Juniper JN0-224 PDF Questions - Pass Your Exam With Ease
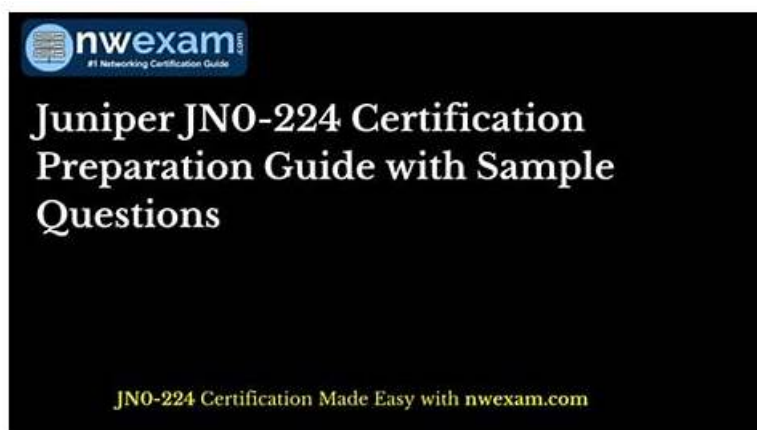

Developing your niche is very easy in the presence of the JN0-224 dumps. The credentials are not very difficult to achieve because like JN0-224 the acclaimed vendors are highly successful in the industry. If you need a boost in your career, then PDFTorrent is the site you have to opt for taking JN0-224 Certification exams. Some of the vital features of the JN0-224 dumps of PDFTorrent are given below. JN0-224 dumps are the most verified and authentic braindumps that are used to pass the JN0-224 certification exam. The whole JN0-224 study material is approved by the expert.

The exam requires an enormous amount of effort and determination and dedication to get to the end goal. PDFTorrent is one of the most reliable platforms that offer an accurate, reliable, and straightforward Juniper JN0-224 dumps to ensure the success of students on the initial try. PDFTorrent offers the complete package that includes all exam dumps conforming to the syllabus for passing the Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam certificate in the first try.

Exam JN0-224 Study Guide - JN0-224 Original Questions

Every working person knows that JN0-224 is a dominant figure in the field and also helpful for their career. If JN0-224 reliable exam bootcamp helps you pass the exams and get a qualification certificate you will obtain a better career even a better life. Our study JN0-224 Guide materials cover most of latest real JN0-224 test questions and answers. If you are certainly determined to make something different in the field, a useful certification will be a stepping-stone for your career.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	• Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Topic 2	• Python • PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 3	• NETCONF • XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.

Topic 4	• Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 5	• Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q14-Q19):

NEW QUESTION # 14
What will determine which data serialization format is used for interfacing with a system?

- A. the operating system
- B. the system's API
- C. programming language version
- D. IDE specifications

Answer: B

NEW QUESTION # 15
Which two statements about the REST API are correct? (Choose two.)

- A. The TCP session state is maintained by the server.
- B. The REST API application is stateful.
- C. The REST API application is stateless.
- D. The TCP session state is maintained by the client

Answer: C,D

Explanation:
REST (Representational State Transfer) is an architectural style for designing networked applications, and its key principles include:
Statelessness (B): Each request from the client to the server must contain all the information needed to understand and process the request. The server does not store any session state between requests, meaning each request is independent and does not rely on previous ones.
TCP Session State (C): While REST itself is stateless, the underlying TCP connection's state, such as keeping the connection alive or managing retries, is handled by the client. The server does not retain information about the TCP connection beyond the processing of the individual request.
Options A and D are incorrect because they imply that the REST API is stateful, which contradicts the stateless nature of REST.
Reference:
REST API Design Principles: Describes the stateless nature of REST and the responsibility of clients in managing session state.
Web Development Documentation: Discusses how REST APIs operate, focusing on statelessness and client-server interaction.

NEW QUESTION # 16
Your organization is developing an application to automate management of Junos network appliances. You want to use the existing PyEZ libraries to improve the development process. Which API would satisfy this requirement?

- A. REST API
- B. XML API
- C. RPC API
- D. JETAPI

Answer: A

NEW QUESTION # 17

Which two processes are used by Junos automation? (Choose two.)

- A. ifd
- B. kmd
- C. mod
- D. jsd

Answer: B,D

Explanation:
Junos automation relies on several key processes to handle various automation and API interactions. Let's break down the two key processes involved:
jsd (Junos Script Daemon):
The jsd process is responsible for handling automation scripts, including Python and SLAX scripts, as well as handling JET (Junos Extension Toolkit) API requests. This process is fundamental in the automation framework of Junos, as it deals with external and internal API requests, ensuring that the necessary scripts are executed when specific triggers or events occur.
kmd (Key Management Daemon):
The kmd process is involved in key management for IPsec and other security services. While its primary function is related to managing cryptographic keys, it plays a role in Junos automation by enabling secure communication and ensuring that automation tasks involving security services (such as automated IPsec tunnel creation) are handled securely.
Why the Other Options Are Incorrect:
A . mod: This process doesn't exist as part of the Junos automation framework. It's likely a distractor.
C . ifd: The ifd process is associated with the physical interfaces on the device and does not play a role in automation or script processing.
Reference from Juniper Documentation:
Junos Automation Processes

NEW QUESTION # 18
Which statement is correct about Ansible playbooks?

- A. A playbook contains one or more tasks written in XML
- B. A playbook is a specific Python module that is executed on a host
- C. A playbook can contain multiple tasks and execute multiple Python modules
- D. A playbook is a configuration file that defines the Ansible related parameters

Answer: C

NEW QUESTION # 19
......

If you purchase our JN0-224 preparation questions, it will be very easy for you to easily and efficiently find the exam focus. More importantly, if you take our products into consideration, our JN0-224 study materials will bring a good academic outcome for you. At the same time, we believe that our JN0-224 training quiz will be very useful for you to have high quality learning time during your learning process.
