There are three different versions for all customers to choose. The three different versions include the PDF version, the software version and the online version, they can help customers solve any questions and meet their all needs. Although the three different versions of our ARA-C01 study materials provide the same demo for all customers, they also have its particular functions to meet different the unique needs from all customers. The most important function of the online version of our ARA-C01 Study Materials is the practicality. The online version is open to any electronic equipment, at the same time, the online version of our ARA-C01 study materials can also be used in an offline state.

Snowflake ARA-C01 (SnowPro Advanced Architect Certification) Certification Exam is an industry-recognized certification that validates the advanced skills and knowledge of professionals in designing and implementing Snowflake solutions. It is a comprehensive exam that covers a wide range of topics, including Snowflake architecture, security, performance optimization, data modeling, and integration with other technologies. SnowPro Advanced Architect Certification certification is ideal for professionals who are responsible for managing Snowflake solutions for their organizations and want to demonstrate their expertise in this area.

ARA-C01 Valid Vce Dumps & ARA-C01 Exam Reviews

SnowPro Advanced Architect Certification exam tests hired dedicated staffs to update the contents of the data on a daily basis. Our industry experts will always help you keep an eye on changes in the exam syllabus, and constantly supplement the contents of ARA-C01 test guide. Therefore, with our study materials, you no longer need to worry about whether the content of the exam has changed. You can calm down and concentrate on learning. At the same time, the researchers hired by ARA-C01 Test Guide is all those who passed the ARA-C01 exam, and they all have been engaged in teaching or research in this industry for more than a decade. They have a keen sense of smell on the trend of changes in the exam questions. Therefore, with the help of these experts, the contents of ARA-C01 exam questions must be the most advanced and close to the real exam.

Snowflake SnowPro Advanced Architect Certification Sample Questions

(Q44-Q49):

NEW QUESTION # 44

A company is trying to Ingest 10 TB of CSV data into a Snowflake table using Snowpipe as part of Its migration from a legacy database platform. The records need to be ingested in the MOST performant and cost-effective way.

How can these requirements be met?

- A. Use FURGE = FALSE in the copy into command.
- B. Use ON_ERROR = continue in the copy into command.
- C. Use on error = SKIP_FILE in the copy into command.
- D. Use purge = TRUE in the copy into command.

Answer: C

Explanation:

For ingesting a large volume of CSV data into Snowflake using Snowpipe, especially for a substantial amount like 10 TB, the on error = SKIP_FILE option in the COPY INTO command can be highly effective. This approach allows Snowpipe to skip over files that cause errors during the ingestion process, thereby not halting or significantly slowing down the overall data load. It helps in maintaining performance and cost-effectiveness by avoiding the reprocessing of problematic files and continuing with the ingestion of other data.

NEW QUESTION # 45

Which of the below commands will use warehouse credits?

- A. SELECT COUNT(*) FROM SNOWFLAKE;
- B. SHOW TABLES LIKE 'SNOWFL%';
- C. SELECT MAX(FLAKE_ID) FROM SNOWFLAKE;
- D. SELECT COUNT(FLAKE_ID) FROM SNOWFLAKE GROUP BY FLAKE_ID;

Answer: D

NEW QUESTION # 46

Which data models can be used when modeling tables in a Snowflake environment? (Select THREE).

- A. Graph model
- B. Dimensional/Kimball
- C. Data vault
- D. Data lake
- E. Bayesian hierarchical model
- F. Inmon/3NF

Answer: B,C,F

NEW QUESTION # 47

The following table exists in the production database:

A regulatory requirement states that the company must mask the username for events that are older than six months based on the current date when the data is queried.

How can the requirement be met without duplicating the event data and making sure it is applied when creating views using the table or cloning the table?

- A. Use a secure view on the user_events table using a case statement on the username column.
- B. Use a masking policy on the username column with event_timestamp as a conditional column.
- C. Use a masking policy on the username column using a entitlement table with valid dates.
- D. Use a row level policy on the user_events table using a entitlement table with valid dates.

Answer: B

NEW QUESTION # 48

A table contains five columns and it has millions of records. The cardinality distribution of the columns is shown below:

Column C4 and C5 are mostly used by SELECT queries in the GROUP BY and ORDER BY clauses.

Whereas columns C1, C2 and C3 are heavily used in filter and join conditions of SELECT queries.

The Architect must design a clustering key for this table to improve the query performance.

Based on Snowflake recommendations, how should the clustering key columns be ordered while defining the multi-column clustering key?

- A. C3, C4, C5
- B. C5, C4, C2
- C. C1, C3, C2
- D. C2, C1, C3

Answer: D

Explanation:
According to the Snowflake documentation, the following are some considerations for choosing clustering for a table1:
* Clustering is optimal when either:
* You require the fastest possible response times, regardless of cost.
* Your improved query performance offsets the credits required to cluster and maintain the table.
* Clustering is most effective when the clustering key is used in the following types of query predicates:
* Filter predicates (e.g. WHERE clauses)
* Join predicates (e.g. ON clauses)
* Grouping predicates (e.g. GROUP BY clauses)
* Sorting predicates (e.g. ORDER BY clauses)
* Clustering is less effective when the clustering key is not used in any of the above query predicates, or when the clustering key is used in a predicate that requires a function or expression to be applied to the key (e.g. DATE_TRUNC, TO_CHAR, etc.).
* For most tables, Snowflake recommends a maximum of 3 or 4 columns (or expressions) per key.
Adding more than 3-4 columns tends to increase costs more than benefits.
Based on these considerations, the best option for the clustering key columns is C. C1, C3, C2, because:
* These columns are heavily used in filter and join conditions of SELECT queries, which are the most effective types of predicates for clustering.
* These columns have high cardinality, which means they have many distinct values and can help reduce the clustering skew and improve the compression ratio.
* These columns are likely to be correlated with each other, which means they can help co-locate similar rows in the same micro-partitions and improve the scan efficiency.
* These columns do not require any functions or expressions to be applied to them, which means they can be directly used in the predicates without affecting the clustering.
