our advanced operation system on the NS0-185 learning guide will automatically encrypt all of the personal information on our NS0-185 practice dumps of our buyers immediately, and after purchasing, it only takes 5 to 10 minutes before our operation system sending our NS0-185 Study Materials to your email address, there is nothing that you need to worry about, and we will spare no effort to protect your interests from any danger and ensure you the fastest delivery.

This updated NS0-185 exam study material consists of NS0-185 PDF dumps, desktop practice exam software, and a web-based practice test. Experts have prepared the NS0-185 desktop-based exam simulation software. There are NS0-185 Actual Questions in the practice test to give you an exact impression of the Network Appliance NS0-185 original test.

Authorized Network Appliance NS0-185 Pdf, Free NS0-185 Vce Dumps

People who study with questions which aren't updated remain unsuccessful in the certification test and waste their valuable resources. You can avoid this loss, by preparing with real NS0-185 Exam Questions of ExamPrepAway which are real and updated. We know that the registration fee for the NetApp Storage Installation Engineer, ONTAP Professional Exam NS0-185 test is not cheap. Therefore, we offer NetApp Storage Installation Engineer, ONTAP Professional Exam NS0-185 real exam questions that can help you pass the test on the first attempt. Thus, we save you money and time.

Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which two statements are true about the LIFs that are used for a cluster peer relationship? (Choose two.)

- A. The LIFs must be in dedicated broadcast domains and IPspaces.
- B. The MTU size must be set to 9000 bytes on all the LIFs used for the cluster peering.
- C. The LIFs must use the default intercluster service policy.
- D. At least one LIF per node is required on each cluster.

Answer: C,D

Explanation:

Cluster peering enables data replication and disaster recovery features such as SnapMirror and SnapVault.

LIF configuration for cluster peering follows specific ONTAP SAN concepts.

Each cluster participating in a peer relationship must have at least one intercluster LIF per node. This ensures redundancy and allows ONTAP to balance replication traffic across nodes.

Additionally, intercluster LIFs must use the default intercluster service policy, which defines the permitted traffic types and security rules required for peering operations.

An MTU of 9000 is recommended but not mandatory. Dedicated broadcast domains or IPspaces are optional and depend on network design.

Therefore, the correct answers are B and D.

NEW QUESTION # 73

You want to monitor and manage storage system parameters such as temperature, voltage, current, and fan speeds over Ethernet. In this scenario, which component is a system-independent resource in the storage system that helps you accomplish this task?

- A. SFP+ port
- B. serial port
- C. USB port
- D. SP port

Answer: D

Explanation:

https://docs.netapp.com/us-en/ontap-sm-classic/online-help-96-97/concept_service_processors.html

NEW QUESTION # 74

A system administrator is configuring volume provisioning. Which two features help optimize storage allocation and improve efficiency when creating flexible volumes?

- A. RAID rebuild priority
- B. Thin provisioning
- C. FC zoning
- D. Autogrow settings

Answer: B,D

Explanation:

Thin provisioning allocates space on demand, and autogrow adjusts volume size dynamically. FC zoning and RAID rebuild priority do not affect volume provisioning efficiency.

NEW QUESTION # 75

You have a 4-node ONTAP 9.8 cluster with a FAS8700 HA pair that serves iSCSI LUNs. You are adding a new AFF A250 HA pair to the cluster with new iSCSI SAN LIFs. You need to allow non-optimized data paths from the AFF A250 nodes to the existing LUNs on the FAS8700 nodes.

In this scenario, which two ONTAP configuration settings must you verify? (Choose two.)

- A. failover groups
- B. port sets
- C. reporting nodes
- D. switch zoning

Answer: B,C

Explanation:

This scenario is about iSCSI SAN path visibility after cluster expansion. ONTAP uses Selective LUN Map (SLM) concepts so that hosts do not automatically see every LUN through every node, which would create unnecessary paths. ONTAP documentation explains that with SLM, when a LUN map is created, the LUN is accessible through paths on the node that owns the LUN and its HA partner, and this behavior is controlled through the `reporting-nodeslist`.

If you want additional paths (including non-optimized paths) from newly added nodes, you must ensure the new nodes can be included in the reporting scope for those LUN mappings. ONTAP provides an explicit mechanism for this: the `lun mapping add-reporting-nodes` command is used before or after data mobility events to add nodes to the reporting-nodes list for a LUN mapping. This directly matches option C (reporting nodes).

However, even if reporting-nodes is expanded, hosts only gain usable iSCSI access if the target LIFs are reachable/allowed. ONTAP documentation describes that portsets can be used with SLM to further restrict access, and when using SLM with portsets,

LUNs are accessible on the set of LIFs included in the portset (on the owning node and its HA partner). Therefore, to "allow non-optimized paths from the AFF A250 nodes," you must verify whether portsets are being used and that the appropriate new iSCSI LIFs are included (or that no restrictive portset blocks them). That makes option A (port sets) the second correct configuration item. Option B (switch zoning) applies to FC fabrics, not iSCSI. Option D (failover groups) affects NAS /management LIF failover behavior and does not control SAN LUN reporting visibility in the way SLM /reporting-nodes and portsets do.

NEW QUESTION # 76

You have completed a base installation and system registration of an AFF A250 system, but you notice that you have one failed drive. Neither "un-failing" nor reseating the drive helped to repair it. You must ensure proper replacement of the failed drive. In this scenario, which two actions should you take? (Choose two.)

- A. Ask the customer to open a technical case with NetApp Support.
- B. Power off the system until the drive has been replaced.
- C. Run Active IQ Config Advisor to collect all the logs on the system.
- D. Ask the customer for a drive with the same capacity and replace it.

Answer: A,C

Explanation:

Tech case required and run Config Advisor for analysis also log collection.

NEW QUESTION # 77

.....

The NS0-185 exam requires a lot of preparation, hard work, and practice to be successful. To pass the NetApp Storage Installation Engineer, ONTAP Professional Exam (NS0-185) test, you need to get updated Network Appliance NS0-185 dumps. These NS0-185 questions are necessary to study for the test and pass it on the first try. Updated NS0-185 Practice Questions are essential prepare successfully for the NetApp Storage Installation Engineer, ONTAP Professional Exam certification exam. But gaining access to updated NS0-185 questions is challenging for the candidates.
