If you are ready to prepare for test questions and answers by PDF file or soft test engine in order to master better knowledge and skills, CAD valid practice exam online will be a nice choice.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which one of the following is the baseline behavior of a table in a privately-scoped application?

- A. Any Business Rule can read, write, delete, and update from the table
- B. Only artifacts in the table's application can read from the table
- C. All application scopes can read from the table
- D. The table and its data are not accessible using web services

Answer: C

Explanation:

https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_DefaultDesignAccessPermissions.html

NEW QUESTION # 61

Access Control debug information identifies whether each element of an Access Control granted or denied access. The elements appear in the debug information in the order of evaluation. In which order are the elements of an Access Control evaluated?

- A. Roles, Conditions, Script
- B. Conditions, Script, Roles
- C. Script, Conditions, Roles
- D. Conditions, Roles, Script

Answer: A

Explanation:

"The sequence is ROLES first, then condition, then script." - Chuck Tomasi says so at this link: <https://www.servicenow.com/community/grc-forum/order-of-execution-of-an-acl/m-p/1311962/highlight/true#M6538>

NEW QUESTION # 62

When working in the Form Designer, configuring the label of a field in a child table changes the label on which table(s)?

- A. base table
- B. all tables
- C. parent table
- D. child table

Answer: D

Explanation:

Configuring the label of a field in a child table changes the label only on that table, not on the base table or the parent table. The base table is the table that contains the common fields for all the extended tables, and the parent table is the table that is directly extended by the child table. The label of a field on the base table or the parent table can be different from the label on the child table.

NEW QUESTION # 63

Which of the following objects does a Display Business Rule NOT have access to?

- A. previous
- B. g_scratchpad
- C. GlideSystem
- D. current

Answer: A

Explanation:

A Display Business Rule has access to the current, g_scratchpad, and GlideSystem objects, but not the previous object. The previous object is only available to Before Business Rules. References: Business Rule API

https://docs.servicenow.com/bundle/tokyo-application-development/page/script/business-rules/concept/c_BusinessRules.html

NEW QUESTION # 64

Which ATF Test step allows you to create a user with specified roles and groups for the test?

- A. Create a group
- B. Impersonation
- C. Create a role
- D. Create a user

Answer: D

Explanation:

The Automated Test Framework (ATF) is a tool that allows you to create and run automated tests on the ServiceNow platform. The ATF uses test steps to define the actions and validations for each test. The test step that allows you to create a user with specified roles and groups for the test is the Create a user test step. This test step creates a temporary user record that is deleted at the end of the test. You can specify the user name, password, roles, and groups for the user. You can also use the Impersonate a user test step to switch to the created user and perform actions as that user.

The other options are not valid test steps for creating a user. The Create a role and Create a group test steps do not exist in the ATF. To create a role or a group, you need to use the Create a record test step and specify the sys_user_role or sys_user_group table. The Impersonation test step does not create a user, but switches to an existing user.
