

Don't Miss Up to 1 year of Free Updates–Buy NAS-C01 Dumps Now

Once bit twice shy! Many candidates feel depressed since they failed before, and someone choose to delay exams, someone may choose to give up. Cheer up! Our latest Snowflake NAS-C01 exam review questions will be your best savior and help you out of failure experience. Yes. We are the best authorized legal company which offers Valid NAS-C01 Exam Review questions many years, we are entitled as the best high passing rate provider now.

PassTorrent gives a guarantee to our customers that they can pass the Snowflake NAS-C01 Certification Exam on the first try by preparing from the PassTorrent and if they fail to pass it despite their efforts they can claim their payment back as per terms and conditions. PassTorrent facilitates customers with a 24/7 support system which means whenever they get stuck somewhere they don't struggle and contact the support system which will assist them in the right way. A lot of students have prepared from practice material and rated it positively.

Latest Study NAS-C01 Questions - Vce NAS-C01 Files

So you do not need to worry about the NAS-C01 exam preparation just download PassTorrent NAS-C01 latest dumps and start preparing today. The PassTorrent is committed to ace the NAS-C01 exam preparation and success journey successfully in a short

time period. To achieve this objective the PassTorrent is offering Snowflake NAS-C01 Practice Test questions with high-in-demand features.

Snowflake SnowPro Specialty - Native Apps Sample Questions (Q176-Q181):

NEW QUESTION # 176

You are designing a Snowflake Native Application that allows consumers to upload data files to a stage within their account, which your application then processes. To enhance security and data governance, you need to implement a callback function that validates the uploaded data before it is processed by your application. The callback function must verify the file format and size. Which of the following options correctly outlines the necessary steps and considerations for implementing this callback function?

- A. Define an event table in the provider account and configure a Snowflake Notification to trigger when a new file is uploaded to the consumer's stage. The notification invokes a remote service that validates the file and updates the event table.
- **B. Implement a stored procedure within the application package that receives the file path as input. Register this stored procedure as a callback using 'ALTER APPLICATION ... SET callback_procedure = ...'. The stored procedure performs the validation and raises an error if the file is invalid.**
- C. Set up an AWS Lambda function triggered by S3 events when files are uploaded to the consumer's stage. The Lambda function validates the file format and size and sends a message to a Snowflake queue, which your application then reads.
- D. Create an external function pointing to an API Gateway endpoint that performs the validation. The application logic calls this external function, passing the file path. The external function then returns a boolean indicating success or failure.
- E. Create a UDF that resides within the consumer's account and is called using the 'CALL' command from the provider's application logic. The UDF validates the file properties and returns a boolean indicating success or failure.

Answer: B

Explanation:

The correct approach is to implement a stored procedure within the application package and register it as a callback using 'ALTER APPLICATION ... SET callback_procedure = This method allows the application to define and control the validation logic directly. The application can then react accordingly, such as raising an error to prevent further processing of invalid files. Options A, B, D and E all introduce complexity and security risks by relying on resources external to the application package or consumer account and are not directly supported as callback mechanisms in Snowflake Native Apps.

NEW QUESTION # 177

A Snowflake Native App developer is designing the upgrade process for their application. They need to ensure that data stored in the application's managed tables is preserved during the upgrade and that the application remains functional throughout the upgrade process. Which of the following strategies should the developer implement to achieve these goals? (Select TWO)

- A. Use the 'DROP TABLE' command with the 'CASCADE' option to remove all tables and views before deploying the new version of the application.
- **B. Implement a versioning system for the application's metadata using the 'APPLICATION VERSION' construct, ensuring that the new version can handle data from previous versions.**
- C. Utilize Snowflake's data sharing capabilities to create a read-only replica of the application's data for the new version to access during the upgrade.
- D. Before upgrading, unload all data from the application's tables to cloud storage, and then reload the data into the new version after the upgrade is complete.
- **E. Design the application's data model to be backward-compatible, allowing the new version to read and write data in the format used by previous versions. Use 'ALTER TABLE' to add new columns or modify existing ones without breaking existing functionality.**

Answer: B,E

Explanation:

Option B correctly describes the use of 'APPLICATION VERSION' to manage metadata compatibility between versions. Option D correctly emphasizes designing for backward compatibility in the data model using 'ALTER TABLE' for schema changes, which avoids data loss and ensures a smoother upgrade process.

NEW QUESTION # 178

A Snowflake Native App developer wants to utilize a README.md file within their application package. Which of the following

statements accurately describe the supported usage and purpose of the README.md file in this context?

- A. The README.md file is automatically displayed to consumers within the Snowflake Marketplace listing, providing a detailed overview of the app's functionality and installation instructions.
- B. The README.md file is a Markdown formatted file and used only for internal documentation by the app developer and is not exposed to consumers through any Snowflake interface.
- C. Snowflake automatically renders the README.md file as part of the application's user interface within the consumer's account, allowing them to view documentation directly from Snowflake.
- D. The README.md file can be programmatically accessed within the application logic using a Snowflake-provided API to dynamically generate documentation for the consumer.
- E. The README.md file must adhere to a specific Snowflake schema for metadata to be automatically extracted and displayed within the consumer's Snowflake environment post-installation.

Answer: A

Explanation:

The README.md file in a Snowflake Native App package is primarily used to populate the app's listing in the Snowflake Marketplace. It provides information about the app to potential consumers. It's not used for internal documentation only, nor is it rendered within the consumer's account post-installation. It doesn't require a specific Snowflake schema, nor is it programmatically accessible from the app.

NEW QUESTION # 179

You're developing a Snowpark Container Services application. Your 'service.yaml' file defines a service named 'data_processor'. You want to create a service endpoint, 'ingest_endpoint', that is secured and accessible only by authorized consumers of your Snowflake Native Application. Select the TWO SQL statements that, when used together, will correctly create and bind the service endpoint, ensuring proper OAuth authentication and authorization.

- A. `BIND SERVICE ENDPOINT ingest_endpoint FOR SERVICE data_processor WITH AUTHENTICATION TYPE = NONE TO APPLICATION PACKAGE;`
- B. `ALTER SERVICE data_processor ADD ENDPOINT ingest_endpoint WITH AUTHENTICATION TYPE = OAUTH;`
- C. `CREATE SERVICE ENDPOINT ingest_endpoint FOR SERVICE data_processor WITH AUTHENTICATION TYPE = OAUTH;`
- D. `CREATE OR REPLACE SERVICE ENDPOINT ingest_endpoint FOR SERVICE data_processor WITH AUTHENTICATION TYPE = SNOWFLAKE_JWT;`
- E. `BIND SERVICE ENDPOINT ingest_endpoint FOR SERVICE data_processor WITH AUTHENTICATION TYPE = OAUTH TO APPLICATION PACKAGE;`

Answer: C,E

Explanation:

'CREATE SERVICE ENDPOINT ingest_endpoint FOR SERVICE data_processor WITH AUTHENTICATION TYPE = OAUTH;' creates the actual service endpoint. 'BIND SERVICE ENDPOINT ingest_endpoint FOR SERVICE data_processor WITH AUTHENTICATION TYPE = OAUTH TO APPLICATION PACKAGE;' links the endpoint to the application package and enables OAuth. The 'Bind' command makes sure to use the proper service with Authentication. Without Authentication, application can be compromised easily. Thus, option B and D are invalid here.

NEW QUESTION # 180

A Snowflake Native App developer encounters an issue where the application fails to install on a consumer's account due to insufficient privileges. The developer has verified that the necessary privileges are declared in the application's privileges section of the manifest file. However, the installation still fails. What could be the most likely cause of this issue, and how can it be resolved?

- A. The consumer's account does not have the SNOWFLAKE.APP_INSTALLER role enabled. Ensure this role is granted to the appropriate user.
- B. The privileges declared in the manifest file are not supported by the consumer's Snowflake edition. Review and adjust the required privileges.
- C. The consumer account has object level grants conflicting with the required grants. Revoke the object level grants and try again.
- D. The privileges were declared in the manifest file, but were not actually granted to the application role in the provider account before creating the version. Grant the declared privileges to the application role using `GRANT ON ACCOUNT TO`

APPLICATION ROLE and create a new version.

- E. The consumer's account is not on the same Snowflake region as the provider account. Verify and align the regions.

Answer: D

Explanation:

Even if the privileges are declared in the manifest file, they must be explicitly granted to the application role in the provider account before a new version is created. The consumer's Snowflake edition might not support all privileges (but the error would be slightly different), SNOWFLAKE.APP INSTALLER role does not exist, regional difference does not matter as such if provider created version after granting the privileges. The application's role in provider account needs required permission using GRANT ON ACCOUNT TO APPLICATION ROLE.

NEW QUESTION # 181

.....

One of the reason for this popularity is our study material are accompanied by high quality and efficient services so that they can solve all your problems. We guarantee that after purchasing our NAS-C01 test prep, we will deliver the product to you as soon as possible about 5-10 minutes. So you don't need to wait for a long time or worry about the delivery time has any delay. We will transfer our NAS-C01 Test Prep to you online immediately, and this service is also the reason why our NAS-C01 study torrent can win people's heart and mind.

Latest Study NAS-C01 Questions: <https://www.passtorrent.com/NAS-C01-latest-torrent.html>

Secondly, our NAS-C01 learning materials have been tested and checked by our specialists for many times, Prepare for Latest Study NAS-C01 Questions - SnowPro Specialty - Native Apps exam with best Latest Study NAS-C01 Questions - SnowPro Specialty - Native Apps dumps exam questions and answers download free try from PassTorrent Latest Study NAS-C01 Questions The best and most updated latest Latest Study NAS-C01 Questions - SnowPro Specialty - Native Apps dumps pdf training resources free download, And if you study with our NAS-C01 exam questions for only 20 to 30 hours, you will pass the NAS-C01 exam easily.

Preventive Maintenance for Your Operating System, Sobell is president of Sobell Associates Inc, Secondly, our NAS-C01 Learning Materials have been tested and checked by our specialists for many times.

Get Success In Snowflake NAS-C01 Exam With PassTorrent Quickly

Prepare for SnowPro Specialty - Native Apps exam with best SnowPro Specialty - Native Apps dumps exam questions NAS-C01 and answers download free try from PassTorrent The best and most updated latest SnowPro Specialty - Native Apps dumps pdf training resources free download.

And if you study with our NAS-C01 exam questions for only 20 to 30 hours, you will pass the NAS-C01 exam easily, You can easily download our free demo of Snowflake NAS-C01 test dumps materials; come on and try it.
