Passing 1Y0-204 Exam demonstrates that the candidate has the knowledge and skills required to manage and maintain Citrix Virtual Apps and Desktops 7 environments effectively.

Citrix Virtual Apps and Desktops 7 Administration Sample Questions (Q60-Q65):

NEW QUESTION # 60

Scenario: A Citrix Administrator configured Citrix ADC with multiple admin partitions, with different resources running one each. The administrator receives an SNMP alert stating 'a Load Balanced Virtual Server is down'. When the administrator checks the Citrix ADC, the resource on the partition that was usually managed is NOT there.

Now, the administrator has to check each partition to find the load balanced virtual server that is down.

What can the administrator do to add the partition information to the SNMP traps to avoid this from happening in the future?

- A. Configure additional SNMP trap listeners.
- **B. Add the partition information to the SNMP traps.**
- C. Change SNMP trap options.
- D. Configure the SNMP Manager to send the partition information.

Answer: B

Explanation:

The administrator can add the partition information to the SNMP traps by using the command `set snmp alarm partition-name` on the Citrix ADC. This command enables the Citrix ADC to include the name of the partition that generated the trap in the SNMP trap message. This way, the administrator can easily identify which partition has the load balanced virtual server that is down. The other options are not relevant or effective for this purpose. See SNMP alarms for more details.

NEW QUESTION # 61

Which disk type will always be created for each virtual machine, when creating new virtual machines using Machine Creation Services (MCS)?

- A. Differencing (Diff) disk
- **B. Identity disk**
- C. Full-clone base disk
- D. Personal vDisk

Answer: B

Explanation:

Explanation/Reference: <https://docs.citrix.com/en-us/xenapp-and-xendesktop/7-15-ltsr/install-configure/machine-catalogs-create.html>

NEW QUESTION # 62

Scenario: A Citrix Administrator has deployed a Citrix Cloud-managed Citrix Virtual Apps and Desktops Site with one on-premises resource location and two Cloud Connectors. An on-premises StoreFront server group is used to access published resources. During user acceptance testing, due to adverse weather conditions, network connectivity between the on-premises location and Citrix Cloud was broken for several hours.

Which statement describes what will occur in this scenario?

- A. Each Citrix Cloud Connector at the resource location will continue to broker new connections, for certain FlexCast models, using Connection Leasing and existing HDX connections will NOT be impacted.
- B. Users will NOT be able to access published resources, and existing sessions will be disconnected until network connectivity to Citrix Cloud is restored.
- C. The Citrix Cloud Connectors at the resource location will continue to manage existing sessions, but no new sessions can be initiated until network connectivity to Citrix Cloud is restored.
- **D. One of the Citrix Cloud Connectors at the resource location is elected to be the primary broker and uses its Local Host Cache to broker new sessions and manage existing HDX connections.**

Answer: D

NEW QUESTION # 63

Scenario: A Citrix Administrator has received complaints from published application users. They report that it takes a long time to relaunch an application after they close it by mistake.

The administrator needs a solution that will reduce application launch times in these situations.

Which feature should the administrator enable?

- A. Application Prelaunch
- B. Session Sharing
- C. Session Reliability
- **D. Application Lingering**

Answer: D

NEW QUESTION # 64

Which two features within Citrix Director can a Citrix Administrator use to view historical resource utilization for a machine running the Virtual Delivery Agent (VDA)? (Choose two.)

- A. Dashboard
- **B. Applications**
- C. Alerts
- **D. Trends**
- E. Search

Answer: B,D

NEW QUESTION # 65
