

CWSP-208 Exam Dumps Can 100% Guarantee Pass CWSP-208 Exam

Download Valid CWSP-208 Exam Dumps for Best Preparation

Exam : **CWSP-208**

Title : Certified Wireless Security Professional (CWSP)

<https://www.passcert.com/CWSP-208.html>

1 / 4

What's more, part of that PracticeDump CWSP-208 dumps now are free: <https://drive.google.com/open?id=17v5dF-RIQ4HNGLdZhGICv6ILPusC492t>

With the advent of knowledge times, we all need some professional certificates such as CWNP CWSP-208 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our CWNP CWSP-208 practice materials for you with our heartfelt sincerity.

CWNP CWSP-208 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Vulnerabilities, Threats, and Attacks: This section of the exam evaluates a Network Infrastructure Engineer in identifying and mitigating vulnerabilities and threats within WLAN systems. Candidates are expected to use reliable information sources like CVE databases to assess risks, apply remediations, and implement quarantine protocols. The domain also focuses on detecting and responding to attacks such as eavesdropping and phishing. It includes penetration testing, log analysis, and using monitoring tools like SIEM systems or WIPS• WIDS. Additionally, it covers risk analysis procedures, including asset management, risk ratings, and loss calculations to support the development of informed risk management plans.

Topic 2	<ul style="list-style-type: none"> • WLAN Security Design and Architecture: This part of the exam focuses on the abilities of a Wireless Security Analyst in selecting and deploying appropriate WLAN security solutions in line with established policies. It includes implementing authentication mechanisms like WPA2, WPA3, 802.1X • EAP, and guest access strategies, as well as choosing the right encryption methods, such as AES or VPNs. The section further assesses knowledge of wireless monitoring systems, understanding of AKM processes, and the ability to set up wired security systems like VLANs, firewalls, and ACLs to support wireless infrastructures. Candidates are also tested on their ability to manage secure client onboarding, configure NAC, and implement roaming technologies such as 802.11r. The domain finishes by evaluating practices for protecting public networks, avoiding common configuration errors, and mitigating risks tied to weak security protocols.
Topic 3	<ul style="list-style-type: none"> • Security Policy: This section of the exam measures the skills of a Wireless Security Analyst and covers how WLAN security requirements are defined and aligned with organizational needs. It emphasizes evaluating regulatory and technical policies, involving stakeholders, and reviewing infrastructure and client devices. It also assesses how well high-level security policies are written, approved, and maintained throughout their lifecycle, including training initiatives to ensure ongoing stakeholder awareness and compliance.
Topic 4	<ul style="list-style-type: none"> • Security Lifecycle Management: This section of the exam assesses the performance of a Network Infrastructure Engineer in overseeing the full security lifecycle—from identifying new technologies to ongoing monitoring and auditing. It examines the ability to assess risks associated with new WLAN implementations, apply suitable protections, and perform compliance checks using tools like SIEM. Candidates must also demonstrate effective change management, maintenance strategies, and the use of audit tools to detect vulnerabilities and generate insightful security reports. The evaluation includes tasks such as conducting user interviews, reviewing access controls, performing scans, and reporting findings in alignment with organizational objectives.

Get the Real CWNP CWSP-208 Exam Dumps In Different Formats

Our company PracticeDump abides by the industry norm all the time. By virtue of the help from professional experts, who are conversant with the regular exam questions of our latest CWSP-208 real dumps. They can satisfy your knowledge-thirsty minds. And our CWSP-208 Exam Quiz is quality guaranteed. By devoting ourselves to providing high-quality CWSP-208 practice materials to our customers all these years we can guarantee all content is of the essential part to practice and remember.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q68-Q73):

NEW QUESTION # 68

In order to acquire credentials of a valid user on a public hot-spot network, what attacks may be conducted? Choose the single completely correct answer.

- **A. Social engineering and/or eavesdropping**
- B. Code injection and/or XSS
- C. RF DoS and/or physical theft
- D. Authentication cracking and/or RF DoS
- E. MAC denial of service and/or physical theft

Answer: A

Explanation:

Comprehensive Detailed Explanation:

On public Wi-Fi hotspots (typically unsecured), attackers often perform:

Eavesdropping: By passively listening to unencrypted traffic, an attacker can capture credentials or sensitive data.

Social engineering: Users may be tricked into entering their credentials on a spoofed login page or disclosing them directly through phishing or manipulation.

These are the most effective and common methods for credential theft in open network environments.

Incorrect:

B & C. Physical theft is not network-based and not relevant to hotspot-based credential acquisition.

D). Authentication cracking is not applicable to open networks with captive portals.

E). Code injection/XSS may happen in web apps but are not directly methods for acquiring hotspot credentials.

CWNP Security Essentials: Eavesdropping and Social Engineering in WLANs

NEW QUESTION # 69

Given: Fred works primarily from home and public wireless hot-spots rather than commuting to the office. He frequently accesses the office network remotely from his Mac laptop using the local 802.11 WLAN.

In this remote scenario, what single wireless security practice will provide the greatest security for Fred?

- A. Use WIPS sensor software on the laptop to monitor for risks and attacks
- B. Use secure protocols, such as FTP, for remote file transfers.
- C. Use 802.1X/PEAPv0 to connect to the corporate office network from public hot-spots
- D. Use enterprise WIPS on the corporate office network
- **E. Use an IPSec VPN for connectivity to the office network**
- F. Use only HTTPS when agreeing to acceptable use terms on public networks

Answer: E

Explanation:

When connecting over untrusted public networks:

An IPSec VPN provides encryption and authentication from the client to the corporate network.

This protects against eavesdropping, man-in-the-middle attacks, and spoofed hotspots.

Incorrect:

B). HTTPS only protects web sessions-not all traffic.

C). Enterprise WIPS at the office won't protect remote users.

D). Laptop-based WIPS software is rare and less effective than using a VPN.

E). 802.1X/PEAP is not designed for remote use over public hotspots.

F). FTP is not secure; secure alternatives include SFTP or FTPS.

NEW QUESTION # 70

What field in the RSN information element (IE) will indicate whether PSK- or Enterprise-based WPA or WPA2 is in use?

- A. Group Cipher Suite
- B. RSN Capabilities
- C. Pairwise Cipher Suite List
- **D. AKM Suite List**

Answer: D

Explanation:

The AKM (Authentication and Key Management) Suite List field within the RSN Information Element defines which authentication methods are supported by the AP. This field distinguishes between PSK (Pre- Shared Key) and Enterprise (802.1X) modes:

AKM Suite OUI 00-0F-AC:1 = WPA2-Personal (PSK)

AKM Suite OUI 00-0F-AC:2 = WPA2-Enterprise (802.1X)

By examining this field in Beacon or Probe Response frames, a protocol analyzer can determine the authentication method enforced by the BSS.

References:

CWNP CWSP-208 Objectives: "RSN IE Analysis" and "Authentication Methods Identification"

NEW QUESTION # 71

What elements should be addressed by a WLAN security policy? (Choose 2)

- A. Enabling encryption to prevent MAC addresses from being sent in clear text
- B. The exact passwords to be used for administration interfaces on infrastructure devices
- C. How to prevent non-IT employees from learning about and reading the user security policy
- **D. End-user training for password selection and acceptable network use**
- **E. Social engineering recognition and mitigation techniques**

Answer: D,E

Explanation:

A strong WLAN security policy should encompass both technical controls and user education.

C). Educating users about secure password creation and acceptable use policies helps reduce risks due to weak authentication and misuse.

E). Social engineering is a common attack vector, and educating users to recognize and report such attempts is critical.

Incorrect:

A). MAC addresses are always transmitted in the clear, even with encryption.

B). Policies should be shared with users to promote compliance and awareness.

D). Passwords for administrative systems should not be disclosed in public documentation or policy documents.

NEW QUESTION # 72

Given: You have a Windows laptop computer with an integrated, dual-band, Wi-Fi compliant adapter. Your laptop computer has protocol analyzer software installed that is capable of capturing and decoding 802.11ac data.

What statement best describes the likely ability to capture 802.11ac frames for security testing purposes?

- A. The only method available to capture 802.11ac frames is to perform a remote capture with a compatible access point.
- B. Only Wireshark can be used to capture 802.11ac frames as no other protocol analyzer has implemented the proper frame decodes.
- **C. Integrated 802.11ac adapters are not typically compatible with protocol analyzers in Windows laptops. It is often best to use a USB adapter or carefully select a laptop with an integrated adapter that will work.**
- D. All integrated 802.11ac adapters will work with most protocol analyzers for frame capture, including the Radio Tap Header.
- E. Laptops cannot be used to capture 802.11ac frames because they do not support MU-MIMO.

Answer: C

Explanation:

Most integrated Wi-Fi adapters in Windows laptops are not capable of entering "monitor mode" or capturing 802.11ac frames properly. Compatibility with protocol analyzers like Wireshark or Omnipcap requires special drivers or specific USB adapters. Therefore, it is recommended to use a USB adapter known to support monitor mode and frame capture on 802.11ac for accurate and complete data capture.

Incorrect:

A). Not all adapters support protocol analyzer features.

C). MU-MIMO support is irrelevant for frame capture.

D). Other analyzers besides Wireshark can decode 802.11ac (e.g., Omnipcap).

E). Remote capture is not the only method-local USB adapters are effective too.
