## EMC Dell PowerFlex Operate Exam Sample Questions (Q46-Q51):

### NEW QUESTION # 46

What is the primary function of storage data targets in PowerFlex?

- **A. Organize drives for storage pools**
- B. Enable deduplication and compression
- C. Provide access to external storage resources
- D. Manage metadata for nodes

**Answer: A**

Explanation:

In PowerFlex terminology, the Storage Data Server (SDS) acts as the "Target" for I/O operations.

\* Organize drives for storage pools (Option B): The SDS takes ownership of the local physical drives (NVMe/SSD/HDD) installed in the server. It aggregates these drives and contributes them to the Storage Pool. It handles the reading and writing of data blocks to this physical media.

Incorrect Options: Metadata is managed by the MDM (A). Access to external resources (C) is not the function of the SDS (which provides internal storage). Deduplication (D) is a specific feature, not the primary function of the component.

### NEW QUESTION # 47

Which software components are essential for PowerFlex operations? (Choose two).

- **A. Storage Data Server (SDS)**
- B. PowerProtect Data Manager
- **C. Meta Data Manager (MDM)**
- D. VMware Horizon

**Answer: A,C**

Explanation:

This question asks for the core components that make up the PowerFlex software-defined storage system.

\* Meta Data Manager (MDM) (Option B): The MDM is the control plane. It manages the mapping of data, monitors the state of the system, controls rebuilds/rebalances, and acts as the central point for configuration. Without the MDM, the cluster cannot function or change state.

\* Storage Data Server (SDS) (Option A): The SDS is the data plane. It is the software installed on every node that contributes storage. It abstracts the local drives, performs I/O operations, and communicates with other SDSs to replicate data.

Incorrect Options: VMware Horizon (C) is VDI software that uses PowerFlex, but is not part of it.

PowerProtect (D) is backup software.

### NEW QUESTION # 48

CloudLink integration in PowerFlex provides encryption for data in transit. True. False.

- **A. True**
- **B. False**

**Answer: A,B**

Explanation:

\* False: CloudLink is primarily a Data at Rest Encryption (D@RE) and Key Management solution.

\* Detail: CloudLink integrates with PowerFlex to manage the keys for Self-Encrypting Drives (SEDs) or software-based encryption (SDRE). This protects data if a physical drive is stolen from the datacenter.

\* Data in Transit: Encryption of data "in flight" (between SDC and SDS, or SDS and SDS) is handled by the PowerFlex native

Secure Data Transfer (SDT) protocol (introduced in v4.0) or external network encryption (IPsec/VPN). While CloudLink might manage the keys for SDT in newer versions, the core definition of the CloudLink integration feature in PowerFlex exams historically refers to D@RE.

#### NEW QUESTION # 49

What are the benefits of using snapshots in PowerFlex? (Choose two).

- A. Reduce fault tolerance across clusters
- B. Enable quick data recovery
- C. Create a point-in-time copy of data
- D. Minimize storage capacity usage

**Answer: B,C**

Explanation:

\* Enable quick data recovery (Option A): Snapshots provide a "rewind" button. If a database is corrupted or a file is accidentally deleted at 2:00 PM, an administrator can instantly restore the volume to the state captured in the 1:00 PM snapshot.

\* Create a point-in-time copy of data (Option D): This is the definition of a snapshot. It freezes the view of the data at a specific second. This is crucial for backups (backup software backs up the static snapshot while the production application continues to write to the live volume) or for creating test/dev clones of production data.

#### NEW QUESTION # 50

What type of authentication is supported for managing user accounts in PowerFlex?

- A. SAML
- B. RADIUS
- C. LDAP
- D. TACACS+

**Answer: C**

Explanation:

LDAP (Lightweight Directory Access Protocol) is the primary external authentication method supported by the PowerFlex core (MDM) for managing user access.

\* Integration: PowerFlex can be configured to query an Active Directory or OpenLDAP server. This allows administrators to map AD Groups (e.g., "Storage Admins") to PowerFlex roles (e.g., "SuperUser"), centralizing password management and user termination.

\* Note on SAML: While PowerFlex Manager (the management platform) and newer versions (v4.x) support SAML/OIDC for Single Sign-On, LDAP remains the fundamental answer for core authentication in most exam contexts unless specifically asking about PowerFlex Manager 4.0 Identity Management. TACACS+ and RADIUS are network-centric protocols and are generally not supported by the PowerFlex storage core.
