NEW QUESTION # 18
Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- A. Enumerations
- B. User to Group Mapping
- C. Units of Measure
- D. Relation and Relation Entries

Answer: A,D

Explanation:
After migrating configurations using ICM,Enumerations and Relation entries require manual loading into Productionbecause they are not included in automatic migration bundles. Enumerations provide picklist values, while Relations define dependencies between fields. Units of Measure are typically part of standard configuration or migrated automatically. User to Group Mapping is managed separately through provisioning or identity management tools, not via ICM. Manual loading of these data elements ensures data integrity and avoids missing references.

NEW QUESTION # 19

Which of the following accurately describes the migration of flex master data templates using the migration tool?

- A. Only the data of the flex master data templates is migrated; templates must be created manually.
- B. Neither the templates nor the data is migrated using the tool.
- C. The templates are migrated by the tool, but the data must be loaded manually later.
- D. Both the templates and their data are fully migrated by the tool.

Answer: C

Explanation:
In SAP Ariba, the migration tool (Intelligent Configuration Manager - ICM) migratesflex master data templates(the structure and definitions), but it doesnot migrate the actual master data records. The master data itself must be manually exported from the source and imported into thetarget environment after templates are migrated. This separation helps ensure data integrity and allows for more controlled migration processes.
