2026 First-grade Cisco 200-901: DevNet Associate Exam Guaranteed Questions Answers

The DevNet Associate Exam (200-901) Desktop-based practice Exam is ideal for applicants who don't have access to the internet all the time. You can use this DevNet Associate Exam (200-901) simulation software without an active internet connection. This 200-901 software runs only on Windows computers. Both practice tests of PDFBraindumps i.e. web-based and desktop are customizable, mimic Cisco 200-901 real exam scenarios, provide results instantly, and help to overcome mistakes.

Cisco DevNet Associate Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which tool is used to block all traffic to the domain by using a single API call?

- A. Cisco Umbrella
- B. Cisco ISE
- C. Cisco Firepower
- D. Cisco AMP

Answer: A

Explanation:

Cisco Umbrella provides DNS-layer security and can block all traffic to a domain using a single API call. This feature is particularly useful for preventing access to malicious sites and enhancing security across the network by controlling domain access.

Cisco DevNet Associate Study Guide: Security with Cisco Umbrella (Chapter 8, Section: DNS-Layer Security and API Integration).

NEW QUESTION # 20

Drag and drop the Dockerfile instructions from the left onto the descriptions on the right. Not all options are used.

FROM ubuntu:12.04	informs Docker that the container listens on the specified network port(s) at runtime
VOLUME["/var/www","/var/log/apache2","/etc/apache2"]	creates a mount point with the specified name
RUN apt-get update && apt-get install -y --force-yes apache2	configures a container that runs as an executable
ENTRYPOINT["/usr/sbin/apache2ctl","-D","FOREGROUND"]	must be the first instruction in the Docker file
EXPOSE 1521	

Answer:

Explanation:

FROM ubuntu:12.04	EXPOSE 1521	informs Docker that the container listens on the specified network port(s) at runtime
VOLUME["/var/www","/var/log/apache2","/etc/apache2"]	VOLUME["/var/www","/var/log/apache2","/etc/apache2"]	creates a mount point with the specified name
RUN apt-get update && apt-get install -y --force-yes apache2	ENTRYPOINT["/usr/sbin/apache2ctl","-D","FOREGROUND"]	configures a container that runs as an executable
ENTRYPOINT["/usr/sbin/apache2ctl","-D","FOREGROUND"]	FROM ubuntu:12.04	must be the first instruction in the Docker file
EXPOSE 1521		

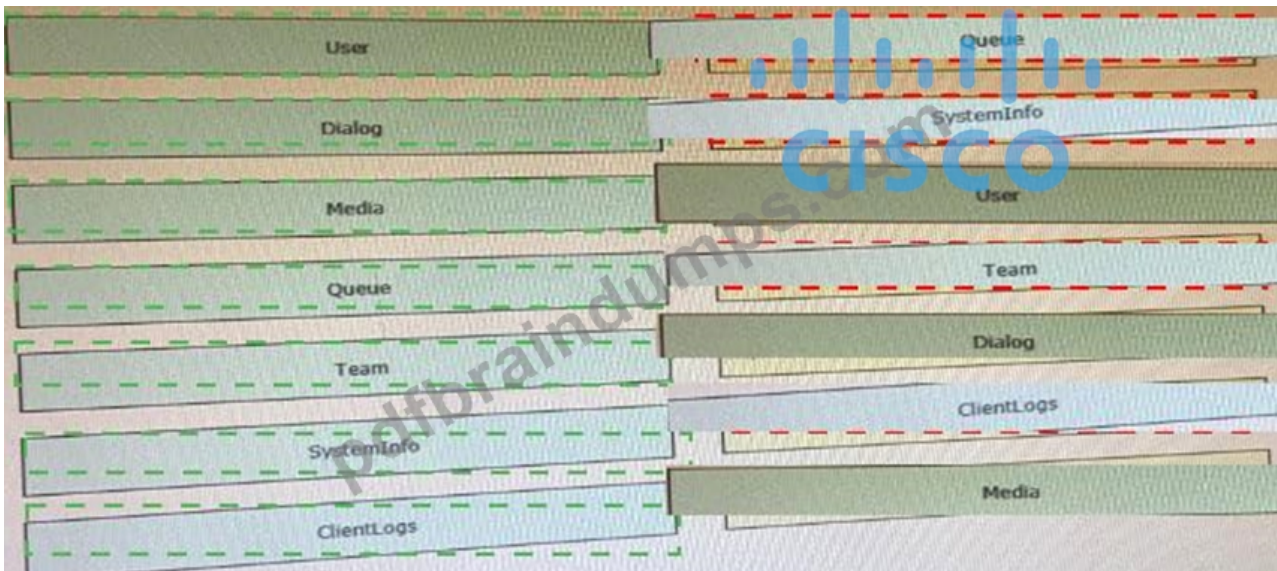

NEW QUESTION # 21

Drag and drop the element of the Finesse API on the left onto the description of its functionality on the right.

User	Represents a skill group in Unified CCE.
Dialog	Represents the current state of the system.
Media	Represents an agent, supervisor or administrator.
Queue	Represents a group of users.
Team	Represents a call and the participants if the media type is voice.
SystemInfo	Sends client-side logging to the Finesse Server.
ClientLog	Represents a user's state in a non-voice Media Routing Domain.

Answer:

Explanation:

Explanation

1 - D, 2 - F, 3 - A, 4 - E, 5 - B, 6 - G, 7 - C

NEW QUESTION # 22

Refer to the exhibit. An administrator configures four switches for local authentication using passwords that are stored as a cryptographic hash. The four switches must also support SSH access for administrators to manage the network infrastructure. Which switch is configured correctly to meet these requirements?

```

SW1(config-line) #line vty 0 15
SW1(config-line) #no login local
SW1(config-line) #password cisco

SW2(config) #username admin1 password abcd1234
SW2(config) #username admin2 password abcd1234
SW2(config-line) #line vty 0 15
SW2(config-line) #login local

SW3(config) #username admin1 secret abcd1234
SW3(config) #username admin2 secret abcd1234
SW3(config-line) #line vty 0 15
SW3(config-line) #login local

SW4(config) #username admin1 secret abcd1234
SW4(config) #username admin2 secret abcd1234
SW4(config-line) #line console 0
SW4(config-line) #login local

```

- A. SW3
- B. SW2
- C. SW1
- D. SW4

Answer: A

Explanation:

Section: Security Fundamentals

NEW QUESTION # 23

```

import requests
url = 'https://api.meraki.com/api/v0/networks/net1/httpServers'
headers = { 'Accept': '+/+' }
response = requests.get(url = URL, headers=HEADERS, verify=False, timeout=5)

```

Refer to the exhibit. A developer creates a Python script by using the Cisco Meraki API. The solution must:

- * Obtain a list of HTTP servers for a network named 'net1'.
- * Print the response body if the HTTP status code is 200.
- * Handle the timeout requests as exceptions, and print Timeout Error next to the exception to stdout.

Which block of code completes the script?

```

except requests.Timeout as e:
    print("Timeout Error: {}".format(e))
if response.status_code == 200:
    print(response.text)

```

- A.

```

except requests.Timeout as exception:
    print("Timeout Error: exception")
if response.status_code == 200:
    print(response)

```

- B.

Answer: A

Explanation:

The block of code that correctly completes the script should handle timeout exceptions and print the error, as well as print the response body if the HTTP status code is 200. Option A achieves this:

```
import requests
url = 'https://api.meraki.com/api/v0/networks/net1/httpServers'
headers = { 'Accept': 'application/json' }
response = requests.get(url=url, headers=headers, verify=False, timeout=5) try:
response = requests.get(url, headers=headers, verify=False, timeout=5)
response.raise_for_status()
except requests.Timeout as e:
print("Timeout Error: {}".format(e))
if response.status_code == 200:
print(response.text)
```

This code makes a GET request to the specified URL, handles the timeout exception by printing a message, and prints the response body if the status code is 200.
