

Valid Dumps NCP-EUC Free | New NCP-EUC Mock Exam

BTW, DOWNLOAD part of Exam4PDF NCP-EUC dumps from Cloud Storage: <https://drive.google.com/open?id=1Zb5J7vWl1-3khgDKByGwgVH4VaGZZtU2>

There are a lot of the functions on our NCP-EUC exam questions to help our candidates to reach the best condition before they take part in the real exam. I love the statistics report function and the timing function most. The statistics report function helps the learners find the weak links and improve them accordingly. The timing function of our NCP-EUC training quiz helps the learners to adjust their speed to answer the questions and keep alert and our NCP-EUC study materials have set the timer.

Nutanix NCP-EUC exam is designed to test the knowledge and skills of IT professionals in the field of end-user computing. NCP-EUC exam is specifically designed for those who have experience in configuring and managing Nutanix infrastructure and want to demonstrate their expertise in the area of end-user computing. NCP-EUC exam covers a range of topics related to end-user computing, including the deployment and management of virtual desktops and applications, user profile management, and endpoint security. NCP-EUC Exam is intended to validate the skills and knowledge of IT professionals who work with Nutanix technology in the context of end-user computing.

Help You Learn Steps Necessary To Pass The NCP-EUC Exam Valid Dumps Free

There are many advantages of our product and it is worthy for you to buy it. You can download and try out our NCP-EUC guide questions demo before the purchase and use them immediately after you pay for them successfully. Once you pay for it, we will send to you within 5-10 minutes. Then you can learn and practice it. We update the NCP-EUC Torrent question frequently and provide the discounts to the old client. We check the update every day, once we update, we will send it to you as soon as possible. There are many benefits to buy NCP-EUC guide torrent such as after the client pass the exam they can enter in the big company and double their wages.

The NCP-EUC Certification Exam is suitable for IT professionals, architects, and engineers who work with end-user computing solutions and want to enhance their skills and knowledge. NCP-EUC exam covers a broad range of topics, including Nutanix

architecture, installation, configuration, and management of Nutanix end-user computing solutions. It is a vendor-neutral certification, meaning that it is not limited to any specific technology or vendor, making it a valuable asset for professionals who want to expand their career prospects.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q111-Q116):

NEW QUESTION # 111

An administrator is tasked with enabling security measures through a STIG to ensure the CVM meets company requirements. Which RHEL STIG version is the Nutanix CVM compliant with?

- A. RHEL 9 STIG
- B. RHEL 6 STIG
- **C. RHEL 8 STIG**
- D. RHEL 7 STIG

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to the latest Nutanix Security Guide (AOS 6.x and later) regarding SCMA (Security Configuration Management Automation):

* OS Evolution: Modern Nutanix Controller VMs (CVMs) in current Long Term Support (LTS) releases (AOS 6.5 and above) utilize an operating system based on RHEL 8 / CentOS 8.

* STIG Compliance: Consequently, the built-in SCMA policies are updated to check and enforce compliance against the RHEL 8 STIG (Security Technical Implementation Guide).

* Correction Note: Older documentation (AOS 5.x) referenced the RHEL 7 STIG. However, per your request for "latest knowledge" applicable to current supported environments, the CVM is compliant with RHEL 8 STIGs. If this question appears on a legacy exam version, the answer might still be listed as C (RHEL 7), but B is the technically correct answer for modern Nutanix software.

NEW QUESTION # 112

An administrator is setting up a storage container to provision Citrix MCS Non-persistent desktops. This storage container is dedicated to these desktops.

Which settings should the administrator select to optimize the storage?

- A. Compression Enabled, Deduplication Enabled, Erasure Coding Disabled
- B. Compression Disabled, Deduplication Enabled, Erasure Coding Disabled
- **C. Compression Enabled, Deduplication Disabled, Erasure Coding Disabled**
- D. Compression Enabled, Deduplication Enabled, Erasure Coding Disabled

Answer: C

Explanation:

According to the "Citrix Virtual Apps and Desktops on Nutanix" best practices guide, the recommended storage container configuration depends on the provisioning method. For Citrix MCS (Machine Creation Services) Non-persistent workloads, the following settings are explicitly recommended in the Nutanix storage table:

* Compression: Enabled (Inline compression is recommended for all workloads to improve capacity and performance).

* Deduplication: Disabled (For non-persistent MCS, the write-heavy differencing disks are deleted upon reboot, making post-process capacity deduplication ineffective. While performance deduplication can help with reads, Nutanix Shadow Clones automatically handle caching of the base image on AHV, rendering deduplication largely redundant and an unnecessary overhead for this specific use case).

* Erasure Coding: Disabled (Erasure coding is not suitable for the random write patterns and "hot" data associated with active VDI desktops; it is designed for cold, archive data).

Therefore, the correct configuration is Compression Enabled, Deduplication Disabled, and Erasure Coding Disabled.

Here are the 100% verified answers and detailed explanations based on the latest Nutanix End User Computing and Best Practices documentation.

NEW QUESTION # 113

An EUC environment is being deployed with non-persistent desktops.

How should an administrator configure OS updates via group policy for the non-persistent desktops organizational unit?

- A. Enable - Always automatically restart at the scheduled time
- B. Disable - Configure automatic updates
- **C. Disable - Allow automatic updates immediate installation**
- D. Enable - Allow automatic updates immediate installation

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix and Microsoft Best Practices for Non-Persistent VDI images:

* Policy Setting: The Group Policy setting "Allow Automatic Updates immediate installation" should be set to Disabled.

* Reasoning: In a non-persistent environment, desktops revert to their base state upon reboot. Allowing automatic updates to install immediately during a user session consumes system resources (CPU/IOPS) and any changes made are discarded when the user logs off and the VM reboots.

* Correct Management: Updates should be applied solely to the Master/Gold Image during a maintenance window. Once the master image is updated and sealed, it is redeployed to the pool.

Disabling immediate installation prevents the "Windows Update" service from attempting to patch transient clones unnecessarily.

NEW QUESTION # 114

An administrator is analyzing performance of an application VM hosted on AHV. The administrator is currently viewing the metrics page on a VM in Prism Central, and wants to be able to quickly review the Storage Controller IOPS graph at a later date.

How can the administrator accomplish this task?

- A. Use Prism Element to refresh the graph.
- **B. Add the metric to an available analysis session.**
- C. Export the current view as a scheduled email.
- D. Generate a dashboard summary report.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to the Prism Central User Guide (Analysis and Planning):

* Analysis Sessions: Prism Central includes a feature called "Analysis" (or Performance Analysis). It allows administrators to create "Sessions" which are essentially saved workspaces.

* Workflow: An administrator can select a specific metric (like Storage Controller IOPS), click "Add to Analysis," and save it to a new or existing session. This allows them to "quickly review... at a later date" by simply opening the saved Analysis Session, which retrieves the data dynamically, rather than relying on static exports or reports.

NEW QUESTION # 115

An administrator has been given a new support role for a group of 1000 users, which are all running Windows 10 Linked Clone virtual desktops,

The administrator learns quickly that the environment has been undersized with constant complaints from the user community around running out of storage. The administrator further discovers that the environment is memory constrained.

Which feature should the administrator enable to help relieve the capacity issue?

- A. Compression
- **B. Deduplication**
- C. Auto-tiering
- D. Erasure Coding

Answer: B

Explanation:

Deduplication is a process that eliminates duplicate data blocks and reduces the amount of storage space required for virtual
