

# Practice DA0-002 Test Online & Reliable DA0-002 Test Cram

BONUS!!! Download part of Actual4Dumps DA0-002 dumps for free: [https://drive.google.com/open?id=1unR-2vabwgTry\\_P442E2g9MHLId7UbAs](https://drive.google.com/open?id=1unR-2vabwgTry_P442E2g9MHLId7UbAs)

Buy CompTIA DA0-002 preparation material from a trusted company such as Actual4Dumps. This will ensure you get updated CompTIA DA0-002 study material to cover everything before the big day. Practicing for an CompTIA Data+ Exam (2025) (DA0-002) exam is one of the best ways to ensure success. It helps students become familiar with the format of the actual DA0-002 Practice Test. It also helps to identify areas where more focus and attention are needed. Furthermore, it can help reduce the anxiety and stress associated with taking an CompTIA Data+ Exam (2025) (DA0-002) exam as it allows students to gain confidence in their knowledge and skills.

If you don't have enough time to study for your CompTIA DA0-002 exam, Actual4Dumps provides CompTIA DA0-002 Pdf questions. You may quickly download CompTIA DA0-002 exam questions in PDF format on your smartphone, tablet, or desktop. You can Print CompTIA DA0-002 PDF Questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go.

## Reliable DA0-002 Test Cram, DA0-002 Valid Exam Forum

Actual4Dumps helps you reach your objective by offering CompTIA Data+ Exam (2025) updated test questions. These CompTIA

DA0-002 Dumps questions are enough to get knowledge necessary to crack the examination on the first attempt. Our CompTIA Data+ Exam (2025) practice material is designed by considering the content published by CompTIA. Relevancy of valid questions with the actual exam's syllabus helps you understand the pattern of the exam. Actual4Dumps offers its CompTIA Data+ Exam (2025) product in three forms, DA0-002 PDF, desktop practice exam software, and CompTIA Data+ Exam (2025) web-based practice test.

## CompTIA Data+ Exam (2025) Sample Questions (Q91-Q96):

### NEW QUESTION # 91

Which of the following best describes the semi-structured data that is gathered when web scraping?

- A. CSV
- B. HTML
- C. CSS
- **D. JSON**

**Answer: D**

Explanation:

This question pertains to the Data Acquisition and Preparation domain, which in DA0-002 includes understanding data acquisition concepts and the types of data gathered from various sources, such as web scraping. Web scraping involves extracting data from websites, and the data gathered is often semi-structured, meaning it has some organizational structure but isn't fully relational like a database table.

\* JSON (Option A): JSON (JavaScript Object Notation) is a semi-structured data format commonly used in web applications.

Web scraping often retrieves data in JSON format via APIs or embedded scripts, as it's lightweight and structured with key-value pairs, making it ideal for semi-structured data.

\* CSV (Option B): CSV (Comma-Separated Values) is a structured format typically used for tabular data. It's not commonly the direct output of web scraping, though scraped data might be converted to CSV later.

\* CSS (Option C): CSS (Cascading Style Sheets) is used for styling web pages and isn't a data format, making it irrelevant for describing scraped data.

\* HTML (Option D): HTML (HyperText Markup Language) is the structure of web pages and is often the raw format scraped during web scraping. While HTML is semi-structured due to its tag-based hierarchy, it's primarily a markup language, not a data format, and the actual data extracted is often parsed into formats like JSON.

The DA0-002 Data Acquisition and Preparation domain aligns with the DA0-001 focus on "data acquisition concepts" (web ID: 14), which includes identifying formats like JSON as semi-structured data commonly acquired through web scraping. JSON is the best fit here due to its prevalence in web data exchange.

### NEW QUESTION # 92

A data analyst needs to get an accurate idea of how data components are automated. Which of the following types of documentation should the analyst review first?

- A. Data lineage
- **B. Data flow diagram**
- C. Data dictionary
- D. Data explainability report

**Answer: B**

Explanation:

This question pertains to the Data Concepts and Environments domain, focusing on documentation for understanding data processes. The analyst needs to understand automation of data components, which involves data movement and processes.

\* Data flow diagram (Option A): A data flow diagram (DFD) visualizes how data moves through systems, including automated processes, making it the best starting point.

\* Data explainability report (Option B): This is related to AI/ML model transparency, not data automation.

\* Data dictionary (Option C): A data dictionary defines data elements, not how they're automated.

\* Data lineage (Option D): Data lineage tracks data origin and transformations but doesn't focus on automation processes.

The DA0-002 Data Concepts and Environments domain includes understanding "data schemas and dimensions," and a data flow diagram is key for visualizing automation.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 1.0 Data Concepts and Environments.

### NEW QUESTION # 93

A data analyst wants to use the following tables to find all the customers who have not placed an order:

Customers table

ID

Name

Address

Products table

ID

Name

Customer\_ID

Which of the following SQL statements is the best way to accomplish this task?

- A. SELECT \* FROM PRODUCTS AS P INNER JOIN CUSTOMERS AS C ON P.Customer\_ID = C.ID WHERE (SELECT COUNT(P.) = 0)
- B. SELECT \* FROM CUSTOMERS AS C LEFT JOIN PRODUCTS AS P ON C.ID = P.Customer\_ID WHERE P.Customer\_ID IS NULL
- C. SELECT \* FROM PRODUCTS AS P LEFT JOIN CUSTOMERS AS C ON P.Customer\_ID = C.ID WHERE P.Customer\_ID IS NOT NULL
- D. SELECT \* FROM CUSTOMERS AS C INNER JOIN PRODUCTS AS P ON C.ID = C.ID WHERE COUNT(P.) = 0

**Answer: B**

Explanation:

This question pertains to the Data Analysis domain, focusing on SQL queries to analyze data relationships.

The task is to find customers who have not placed an order, meaning customers in the Customers table without a matching Customer\_ID in the Products table.

\* Option A: SELECT \* FROM CUSTOMERS AS C LEFT JOIN PRODUCTS AS P ON C.ID = P.

Customer\_ID WHERE P.Customer\_ID IS NULL A LEFT JOIN includes all customers, even those without orders (where Products columns are NULL). Filtering with WHERE P.Customer\_ID IS NULL selects only customers without a match in Products, correctly identifying those who haven't ordered.

\* Option B: SELECT \* FROM CUSTOMERS AS C INNER JOIN PRODUCTS AS P ON C.ID = C.

ID WHERE COUNT(P.\*) = 0 An INNER JOIN only includes matching records, so it won't return customers without orders. The join condition C.ID = C.ID is also incorrect, and COUNT requires a GROUP BY, making this invalid.

\* Option C: SELECT \* FROM PRODUCTS AS P INNER JOIN CUSTOMERS AS C ON P.

Customer\_ID = C.ID WHERE (SELECT COUNT(P.\*) = 0) An INNER JOIN excludes customers without orders, and the subquery syntax is incorrect (COUNT needs a GROUP BY or to be part of a HAVING clause).

\* Option D: SELECT \* FROM PRODUCTS AS P LEFT JOIN CUSTOMERS AS C ON P.

Customer\_ID = C.ID WHERE P.Customer\_ID IS NOT NULL This starts with Products and joins Customers, returning only records with orders (opposite of the task), and IS NOT NULL further excludes non-ordering customers.

The DA0-002 Data Analysis domain includes "applying the appropriate descriptive statistical methods using SQL queries," and a LEFT JOIN with a NULL check is the standard method for finding non-matching records.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 3.0 Data Analysis.

### NEW QUESTION # 94

A data analyst needs to remove all duplicate values between two tables, "Employees" and "Managers," using SQL SELECT statements. Which of the following should the analyst use for this task?

- A. SELECT \* FROM Employees UNION SELECT \* FROM Managers
- B. SELECT \* FROM Employees UNION ALL SELECT \* FROM Managers
- C. SELECT \* FROM Employees JOIN SELECT \* FROM Managers
- D. SELECT \* FROM Employees CROSS JOIN SELECT \* FROM Managers

**Answer: A**

Explanation:

This question pertains to the Data Acquisition and Preparation domain, focusing on combining and deduplicating data using SQL. The task is to remove duplicates between two tables, meaning the analyst needs a unique set of records from both.

\* SELECT \* FROM Employees UNION ALL SELECT \* FROM Managers (Option A): UNION ALL combines all rows from

both tables, including duplicates, which doesn't meet the requirement.

\* SELECT \* FROM Employees UNION SELECT \* FROM Managers (Option B): UNION combines rows from both tables and automatically removes duplicates, providing a unique set of records, which fits the task.

\* SELECT \* FROM Employees JOIN SELECT \* FROM Managers (Option C): This syntax is incorrect; a JOIN requires an ON clause, and it wouldn't remove duplicates.

\* SELECT \* FROM Employees CROSS JOIN SELECT \* FROM Managers (Option D): A CROSS JOIN creates a Cartesian product, resulting in all possible combinations, not removing duplicates.

The DA0-002 Data Acquisition and Preparation domain includes "executing data manipulation," and UNION is the correct SQL operation for combining tables while removing duplicates.

Reference: CompTIA Data+ DA0-002 Draft Exam Objectives, Domain 2.0 Data Acquisition and Preparation.

### NEW QUESTION # 95

Which of the following best describes the method used to combine files, software, and libraries for use on various operating systems and environments?

- A. Code repository
- B. Package manager
- C. Containerization
- D. Virtual machine

**Answer: C**

Explanation:

This question pertains to the Data Concepts and Environments domain, focusing on methods for managing software and data environments. The task is to identify a method that combines files, software, and libraries for use across different systems.

\* Package manager (Option A): Package managers (e.g., npm) manage software dependencies but don't combine files and libraries for cross-system use.

\* Code repository (Option B): Code repositories (e.g., GitHub) store code but don't package it for deployment across environments.

\* Virtual machine (Option C): Virtual machines emulate entire operating systems, which is heavier than needed for combining files and libraries.

\* Containerization (Option D): Containerization (e.g., Docker) packages files, software, and libraries into a container that can run consistently across different operating systems and environments, making it the best choice.

The DA0-002 Data Concepts and Environments domain includes understanding "data environments," and containerization is a standard method for ensuring consistency across systems.
