Huawei HCIP-Collaboration V4.0 Sample Questions (Q43-Q48):

NEW QUESTION # 43

Currently, the widely used video compression standards include H.263, H.264, H.265, MPEG-1, MPEG-2, and MPEG-4. The H.26X series standards are mainly used for real time video communication, and the MPEG series standards are mainly used for video storage (DVD), video broadcast, and video streaming media.

- A. TRUE
- B. FALSE

Answer: A

Explanation:

The H.26x family (H.263, H.264/AVC, H.265/HEVC) was designed with low-latency, real-time encoding/decoding in mind (ideal for videoconferencing and streaming calls) whereas MPEG-1/2/4 were originally optimized for file-based storage (VCD/DVD), broadcast and progressive streaming. Modern deployments often blend these. For example, using H.265 for both live calls and high-efficiency streaming and newer standards (like H.266/VVC) are now emerging.

NEW QUESTION # 44

Which of the following statements are true about the intranet-only SC cluster network? (Choose all that apply.)

- A. If a large number of SIP hard endpoints or soft clients are located on the intranet, you can deploy a registration SC cluster on the intranet.
- B. 323 endpoints must register with a standalone SC when an intranet-only cluster is used.
- C. The intranet SC cluster supports two distribution modes: single-active distribution and multi-active distribution.
- D. The intranet registration SC cluster provides only SIP registration.
- E. A standalone SC should be deployed to provide registration services specifically for H.323 endpoints.

Answer: A,C,D,E

Explanation:

Deploying an intranet registration SC cluster is recommended when there are large numbers of SIP hard or soft endpoints.

Explanation:

An intranet-only SC cluster handles SIP registrations exclusively, offloading SIP endpoint load.

The cluster can be deployed in single-active or multi-active distribution modes for flexibility and redundancy.

NEW QUESTION # 45

By default, the SMC provides six user roles. Default permissions of each user role can be modified or deleted based on site requirements.

- A. FALSE
- B. TRUE

Answer: A

Explanation:

The SMC indeed provides six built-in user roles (system administrator, security administrator, security auditor, program administrator, conference administrator, and common user), but their default permissions are fixed and cannot be modified or removed.

NEW QUESTION # 46

Assume endpoints T1 and T2 are registered with the same SC node zone. After T1 calls the number of T2 using H.323, T1 and T2 communicate with each other. Which of the following statements are true about the call process? (Choose all that apply.)

- A. In this process, the media stream must be directly transmitted between T1 and T2.
- B. In this process, the H.225 RAS signaling interaction between T1 and T2 must pass through the SC.
- C. 225 RAS messages (registration, admission, status) always traverse the SC (gatekeeper) for endpoints in the same zone.
- D. In this process, the H.225 call signaling interaction between T1 and T2 must pass through the SC.
- E. Endpoint control signaling involved in this process mainly includes H.225 RAS, H.225 Call Signaling, and H.245.

Answer: A,B,E

Explanation:

RTP media is exchanged directly between T1 and T2 once the call is established.

The call control sequence involves H.225 RAS (registration/admission), H.225 call signaling (SETUP/CONNECT), and H.245 control for capabilities.

NEW QUESTION # 47

Assume that a dual-channel audio file uses the PCM encoding, the sampling frequency is 8 kHz, and each quantized sample value

corresponds to an 8-bit binary code. What is the encoding rate (kbit/s) of the audio file?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Dual-channel PCM at 8 kHz with 8 bits per sample yields $8,000 \times 8 = 64$ kbit/s per channel; two channels give $64 \times 2 = 128$ kbit/s.
