

# 100% Free Salesforce-MuleSoft-Developer-I–100% Free Reliable Braindumps Ebook | High Pass-Rate Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Exam

DOWNLOAD the newest ValidDumps Salesforce-MuleSoft-Developer-I PDF dumps from Cloud Storage for free:  
[https://drive.google.com/open?id=16XttLKyLi\\_QFIFRK3BAB6nTP-YIrZaj](https://drive.google.com/open?id=16XttLKyLi_QFIFRK3BAB6nTP-YIrZaj)

The go-to resource for effective and efficient Salesforce exam preparation is ValidDumps Salesforce Salesforce-MuleSoft-Developer-I practice material in three formats. Our updated Salesforce questions are available in these three different formats: web-based practice test, desktop practice exam software, and Salesforce PDF file of real exam questions. The goal of these formats is to aid test candidates in preparing for the Salesforce Salesforce-MuleSoft-Developer-I test according their styles.

## Salesforce Salesforce-MuleSoft-Developer-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Designing APIs: Designing APIs involves describing the lifecycle of the modern API and using RAML to define various aspects of an API. It includes identifying when to use query parameters vs URI parameters, and defining API parameters.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Handling Errors: Handling errors includes describing default error handling in Mule applications and defining custom global default error handlers. It involves comparing On Error Continue and On Error Propagate scopes, creating error handlers for a flow, using the Try scope, and mapping errors to custom application errors.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Debugging and Troubleshooting Mule Applications: Using breakpoints to inspect a Mule event during runtime, installing missing Maven dependencies, and reading and deciphering Mule log error messages are sub-topics of this topic.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Processing Records: Processing records includes methods for processing individual records in a collection and explaining how Mule events are processed by the For Each scope. It also involves using the Batch Job with Batch Steps and a Batch Aggregator.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Deploying and Managing APIs and Integrations: It includes packaging Mule applications for deployment and deploying them to CloudHub. This topic also involves using CloudHub properties, creating and deploying API proxies, connecting an API implementation to API Manager, and applying policies to secure an API.</li></ul>

Topic 6	<ul style="list-style-type: none"> <li>Using Connectors: It focuses on retrieving data from REST services using HTTP Request or REST Connector. Moreover, the topic covers using a Web Service Consumer connector for SOAP web services and the Transform Message component.</li> </ul>
---------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Salesforce-MuleSoft-Developer-I Sample Exam | Exam Salesforce-MuleSoft-Developer-I Questions Pdf

It is acknowledged that high-quality service after sales plays a vital role in enhancing the relationship between the company and customers. Therefore, we, as a leader in the field specializing in the {Examcode} exam material especially focus on the service after sales. In order to provide the top service after sales to our customers, our customer agents will work in twenty four hours, seven days a week. So after buying our Salesforce-MuleSoft-Developer-I Study Material, if you have any doubts about the {Examcode} study guide or the examination, you can contact us by email or the Internet at any time you like. We Promise we will very happy to answer your question with more patience and enthusiasm and try our utmost to help you out of some troubles. So don't hesitate to buy our {Examcode} test torrent, we will give you the high-quality product and professional customer services.

### Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q23-Q28):

#### NEW QUESTION # 23

A flow contains an HTTP Listener as the event source. What is the DataWeave expression to log the Content-Type header using a Logger component?

- A. #[ "Content-Type: " ++ headers.'content-type']
- B. #[ "Content-Type: " + headers.'content-type']
- C. #[ "Content-Type: " ++ attributes.headers.'content-type']
- D. #[ "Content-Type: " + attributes.headers.'content-type']

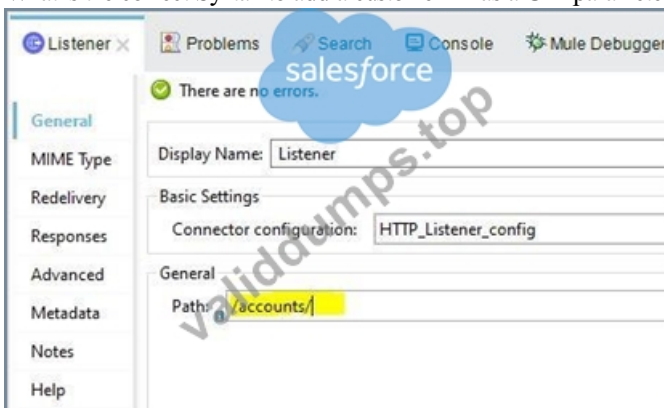

**Answer: C**

Explanation:

Option 1 is the only correct choice due to two reasons. 1) Concatenation is always with ++ sign and not with + sign which makes option 2 and 3 wrong 2) headers can be accessed with attributes. headers and not with only headers which makes option 4 incorrect

#### NEW QUESTION # 24

What is the correct Syntax to add a customer ID as a URI parameter in the HTTP listener's path attribute?

- A. \${customerID}
- B. (customerID)
- C. #{customerID}
- D. {customerID}

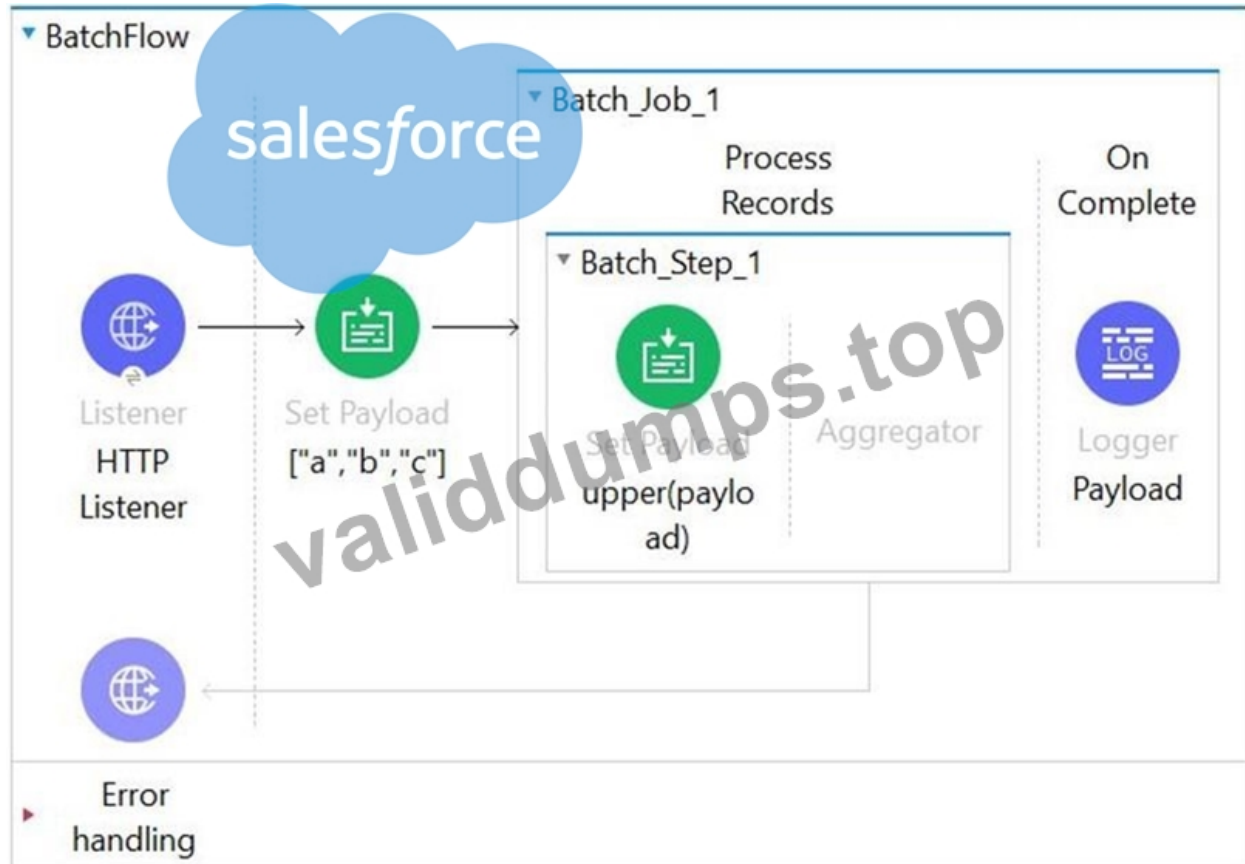

Answer: D

Explanation:

URL parameters are always accessed using { } like => {customerID}

### NEW QUESTION # 25

Refer to the exhibits.

```
<flow name="BatchFlow" doc:id="7f72df3e-46cc-49b4-918f-5e0374eb03c2" >
  <http:listener doc:name="HTTP Listener" doc:id="c530cc32-b45c-479f-9b02-0a0f8ba2a198" config-ref="HTTP Listener config" path="/" />
  <set-payload value="#[["a","b","c"]]" doc:name=["a","b","c"]" doc:id="bb9a9940-252f-45e5-87db-45579a74" />
  <batch:job jobName="Batch_Job_1" doc:id="793599e9-fa2b-41ef-b246-d1ba975fd14d" >
    <batch:process-records >
      <batch:step name="Batch_Step_1" doc:id="a7c8931e-9c22-4fa8-8ac6-633586bd8f57" >
        <set-payload value="#[upper(payload)]" doc:name="upper(payload)" doc:id="5e1e08e7-58a7-4ca5-9178-852b4a1e9e9e" />
      </batch:step>
    </batch:process-records>
    <batch:on-complete >
      <logger level="INFO" doc:name="Payload" doc:id="703bd1cb-2b0f-423a-a9ea-f26e28280862" message="#[payload]" />
    </batch:on-complete>
  </batch:job>
</flow>
```

The Batch job processes an array of strings.

What information is logged by the logger component after the batch job scope completes processing of the input payload?

- A. ["A","B","C"]
- B. Total Records Processed: 3Successful Records: 3Failed Records: 0payload: ["A","B","C"]
- C. Total Records Processed: 3Successful Records: 3Failed Records: 0
- D. Total Records Processed: 3Successful Records: 3Failed Records: 0payload: ["a", "b", "c"]

Answer: C

Explanation:

Correct answer is as below. On complete phase only has access to batch job result statistics and payload is not available.

\* TotalRecordsProcessed:3

\* SuccessfulRecords:3

\* FailedRecords:0

On Complete

During this phase, you can optionally configure the runtime to create a report or summary of the records it processed for the

particular batch job instance. This phase exists to give system administrators and developers some insight into which records failed to address any issues that might exist with the input data.

Sample output is as below

```

> Logger = Logger
> attributes = null
  correlationId = "0-f4e689c0-7137-11e9-952f-e4f89c9c8380"
  payload = [ImmutableBatchJobResult] com.mulesoft.mule.runtime.module.batch.internal.ImmutableBatchJobResult@13c7b2ac
    ^mediaType = */*
    batchJobInstanceId = "06386fe0-7138-11e9-952f-e4f89c9c8380"
    elapsedTimeInMillis = 4746
    failedOnCompletePhase = false
    failedOnInputPhase = false
    failedOnLoadingPhase = false
    failedRecords = 0
    inputPhaseException = {Exception} null
    loadedRecords = 3
    loadingPhaseException = {Exception} null
    onCompletePhaseException = {Exception} null
    processedRecords = 3
    serialVersionUID = 4323747859995526737
  stepResults = {Unrecorded}
    successfulRecords = 3
    totalRecords = 3
  vars = {Map} size = 1
  
```

Mule Ref Doc : <https://docs.mulesoft.com/mule-runtime/4.3/batch-processing-concept#on-complete>

**NEW QUESTION # 26**

A shopping API contains a method to look up store details by department To get information for a particular store, web clients will submit requests with a query parameter named department and a URI parameter named storeId.

What is a valid RAML snippet that supports requests from web clients to get data for a specific storeId and department name?

- A. 

```
get:
  queryParameters:
    department:
  uriParameters:
    storeId:
```
- B. 

```
/department:
  get:
    uriParameter:
      storeId:
```
- C. 

```
/{storeId}:
  get:
    queryParameters:
      department:
```
- D. 

```
get:
  uriParameters:
    {storeId}:
  queryParameters:
    department:
```

**Answer: C**

Explanation:

Lets revise few concepts RAML which can help us to find the answer of this question.

URI Parameters

Lets have a look at below example.

- \* /foos:
- \* /{id}:
- \* /name/{name}:

Here, the braces { } around property names define URI parameters. They represent placeholders in each URI and donot reference root-level RAML file properties as we saw above in the baseUrl declaration. The added lines represent the resources /foos/{id} and

/foos/name/{name}.

### Query Parameters

Now we'll define a way to query the foos collection using query parameters. Note that query parameters are defined using the same syntax that we used above for data types:

- \* /foos:
- \* get:
- \* description: List all Foos matching query criteria, if provided;
- \* otherwise list all Foos
- \* queryParameters:
- \* name?: string
- \* ownerName?: string

Based on the above information, below is the only option which defines storeId as uri parameter and department as query parameter.

- \* /{storeId}:
- \* get:
- \* queryParameter:
- \* department:

### NEW QUESTION # 27

Refer to the exhibit.

```
#%RAML 1.0
title: Accounts API
version: 1.0

/accounts:
  get:
    description: Get all accounts
    responses:
      200:
        body:
          application/json:
            example:
              id: "48292"
              name: Geordi La Forge
              address: 1 Forge Way, Midgard, CA 95928
              customer_since: "2014-01-04"
              balance: 4829.29
  post:
    description: Create an account
    body:
      application/json:
        example:
          name: Geordi La Forge
          address: 1 Forge Way, Midgard, CA 95928
          customer_since: "2014-01-04"
```

What data is expected by the POST /accounts endpoint?

```
<item>
  <name>Geordi La Forge</name>
  <address>1 Forge Way, Midgard, CA 95928</address>
  <customer_since>2014-01-04</customer_since>
  <balance>4829.29</balance>
  <bank_agent_id>48-SJT-282924-KL</bank_agent_id>
</item>
```

- A.

- B. 

```
{
  "id": "48292",
  "name": "Geordi La Forge",
  "address": "1 Forge Way, Midgard, CA 95928",
  "customer_since": "2014-01-04",
  "balance": 4829.29
}
```
- C. 

```
{
  "name": "Geordi La Forge",
  "address": "1 Forge Way, Midgard, CA 95928",
  "customer_since": "2014-01-04",
  "balance": 4829.29
  "bank_agent_id": "48-SJT-282924-KL"
}
```
- D. 

```
<item>
  <id>48292</id>
  <name>Geordi La Forge</name>
  <address>1 Forge Way, Midgard, CA 95928</address>
  <customer_since>2014-01-04</customer_since>
  <balance>4829.29</balance>
</item>
```

Answer: C

## NEW QUESTION # 28

.....

After the client pay successfully they could receive the mails about Salesforce-MuleSoft-Developer-I guide questions our system sends by which you can download our test bank and use our study Salesforce-MuleSoft-Developer-I STUDY materials in 5-10 minutes. The mail provides the links and after the client click on them the client can log in and gain the Salesforce-MuleSoft-Developer-I Study Materials to learn. The procedures are simple and save clients' time. For the client the time is limited and very important and our product satisfies the client's needs to download and use our Salesforce-MuleSoft-Developer-I practice engine immediately.
