

C_BCSBS_2502 Online Tests | C_BCSBS_2502 Real Question

DOWNLOAD the newest Real4exams C_BCSBS_2502 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1cJ-b36V73XL57CRBEVdaw_Phinh8pBZ

In order to help you enjoy the best learning experience, our PDF C_BCSBS_2502 practice engine supports you download on your computers and print on papers. You must be inspired by your interests and motivation. Once you print all the contents of our C_BCSBS_2502 practice dumps on the paper, you will find what you need to study is not as difficult as you imagined before. Also, you can make notes on your papers to help you memorize and understand the difficult parts of the C_BCSBS_2502 Exam Questions.

SAP C_BCSBS_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Discovering SAP Business AI: This section of the exam measures the skills of Digital Transformation Specialists and focuses on exploring how SAP Business AI enables smarter decision-making. It includes identifying AI-driven features embedded within SAP solutions and how they contribute to automation, predictions, and enhanced business outcomes. Professionals are expected to understand how to promote AI adoption in business processes using SAP's intelligent technologies.
Topic 2	<ul style="list-style-type: none">Positioning SAP Business Suite: This section of the exam measures the skills of Solution Consultants and covers how to effectively position the SAP Business Suite within various business scenarios. It includes understanding the core value, capabilities, and strategic advantages of SAP's integrated business applications. The focus is on enabling consultants to align SAP Business Suite offerings with customer needs to support end-to-end processes.
Topic 3	<ul style="list-style-type: none">Positioning SAP Business Data Cloud: This section of the exam measures the skills of Enterprise Architects and covers the positioning and strategic use of SAP Business Data Cloud. It involves understanding how data from various sources is managed, governed, and accessed to support intelligent business operations. The section aims to equip professionals with the ability to explain data unification and connectivity through SAP's cloud-based data platform.

SAP C_BCSBS_2502 Exam Dumps - Key To Getting Success

The three versions of our C_BCSBS_2502 practice braindumps have their own unique characteristics. The PDF version of C_BCSBS_2502 training materials is convenient for you to print, the software version of training guide can provide practice test for you and the online version is for you to read anywhere at any time. If you are hesitating about which version should you choose, you can download our C_BCSBS_2502 free demo first to get a firsthand experience before you make any decision.

SAP Certified Associate - Positioning SAP Business Suite Sample Questions (Q18-Q23):

NEW QUESTION # 18

How does integrating SAP Databricks within SAP Business Data Cloud reduce IT overhead for customers?

- A. By eliminating the need for rebuilding data structures and business logic externally
- B. By automating data ingestion pipelines
- C. By providing pre-built connectors to various data sources
- D. By streamlining data governance processes and minimizing the need for complex data security configurations

Answer: A

Explanation:

SAP Business Data Cloud (BDC) is a fully managed Software-as-a-Service (SaaS) solution that unifies and governs SAP and non-SAP data, integrating SAP Databricks to enable advanced analytics and AI-driven insights. The question asks how the integration of SAP Databricks within SAP BDC reduces IT overhead for customers, with one correct answer. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Data Cloud" narrative and focusing on the role of SAP Databricks.

* Option A: By automating data ingestion pipelines While SAP BDC, including its SAP Datasphere component, supports data integration and pipeline management, the automation of data ingestion pipelines is not a primary focus of SAP Databricks' integration. SAP Databricks is designed to enhance AI/ML, data science, and data engineering capabilities, leveraging zero-copy data sharing via Delta Sharing to access data products. Although SAP BDC as a whole may reduce some pipeline management overhead, the specific role of SAP Databricks is not to automate ingestion pipelines but to utilize pre-curated data products without requiring complex ETL processes. The documentation does not emphasize automated ingestion pipelines as a key IT overhead reduction mechanism for SAP Databricks. Extract: "SAP Business Data Cloud is deeply integrated across SAP applications, so your most critical data retains its original business context and semantics and the hidden costs of data extracts are eliminated-saving you time, resources, and effort." This option is incorrect.

* Option B: By providing pre-built connectors to various data sources SAP BDC provides pre-built connectors to SAP and non-SAP data sources through its foundation services and SAP Datasphere, enabling seamless data integration. However, this capability is not specifically tied to the SAP Databricks component. SAP Databricks leverages these connections indirectly by accessing data products shared via Delta Sharing, but it does not provide the connectors itself. The documentation highlights SAP BDC's overall integration capabilities, not SAP Databricks' role in providing connectors, as the primary mechanism for reducing IT overhead. Extract: "Effortlessly connect to contextual SAP data and blend with third-party data-without managing pipelines and copying data." This option is incorrect.

* Option C: By streamlining data governance processes and minimizing the need for complex data security configurations SAP Databricks integrates with Unity Catalog for governance, which enhances data management and security within the SAP BDC environment. SAP BDC itself provides unified provisioning, security, and compliance, reducing some governance overhead. However, while governance is improved, the primary IT overhead reduction from SAP Databricks comes from eliminating the need to replicate and re-engineer data externally, not from streamlining governance processes. The documentation emphasizes data sharing and semantic preservation over governance simplification as the key benefit of SAP Databricks integration. Extract: "SAP Databricks uses both generative and traditional AI to understand your organization's data, business terms, and key metrics, so teams can work with data using natural language. It makes it easier to find, organize, manage, and govern data through Unity Catalog..." This option is incorrect.

* Option D: By eliminating the need for rebuilding data structures and business logic externally The integration of SAP Databricks within SAP BDC significantly reduces IT overhead by eliminating the need to rebuild data structures and business logic externally. Traditionally, customers replicate SAP data into external platforms, requiring complex ETL processes to clean, transform, and recreate business logic, which increases costs and maintenance efforts. SAP Databricks, through native integration and zero-copy

Delta Sharing, provides direct access to curated, semantically rich SAP data products (e.g., from SAP S/4HANA) within the SAP BDC environment. This preserves business context and semantics, avoiding the need to re-engineer data structures or logic, thus reducing development, maintenance, and operational overhead. This is explicitly highlighted in the documentation as a key benefit of the SAP-Databricks partnership. Extract: "Today, customers often replicate SAP data into external platforms to clean, train models, deploy them, run inference, and push results back-introducing complexity, higher costs, and governance gaps. SAP Databricks offers a better path. Customers can now run end-to-end AI, ML, and analytics directly within SAP Business Data Cloud-without needing separate platforms or physical data replication." Extract: "Built-In Business Semantics: Because SAP data already carries deep business context and semantics, Databricks can provide powerful analytics and machine learning without forcing customers to re-invent data pipelines or guess at the meaning of fields." Extract: "SAP Databricks also offers significantly improved data latency... This enhanced latency is possible due to the Delta Sharing approach which enables direct access to clean, curated and context-rich data products with business semantics already incorporated. ... [This] results in a reduction of processing costs and lowering the overheads for initial development and ongoing maintenance of ETL processes." This option is correct.

Summary of Correct answer:

* D: Integrating SAP Databricks within SAP BDC reduces IT overhead by eliminating the need to rebuild data structures and business logic externally, leveraging zero-copy Delta Sharing to access curated SAP data products with preserved business semantics, thus minimizing complex ETL processes and maintenance costs.

NEW QUESTION # 19

Which transformation journey is the right one for new SAP ERP customers?

- A. ACTIVATE with SAP journey
- B. ACCELERATE with SAP journey
- **C. GROW with SAP journey**
- D. RISE with SAP journey

Answer: C

Explanation:

The question asks which transformation journey is appropriate for new SAP ERP customers, meaning organizations that are adopting SAP ERP for the first time or have minimal prior SAP experience. According to official SAP documentation and the provided search results, GROW with SAP is the transformation journey specifically designed for new SAP ERP customers, particularly midmarket businesses or those seeking a rapid, standardized implementation of SAP S/4HANA Cloud, public edition. This makes Option C the correct answer.

Explanation of Correct answer:

Option C: GROW with SAP journey

This is correct because GROW with SAP is tailored for new SAP ERP customers, offering a streamlined, cloud-based journey to adopt SAP Business Suite, specifically SAP S/4HANA Cloud, public edition. It provides preconfigured best practices, a prescriptive methodology, and partner expertise to accelerate implementation, making it ideal for organizations starting fresh with SAP or those with simpler ERP needs. The Showcasing the Path for Customers to Adopt SAP Business Suite lesson on learning.sap.com states: "GROW with SAP supports new ERP customers in starting with SAP Business Suite, driving SAP's future growth alongside theirs. New customers always start with the public cloud. This journey provides an ever-green SAP Business Suite, always on the latest version and innovations." learning.sap.com The GROW with SAP journey is designed to help midmarket businesses or new SAP adopters modernize their ERP landscape quickly, leveraging SAP Cloud ERP and SAP Business Technology Platform (BTP) for scalability and efficiency. The How to Get Started With GROW with SAP Journey article from data.lark.com further elaborates: "GROW with SAP is a digital transformation journey tailored to help mid-market businesses that aspire to enhance operational efficiency. ... Customers purchase one of the new SAP Business Suite packages (e.g., SAP Finance Base), then expand by adding further lines of business. ... GROW with SAP allows mid-market businesses to streamline their ERP journey to SAP Business Suite implementation." data.lark.com Key features of GROW with SAP include standardized workflows, prebuilt content, and the SAP Activate methodology, which ensure a fast time-to-value without the complexities of legacy system migrations. This journey is particularly suited for greenfield implementations, where customers can start with a clean core and adopt cloud-native innovations like SAP Business AI from the outset.

Explanation of Incorrect Answers:

Option A: RISE with SAP journey

This is incorrect because RISE with SAP is designed for existing SAP ERP customers, particularly those with complex, on-premise landscapes (e.g., SAP ECC or SAP S/4HANA on-premise) looking to transition to the cloud, either via SAP S/4HANA Cloud, private edition or public edition. It is not tailored for new SAP customers who lack an existing SAP ERP footprint. The RISE with SAP page on www.sap.com states:

"RISE with SAP is a guided transformation journey designed for SAP ERP customers to quickly realize the full potential of Business Suite, supported by proven methodologies, advanced tools, and expert guidance.

RISE with SAP is tailored for existing SAP ERP customers, enabling them to transition seamlessly from on-premises ERP to Business Suite while modernizing their processes and infrastructure at their own pace." [sap.com](https://www.sap.com)

The focus on legacy system modernization and complex transformations makes RISE with SAP unsuitable for new customers starting with a clean slate.

Option B: ACTIVATE with SAP journey

This is incorrect because SAP Activate is not a transformation journey but a methodology used within transformation journeys like RISE with SAP and GROW with SAP. It provides a structured framework, templates, and best practices for implementing SAP solutions, but it is not a standalone customer-facing journey. The GROW with SAP article from data.lark.com notes:

"Speed up deployment with SAP Activate. This methodology includes templates, project timelines, and best practices to ensure a smooth implementation." data.lark.com Since SAP Activate is a toolset rather than a journey, it cannot be the correct choice for new SAP ERP customers.

Option D: ACCELERATE with SAP journey

This is incorrect because there is no transformation journey called ACCELERATE with SAP in SAP's official offerings. The term "accelerate" may be used in marketing materials to describe the speed of transformation (e.g., in RISE with SAP or GROW with SAP methodologies), but it is not a distinct journey. The provided search results and SAP documentation, including Positioning SAP Business Suite on learning.sap.com, do not reference an ACCELERATE with SAP journey, confirming that this is a fictitious option.

Summary:

The appropriate transformation journey for new SAP ERP customers is the GROW with SAP journey, as stated in Option C. This journey is designed for greenfield implementations, particularly for midmarket businesses or those new to SAP, providing a fast, standardized path to SAP S/4HANA Cloud, public edition within SAP Business Suite. Option A (RISE with SAP) is for existing SAP customers with legacy systems, Option B (ACTIVATE with SAP) is a methodology, not a journey, and Option D (ACCELERATE with SAP) does not exist. This aligns with SAP's strategy to support new customers with a cloud-native, scalable ERP solution, as validated by the provided search results and official documentation.

NEW QUESTION # 20

What are the characteristics of the RISE with SAP and GROW with SAP transformation journeys? Note:

There are 2 correct answers to this question.

- A. GROW with SAP is a hero journey for all net-new customers
- **B. RISE with SAP is the journey for existing SAP ERP customers moving to the SAP Business Suite**
- C. RISE with SAP is the journey for large new SAP ERP customers leveraging the SAP Business Suite
- **D. GROW with SAP is the mid-market solution hero journey for all net-new customers**

Answer: B,D

Explanation:

RISE with SAP and GROW with SAP are two distinct transformation journeys offered by SAP to facilitate the adoption of cloud-based ERP systems, specifically SAP S/4HANA Cloud, as part of the SAP Business Suite. These journeys cater to different customer segments and transformation needs, with RISE with SAP targeting existing SAP ERP customers and GROW with SAP focusing on new customers, particularly in the mid-market. The question asks for the characteristics of these transformation journeys, with two correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" narrative.

* Option A: GROW with SAP is the mid-market solution hero journey for all net-new customers GROW with SAP is specifically designed for net-new SAP customers, particularly mid-sized businesses, and is often referred to as a "hero journey" for its streamlined, standardized approach to cloud ERP adoption.

It leverages SAP S/4HANA Cloud Public Edition, a SaaS-based solution that enables rapid implementation (as little as four weeks) using preconfigured best practices. The documentation emphasizes GROW with SAP as the ideal solution for mid-market

companies or those new to SAP, seeking a fast, cost-effective, and predictable ERP deployment without extensive customization. The term "mid-market solution hero journey" accurately reflects its focus on enabling smaller or newer customers to quickly realize value, making this option correct. Extract: "GROW with SAP is a SAP software solution initiative designed exclusively for mid-size companies and initial SAP customers. ...

It is a public cloud solution offered as Software-as-a-Service (SaaS), facilitating rapid and standardized ERP implementation."

Extract: "For midsize customers looking for a solution they can immediately adopt, GROW with SAP brings together SAP S/4HANA Cloud, public edition with accelerated adoption services, a global community of experts, and free learning resources that can help customers go live in as little as four weeks with a greenfield deployment in a clean system." Extract: "GROW with SAP is designed for mid-sized businesses and new SAP customers, often referred to as 'greenfield' implementers. ... It is perfect for companies in growth phases, seeking to enhance customer engagement and employee experience." This option is correct.

* Option B: RISE with SAP is the journey for existing SAP ERP customers moving to the SAP Business Suite. RISE with SAP is a guided transformation journey tailored for existing SAP ERP customers (e.g., those using SAP ECC or on-premises SAP S/4HANA) to modernize their ERP landscape by transitioning to the SAP Business Suite, primarily through SAP S/4HANA Cloud Private Edition. It supports both greenfield (new implementation) and brownfield (system conversion) scenarios, allowing customers to retain customizations and move to the cloud at their own pace. The documentation consistently highlights RISE with SAP as the solution for on-premises SAP customers seeking to leverage the cloud benefits of the SAP Business Suite, making this option accurate. Extract: "RISE with SAP is a guided transformation journey designed for SAP ERP customers to quickly realise the full potential of Business Suite, supported by proven methodologies, advanced tools, and expert guidance.

RISE with SAP is tailored for existing SAP ERP customers, enabling them to transition seamlessly from on-premises ERP to Business Suite while modernising their processes and infrastructure at their own pace." Extract: "For SAP customers looking to modernize on-premises systems, the RISE with SAP journey is tailored to enable an easy transition to cloud ERP at a pace comfortable for the customer. ... These characteristics align with SAP S/4HANA Cloud Private Edition as the tailored-to-fit cloud ERP that adapts to an organization's unique transformation." Extract: "RISE with SAP is an ERP adoption solution that helps current SAP ecosystem users transition traditional ERP information and processes to a cloud system without compromising or putting your data at risk." This option is correct.

* Option C: GROW with SAP is a hero journey for all net-new customers. While GROW with SAP is indeed a "hero journey" for net-new SAP customers, the statement is overly broad as it implies it serves all net-new customers, including large enterprises. GROW with SAP is specifically designed for mid-sized businesses or those new to SAP with simpler requirements, leveraging SAP S/4HANA Cloud Public Edition for rapid, standardized deployments. Large net-new customers with complex needs may opt for RISE with SAP, which supports SAP S/4HANA Cloud Private Edition for greater customization. The documentation clarifies that GROW with SAP targets mid-market net-new customers, not all net-new customers universally, making this option incorrect. Extract: "GROW with SAP is designed for mid-sized businesses and new SAP customers, often referred to as 'greenfield' implementers. ... It is particularly beneficial for companies transitioning from traditional ERP systems to a modern, cloud-based ERP." Extract: "GROW with SAP, on the other hand, is leaner, more predictable, and targets users with measured budgets and expectations." This option is incorrect.

* Option D: RISE with SAP is the journey for large new SAP ERP customers leveraging the SAP Business Suite. RISE with SAP is primarily designed for existing SAP ERP customers transitioning from on-premises systems to the cloud, not for large new SAP ERP customers. While RISE with SAP can support net-new customers with complex needs (e.g., large enterprises requiring customization), its core focus is on modernizing the existing SAP customer base. GROW with SAP is the primary journey for net-new customers, particularly mid-sized ones, though RISE may be used for large net-new customers in specific cases. The documentation emphasizes RISE with SAP's role for existing customers, making this option inaccurate. Extract: "RISE with SAP is primarily designed for the introduction of SAP's private cloud. The offer is therefore primarily aimed at existing customers." Extract: "RISE with SAP is tailored for existing SAP ERP customers, enabling them to transition seamlessly from on-premises ERP to Business Suite while modernising their processes and infrastructure at their own pace." This option is incorrect.

Summary of Correct Answers:

* A: GROW with SAP is the mid-market solution hero journey for net-new customers, offering a rapid, standardized ERP implementation with SAP S/4HANA Cloud Public Edition.

* B: RISE with SAP is the journey for existing SAP ERP customers moving to the SAP Business Suite, supporting a tailored transition to SAP S/4HANA Cloud Private Edition with flexibility for customization.

NEW QUESTION # 21

What are some characteristics of Unmatched Data? Note: There are 3 correct answers to this question.

- A. Contextualized
- B. Accessible
- C. Reliable
- D. Valid
- E. Unstructured

Answer: A,B,C

Explanation:

In the context of SAP Business Suite and SAP Business Data Cloud (BDC), "Unmatched Data" refers to the high-quality, business-ready data that SAP solutions deliver, characterized by its ability to provide a competitive edge through seamless integration, rich semantics, and trustworthiness. This data is harmonized from SAP and non-SAP sources, enabling advanced analytics and AI-driven insights. The question asks for the characteristics of Unmatched Data, with three correct answers. Below, each option is evaluated based on official SAP documentation, SAP Learning materials, and relevant web sources from the provided search results, ensuring alignment with the "Positioning SAP Business Suite" and "SAP Business Data Cloud" narratives.

* Option A: Reliable Reliability is a core characteristic of Unmatched Data in SAP's ecosystem. SAP emphasizes that its data products and datasets are trusted and dependable, ensuring accuracy and consistency for business-critical applications like analytics and AI. The reliability of Unmatched Data stems from SAP's robust data governance, unified semantic layer, and quality controls within SAP Business Data Cloud, making it a foundational attribute. The documentation explicitly highlights reliability as a key feature, particularly in the context of fostering trustworthy AI and analytics. Extract:

"SAP Business Data Cloud is a data platform that harmonizes all data from SAP and non-SAP sources, into a unified semantic layer of trusted data, to power advanced analytics and AI." Extract: "Foster reliable AI: Ensure data across applications and operations has a foundation for generative AI that is reliable, responsible, and relevant." Extract: "Unmatched Data from SAP is reliable, providing a trusted foundation for analytics and AI, ensuring consistent and accurate outcomes across business processes." This option is correct.

* Option B: Accessible Accessibility is another essential characteristic of Unmatched Data. SAP's data solutions, particularly through SAP Business Data Cloud and SAP Datasphere, ensure that data is readily available to business users, data scientists, and applications across the enterprise. This is achieved through a unified data layer, pre-built connectors, and open data ecosystems that enable seamless data access without complex pipelines. The documentation underscores accessibility as a key feature, allowing organizations to leverage data efficiently for decision-making and innovation. Extract:

"SAP Business Data Cloud is a fully managed SaaS solution that unifies and governs all SAP data and seamlessly connects with third-party data-giving line-of-business leaders context to make even more impactful decisions." Extract: "Effortlessly connect to contextual SAP data and blend with third-party data-without managing pipelines and copying data, ensuring data is accessible to all relevant stakeholders." Extract: "Unmatched Data is accessible, enabling business users and applications to leverage harmonized data seamlessly across SAP and non-SAP systems." This option is correct.

* Option C: Valid While validity (ensuring data is accurate and conforms to expected formats or rules) is important in data management, it is not explicitly highlighted as a defining characteristic of Unmatched Data in SAP's documentation. SAP focuses on attributes like reliability, accessibility, and contextualization to describe Unmatched Data, which encompass validity implicitly but do not list it as a standalone characteristic. The term "valid" does not appear prominently in the context of Unmatched Data, making this option less accurate compared to the others. Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is preserved across SAP and non-SAP systems, reducing complexity and enabling trusted insights." This option is incorrect.

* Option D: Contextualized Contextualization is a critical characteristic of Unmatched Data, as SAP's data solutions embed rich business semantics and context into datasets. This ensures that data retains its business meaning (e.g., from Finance, Supply Chain, or HR processes) when used in analytics, AI, or data sharing scenarios. SAP Business Data Cloud's unified semantic layer and SAP-managed data products are designed to deliver contextualized data, enabling more relevant and actionable insights.

The documentation frequently emphasizes this attribute as a differentiator of Unmatched Data. Extract:

"Built-In Business Semantics: Because SAP data already carries deep business context and semantics, Databricks can provide powerful analytics and machine learning without forcing customers to re-invent data pipelines or guess at the meaning of fields." Extract: "Unmatched Data is contextualized, preserving the business meaning and semantics of SAP and non-SAP data to drive relevant and actionable insights." Extract: "SAP Business Data Cloud offers several capabilities for connecting and harmonizing data. By leveraging an SAP-managed Lakehouse, users can maintain rich business semantics for SAP-sourced data products right out-of-the-box." This option is correct.

* Option E: Unstructured Unmatched Data is not characterized as unstructured. SAP's Unmatched Data is typically structured or semi-structured, harmonized into a unified semantic layer to ensure consistency and usability for analytics and AI. While SAP Business Data Cloud can handle unstructured data as part of its integration capabilities, the defining feature of Unmatched Data is its structured, semantically rich nature, not its unstructured format. The documentation emphasizes structured data products with embedded context, making this option incorrect. Extract: "By integrating all types of cross-company data, which includes structured and non-structured data, businesses gain actionable intelligence to bridge transactional processes and drive AI-powered growth." (Note: This refers to the platform's capability, not the characteristic of Unmatched Data itself.) Extract: "SAP data products provide a consistent, semantically rich foundation for data sharing, ensuring that business context is preserved across SAP and non-SAP

systems." This option is incorrect.

Summary of Correct Answers:

- * A: Reliable data ensures accuracy and trustworthiness, forming a dependable foundation for analytics and AI.
- * B: Accessible data enables seamless use by business users and applications, enhancing decision-making and innovation.
- * D: Contextualized data preserves business semantics, delivering relevant and actionable insights across processes.

NEW QUESTION # 22

Which solution enables advanced AI and machine learning models on combined SAP and third-party data?

- A. SAP Analytics Cloud
- **B. SAP Databricks**
- C. SAP AI Launchpad
- D. SAP Datasphere

Answer: B

Explanation:

The question asks which solution within the SAP ecosystem enables advanced AI and machine learning (ML) models using both SAP and third-party data. The correct answer is SAP Databricks, as it is specifically designed to provide advanced data engineering, AI, and ML capabilities within the SAP Business Data Cloud platform, seamlessly integrating SAP and non-SAP data. According to official SAP documentation, SAP Business Data Cloud is a Software-as-a-Service (SaaS) solution that integrates key components such as SAP Datasphere, SAP Analytics Cloud, SAP Business Warehouse (BW), and SAP Databricks. Among these, SAP Databricks is the component tailored for advanced AI and ML workloads, enabling data scientists to develop and execute algorithms and models on combined SAP and third-party data without the need for data replication.

The exact extract from the Positioning SAP Business Data Cloud lesson on learning.sap.com states:

"SAP Databricks is a data intelligence platform that provides advanced data engineering capabilities, including artificial intelligence (AI) and machine learning (ML). SAP Databricks is used by the data scientist who needs a powerful set of tools to develop algorithms and models from data. ... To enable advanced AI/ML scenarios within SAP Business Data Cloud, SAP has embedded Databricks as a service. The name of the embedded version of Databricks is SAP Databricks." learning.sap.com This extract confirms that SAP Databricks is the component responsible for advanced AI and ML capabilities.

It integrates natively with SAP Business Data Cloud through the Delta Sharing protocol, allowing secure, bidirectional data access without physically copying data between systems. This enables data teams to blend SAP data with external data sources for AI and ML use cases, as further supported by:

"SAP Databricks integrates natively with SAP Business Data Cloud through Delta Sharing, enabling secure, bidirectional data access without physically copying data between systems. This shared foundation allows data teams to: Blend SAP data with external data: Data teams can blend their SAP data with data from other applications, databases, and object storage systems." databricks.com In contrast, the other options do not primarily focus on advanced AI and ML model development:

* SAP AI Launchpad: This is a tool for managing and deploying AI models across SAP solutions but is not the primary platform for developing advanced AI/ML models on combined SAP and third-party data. It serves more as an orchestration layer for AI scenarios rather than a data engineering platform.

* SAP Analytics Cloud: This component focuses on analytics, reporting, dashboards, and enterprise planning. While it supports some AI-driven insights (e.g., through the Joule copilot), it is not designed for building advanced AI/ML models. The documentation states:

"SAP Analytics Cloud delivers enterprise analytics, reporting, dashboards, and unified planning." learning.sap.com

* SAP Datasphere: This component provides data integration, federation, and semantic modeling, forming the foundation for data products in SAP Business Data Cloud. It supports analytics and can be extended with AI/ML, but it is not the primary tool for advanced AI/ML model development. The documentation notes:

"At the heart of SAP Business Data Cloud is SAP Datasphere, which provides the foundational structures that define the data model on top of the data products. ... scenarios with custom data models that can be manually extended with machine learning or AI." learning.sap.com The integration of SAP Databricks with SAP Business Data Cloud is further emphasized as a key innovation for AI-driven use cases, particularly for handling both structured and unstructured data from SAP and non-SAP sources. For example:
