C-BCBTP-2502인기자격증덤프공부자료 - C-BCBTP-2502퍼펙트최신버전덤프
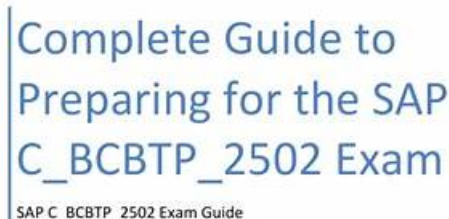

참고: KoreaDumps에서 Google Drive로 공유하는 무료 2026 SAP C-BCBTP-2502 시험 문제집이 있습니다:
https://drive.google.com/open?id=17Ir_d0iMsrhnKE-rSgHUPgRAeLJHfv4V

SAP C-BCBTP-2502시험은 KoreaDumps 에서 출시한 SAP C-BCBTP-2502덤프로 도전하시면 됩니다. SAP C-BCBTP-2502 덤프를 페펙트하게 공부하시면 시험을 한번에 패스할수 있습니다. 구매후 일년무료 업데이트 서비스를 제공해드리기에 SAP C-BCBTP-2502시험문제가 변경되어도 업데이트된 덤프를 받으면 가장 최신시험에 대비할수 있습니다.

SAP C-BCBTP-2502 시험요강:

주제	소개
주제 1	• Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

주제 2	• Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.

시험준비에 가장 좋은 C-BCBTP-2502인기자격증 덤프공부자료 최신 덤프공부

KoreaDumps는SAP C-BCBTP-2502시험에 필요한 모든 문제유형을 커버함으로서 SAP C-BCBTP-2502시험을 합격하기 위한 최고의 선택이라 할수 있습니다. SAP C-BCBTP-2502시험 Braindump를 공부하면 학원다니지 않으셔도 자격증을 취득할수 있습니다. SAP C-BCBTP-2502 덤프정보 상세보기는 이 글의 링크를 클릭하시면 KoreaDumps사이트에 들어오실수 있습니다.

최신 SAP Certified Associate C-BCBTP-2502 무료샘플문제 (Q33-Q38):

질문 # 33
Which SAP BTP component provides a centralized hub for managing enterprise APIs?

- A. SAP API Management
- B. SAP SuccessFactors
- C. SAP Business Network
- D. SAP Ariba

정답：A

설명：
As businesses move toward a "composable" architecture, APIs (Application Programming Interfaces) become the essential links between different software components. SAP API Management, a core capability of the SAP Integration Suite on BTP, provides a centralized hub to design, publish, secure, and monitor these APIs.
In a complex SAP Business Suite environment, APIs might be exposed from S/4HANA, SuccessFactors, or even third-party non-SAP systems. Without a centralized management tool, these connections become difficult to track, secure, and update.
SAP API Management allows IT administrators to enforce consistent security policies (such as OAuth or rate- limiting) across all enterprise services, protecting sensitive data from unauthorized access. It also includes a
"Developer Portal," which serves as a self-service catalog where developers can discover and test available APIs, significantly speeding up the development of new applications and integrations. By positioning API Management as a central pillar, SAP BTP enables "API-first" development, which is critical for digital transformation. This ensures that the enterprise is open and connectable, allowing for seamless communication between the digital core and the vast ecosystem of cloud services, mobile apps, and IoT devices.

질문 # 34
What is the primary function of SAP Business Process Intelligence?

- A. To store customer transactional data.
- B. To manage API security and integrations.
- C. To analyze and optimize business processes using AI-driven insights.
- D. To replace existing workflow automation tools.

정답：C

설명：
Before an organization can automate or improve its operations, it must first understand how its processes are actually running. The primary function of SAP Business Process Intelligence (largely centered around the SAP Signavio suite) is to analyze and optimize business processes using AI-driven insights. It provides

"Process Mining" capabilities that scan the data logs of the SAP Business Suite to reveal the "real" path a business process takes, often uncovering hidden bottlenecks, manual workarounds, and deviations from the standard procedure.

By positioning Business Process Intelligence as a starting point for digital transformation, SAP BTP allows organizations to make data-backed decisions about where to automate. For example, the tool might discover that a specific regional office takes twice as long to process purchase orders compared to the global average.

Using AI, it can identify the root cause-such as a lack of automation or incorrect master data-and recommend specific BTP services (like SAP Build) to fix the issue. This creates a cycle of continuous improvement, where processes are constantly monitored, analyzed, and optimized, ensuring that the SAP Business Suite operates at peak efficiency and remains aligned with the company's strategic goals.

질문 # 35

How does SAP BTP support predictive analytics in business decision-making?
Note: There are 3 correct answers to this question.

- A. By restricting analytics to financial data.
- B. By leveraging AI and machine learning models.
- C. By requiring only manual data input.
- D. By automating data visualization.
- E. By using SAP Data Intelligence for real-time insights.

정답：**B,D,E**

설명：

SAP BTP provides a comprehensive ecosystem for predictive analytics, moving business decision-making from a reactive to a proactive state. This is achieved through three primary mechanisms. First, by leveraging AI and machine learning models (Option A), BTP services like SAP AI Core allow developers to train models on historical business data to predict future trends, such as customer churn or equipment failure.

Second, the platform automates data visualization (Option B) through SAP Analytics Cloud. This ensures that complex predictive insights are presented in an intuitive, dashboard-driven format that business leaders can easily interpret and act upon, rather than sifting through raw spreadsheets.

Third, the platform utilizes SAP Data Intelligence for real-time insights (Option D). This component orchestrates data from across diverse sources-both SAP and non-SAP-ensuring that the predictive models are fed with the most current and relevant information.

By integrating these three pillars-intelligence (AI /ML), visualization (Analytics), and orchestration (Data Intelligence)-SAP BTP transforms the SAP Business Suite into a forward-looking enterprise system. This allows organizations to anticipate market shifts, optimize their supply chains, and personalize customer interactions with a level of precision that was previously impossible, ultimately driving better business outcomes and long-term sustainability.

질문 # 36

What is the key advantage of using SAP Business Application Studio?

- A. Requires on-premise deployment for all applications.
- B. Provides a cloud-native development environment with modern tooling.
- C. Eliminates the need for full-stack development.
- D. Restricts the use of external DevOps integrations.

정답：**B**

설명：

SAP Business Application Studio (BAS) is the next-generation development environment on SAP BTP, evolving from the previous SAP Web IDE. Its primary advantage lies in providing a cloud-native development environment that mimics a local desktop experience while being accessible entirely via a web browser. It is built on the open-source "Theia" framework (similar to VS Code), which allows developers to use modern tooling, terminal access, and a wide array of extensions tailored specifically for SAP-centric development, such as SAP Fiori, SAP Cloud Application Programming Model (CAP), and mobile development.

Positioning BAS as a core part of the SAP Business Suite ecosystem is crucial because it simplifies the "setup" phase of development. Developers no longer need to configure complex local environments; instead, they use pre-configured "Dev Spaces" optimized for specific business scenarios. This ensures consistency across development teams and streamlines the path from coding to deployment on the SAP BTP Cloud Foundry or Kyma runtimes. By integrating seamlessly with Git for version control and supporting standard DevOps practices, BAS allows enterprises to modernize their development lifecycle, moving away

from legacy monolithic structures toward agile, microservices-based extensions that enhance the core SAP landscape without disrupting it.

질문 # 37

What is a competitive advantage of SAP BTP for businesses?

- A. Eliminates the need for AI-driven automation.
- B. Provides a unified platform for AI, analytics, and automation.
- C. Prevents integration with multi-cloud environments.
- D. Limits businesses to SAP ERP-only solutions.

정답：B

설명：

The primary competitive advantage of SAP BTP lies in its unified nature, bringing together AI, analytics, integration, and automation into a single cohesive platform. Many organizations struggle with "point solutions"-using one vendor for AI, another for database management, and a third for integration. This fragmentation creates technical debt and data silos. SAP BTP solves this by providing a consistent set of tools and a shared data model, which allows for faster innovation and a lower total cost of ownership.

By having these capabilities on a single platform, businesses can create "end-to-end" intelligent scenarios. For example, a company can use Integration Suite to pull data from a third-party CRM, SAP HANA Cloud to process that data in real-time, SAP AI Core to predict customer behavior, and SAP Build Process Automation to trigger a marketing campaign based on those predictions. This level of cross-functional orchestration is difficult to achieve with fragmented systems. Positioning SAP BTP as the "technological foundation" allows businesses to focus on business outcomes rather than managing infrastructure, giving them a significant edge in agility and speed-to-market compared to competitors using traditional, siloed architectures.
