Splunk SPLK-1004 Certification Exam Cost: Splunk Core Certified Advanced Power User - Dupleader One Year Free Updates

Splunk SPLK-1004 exam materials of Dupleader is developed in accordance with the latest syllabus. At the same time, we also constantly upgrade our training materials. So our exam training materials is simulated with the practical exam. So that the pass rate of Dupleader is very high. It is an undeniable fact. Through this we can know that Dupleader Splunk SPLK-1004 Exam Training materials can brought help to the candidates. And our price is absolutely reasonable and suitable for each of the candidates who participating in the IT certification exams.

Splunk Core Certified Advanced Power User Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which of the following drilldown methods does not exist in dynamic dashboards?

- A. Contextual Drilldown
- **B. Static Drilldown**
- C. Custom Drilldown
- D. Dynamic Drilldown

Answer: B

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

In Splunk dashboards, drilldown methods define how user interactions with visualizations (such as clicking on a chart or table) trigger additional actions or navigate to more detailed information. Understanding the available drilldown methods is crucial for designing interactive and responsive dashboards.

Drilldown Methods in Dynamic Dashboards:

A:Contextual Drilldown:

* Explanation:Contextual drilldown refers to the default behavior where clicking on a visualization element filters the dashboard based on the clicked value. For example, clicking on a bar in a bar chart might filter the dashboard to show data specific to that category.

B:Dynamic Drilldown:

* Explanation:Dynamic drilldown allows for more advanced interactions, such as navigating to different dashboards or external URLs based on the clicked data. This method can be customized using tokens and conditional logic to provide a tailored user experience.

C:Custom Drilldown:

* Explanation:Custom drilldown enables developers to define specific actions that occur upon user interaction. This can include setting tokens, executing searches, or redirecting to custom URLs. It provides flexibility to design complex interactions beyond the default behaviors.

D:Static Drilldown:

* Explanation:The term "Static Drilldown" is not recognized in Splunk's documentation or dashboard configurations. Drilldowns in Splunk are inherently dynamic, responding to user interactions to provide more detailed insights. Therefore, "Static Drilldown" does not exist as a method in dynamic dashboards.

Conclusion:

Among the options provided,Static Drilldownis not a recognized drilldown method in Splunk's dynamic dashboards. Splunk's drilldown capabilities are designed to be interactive and responsive, allowing users to explore data in depth through contextual, dynamic, and custom interactions.

NEW QUESTION # 25

Which of the following are potential string results returned by the typeof function?

- A. True, False, Unknown
- B. Field, Value, Lookup
- C. Number, String, Bool
- **D. Number, String, Null**

Answer: D

Explanation:

The typeof function in Splunk returns a string representing the data type of the evaluated expression. The possible results include "Number", "String", and "Null".

NEW QUESTION # 26

What XML element is used to pass multiple fields into another dashboard using a dynamic drilldown?

- **A. <link field="sources_field_name">**
- B. <pass_token field="sources_field_name">
- C. <drilldown field="sources_Field_name">
- D. <condition field="sources_Field_name">

Answer: A

Explanation:

In Splunk Simple XML for dashboards, the <link> element is used within a <drilldown> configuration to pass multiple fields to another dashboard using dynamic drilldown.

NEW QUESTION # 27

Which of the following is accurate about cascading inputs?

- A. Only the final input of the sequence can supply a token to searches.
- B. The final input has no impact on previous inputs.
- C. They can be reset by an event handler.
- D. Inputs added to panels cannot participate.

Answer: C

Explanation:

Cascading inputs allow one input's selection to determine the options available in subsequent inputs. An event handler can reset the cascading sequence based on user interactions, ensuring the following inputs reflect appropriate options based on prior selections.

NEW QUESTION # 28

When would a distributable streaming command be executed on an indexer?

- A. If some of the preceding search commands are executed on the indexer, and a timerchart command is used.
- B. If all preceding search commands are executed on the indexer.
- C. If all preceding search commands are executed on the indexer, and a streamstats command is used.
- D. If any of the preceding search commands are executed on the search head.

Answer: B

Explanation:

A distributable streaming command would be executed on an indexer if all preceding search commands are executed on the indexer, enhancing search efficiency by processing data where it resides.

A distributable streaming command is executed on an indexer if all preceding search commands are executed on the indexer. This ensures that the entire pipeline up to that point can be processed locally on the indexer without requiring intermediate results to be sent to the search head.

Here's why this works:

* Distributable Streaming Commands: These commands process data in a streaming manner and can run on indexers if all prior commands in the pipeline are also distributable. Examples include `eval`, `fields`, `andrex`.

* Execution Location: For a command to execute on an indexer, all preceding commands must also be distributable. If any non-distributable command (e.g., `stats`, `transaction`) is encountered, processing shifts to the search head.

NEW QUESTION # 29

.....

Attending Dupleader, you will have best exam dumps for the certification of SPLK-1004 exam tests. We offer you the most accurate SPLK-1004 exam answers that will be your key to pass the certification exam in your first try. There are the best preparation materials for your SPLK-1004 Practice Test in our website to guarantee your success in a short time. Please totally trust the accuracy of questions and answers.
