role in SAP S/4HANA Cloud Public Edition?

- A. Add all derived business roles as dependencies to the Software Collection.
- B. Add the pre-delivered business role that was used as a template to create the custom leading business role to the Software Collection.
- C. Add all other leading business roles from the same Line of Business as dependencies to the Software Collection.

Answer: B

Explanation:

When transporting a custom leading business role in SAP S/4HANA Cloud Public Edition:

* Include the Template Role (C):

* SAP recommends adding the pre-delivered business role (template) to the software collection.

This ensures that all dependencies and baseline configurations are included during the transport.

* Maintain Consistency:

* Adding the template role ensures that the custom role remains functional across environments and avoids issues related to missing dependencies.

NEW QUESTION # 40

In SAP HANA Cloud, who has access to a database object?

- A. The user DBADMIN and the group owner
- B. The creator and the schema owner
- C. The user SYSTEM and the creator
- D. The owner and the SAP-owned users

Answer: B

Explanation:

In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework,

ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.

NEW QUESTION # 41

• • • • •

With the SAP C_SEC_2405 Certification Exam, you can demonstrate your skills and upgrade your knowledge. The SAP C_SEC_2405 certification exam will provide you with many personal and professional benefits such as more career opportunities, updated and in demands expertise, an increase in salary, instant promotion, and recognition of skills across the world.
