To demonstrate their expertise in this platform, Salesforce offers a certification exam called the Salesforce Certified B2C Commerce Architect.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q60-Q65):

### NEW QUESTION # 60

Which two activities should an Architect encourage the replication team to follow based on S2C Commerce best practices?  
Choose 2 answers

- A. Use the undo replication process to roll back to the previous replication if necessary.

- B. Use the undo replication process to roll back code replications only, not data replications.
- C. Wait 15 minutes after the recreation process completes for the cache to clear automatically.
- D. Replicate the latest data to Production during periods of increased site use to ensure freshness.

**Answer: A,B**

Explanation:

\* Option A (Use the undo replication process to roll back to the previous replication if necessary):

This best practice ensures that if a replication introduces errors or issues, there is a way to quickly revert to a previous state without impacting the ongoing operations of the commerce site.

\* Option C (Use the undo replication process to roll back code replications only, not data replications): Focusing undo operations on code replication rather than data ensures that functional issues caused by code changes can be quickly addressed without affecting the integrity or consistency of the data within the system.

These practices help maintain the stability and reliability of the production environment by providing mechanisms to manage and mitigate risks associated with updates and changes.

### NEW QUESTION # 61

A company wants to add Salesforce Order Management to their existing B2C Commerce, Service Cloud, and Sales Cloud integration. Their current sales process lets sales reps build quotes, create orders, and process reduction orders for refunds as part of their sales channel workflow. Their B2C Commerce order objects also include multiple custom attributes that the merchant's current Order Management System uses to allocate orders to the correct distribution center for fulfillment.

When enabling Salesforce Order Management, what potential concerns will the merchant need to work through?

- A. Reduction Orders and Order Management change orders conflict if both are enabled in the same Org and require the use of Record Types and Apex Triggers or Validation Rules to avoid conflicts.
- B. Custom attributes on B2C Commerce Orders are not natively supported for Salesforce Order Management integrations and require custom Apex development to handle mapping.
- C. Salesforce Order Management integrates natively with B2B Commerce when both products reside within the same Org but requires the use of a customizable B2C Commerce cartridge to import data from a B2C Commerce instance.
- D. Salesforce Order Management does not allow for fulfillment rules across multiple distribution centers without the use of an AppExchange package or custom Apex triggers.

**Answer: C**

### NEW QUESTION # 62

Northern Trail Outfitters (NTO) just went live after migrating its online shop to B2C Commerce from a custom eCommerce platform. NTO now needs to migrate its orders. NTO cannot provide a B2C Commerce feed, but a custom export Web from its current eCommerce site.

What are the correct steps to migrate these orders to B2C Commerce?

- A. Receive the orders file and use a Job to generate the orders in B2C Commerce schema. Create a B2C Commerce Support ticket to ask them to import the orders.
- B. Receive the orders file and use a job to generate the orders in B2C Commerce schema. Ask the client to import them on production before the launch.
- C. Receive the orders file and use a Job to place new orders in B2C Commerce with the order data received.
- D. Create a B2C Commerce Support ticket and ask them to import the order files received from Northern Trail Outfitters.

**Answer: A**

### NEW QUESTION # 63

A B2C Commerce Developer has just finished implementing a new promotion code form on checkout. During review, an Architect notes that the form is not using CSRF validation correctly.

Which two options are best practice recommendations for dealing with CSRF validation? Choose 2 answers

- A. Ensure the CSRF protection is validated on form submission.
- B. Only use GET methods over HTTPS.
- C. Only use POST methods over HTTPS.

- D. Automatically renew the CSRF Token if expired.

**Answer: A,C**

Explanation:

For implementing CSRF (Cross-Site Request Forgery) protection correctly, especially in forms like promotion code submissions during checkout, best practices include:

\* Option A (Ensure the CSRF protection is validated on form submission): It is crucial to validate the CSRF token upon the form's submission to ensure that the request originates from a legitimate source and corresponds to the user's intended actions, enhancing security against CSRF attacks.

\* Option D (Only use POST methods over HTTPS): Using POST methods for transmitting form data helps mitigate the risk of CSRF attacks as opposed to GET methods which can be manipulated more easily via URL. Ensuring the communication is over HTTPS encrypts the transmission, securing the data from interception or tampering during transit.

These practices safeguard against common security vulnerabilities and ensure that the application adheres to secure coding standards.

#### NEW QUESTION # 64

The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations.

Which environment should be used as the ideal environment for this kind of load test?

- A. The Production Instance of a rental Realm
- B. The Development Instance of a rental Realm
- C. The Production instance of the existing Realm
- **D. The Development Instance of the existing Realm**

**Answer: D**

Explanation:

For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.
