NEW QUESTION # 32

Which function call returns 0?

- A. find_any_not_of(val 'ABAP ABAP abap' sub = 'AB')
- B. Count (val - 'ABAP ABAP abap' sub - 'AB')
- C. Count_any_of (val - 'ABAP ABAP abap' sub "AB")
- D. find_any_of (val = "ABAP ABAP abap' sub = "AB")

Answer: A

Explanation:
The function find_any_not_of returns the position of the first character in the string val that is not contained in the string sub. If no such character is found, the function returns 0. In this case, the string val contains only the characters A, B, and a, which are all contained in the string sub, so the function returns 0. The other functions return positive values, as follows:
Count_any_of returns the number of occurrences of any character in the string sub within the string val. In this case, it returns 8, since there are 8 A's and B's in val.
Count returns the number of occurrences of the string sub within the string val. In this case, it returns 2, since there are 2 AB's in val.
find_any_of returns the position of the first character in the string val that is contained in the string sub. In this case, it returns 1, since the first character A is in sub. Reference: String Functions - ABAP Keyword Documentation, Examples of String Functions - ABAP Keyword Documentation

SELECT FROM scustom {
KEY id,
KEY 'Customer' AS partner,
name,
city,
country
}
UNION
SELECT FROM stravelag {

KEY agencynum AS id,
'Agency' AS partner,
name,
city,
country
}
When you attempt to activate the definition, what will be the response?

- A. Activation error because the field names of the union do not match
- B. Activation error because the key fields of the union do not match
- C. Activation successful
- D. Activation error because the field types of the union do not match

Answer: A

Explanation:
Comprehensive and Detailed Explanation from Exact Extract:
* In CDS UNION, field names and positions must match exactly across all SELECT statements.
* In this case, the first SELECT uses id, while the second uses agencynum AS id, which is fine.
However, the literal 'Customer' AS partner and 'Agency' AS partner create inconsistencies.
* SAP CDS guidelines specify that for a UNION, field names must be identical and aligned in order; mismatches cause an activation error.
