## Lab PDII-JPN Questions - Online PDII-JPN Bootcamps

Whether you want to improve your skills, expertise or career growth, with PDFBraindumps's PDII-JPN training and PDII-JPN certification resources help you achieve your goals. Our exams files feature hands-on tasks and real-world scenarios; in just a matter

of days, you'll be more productive and embracing new technology standards. Our online resources and events enable you to focus on learning just what you want on your timeframe. You get access to every exams files and there continuously update our study materials; these exam updates are supplied free of charge to our valued customers. Get the best PDII-JPN Exam Training; as you study from our exam-files.

## Salesforce Sample Questions (Q147-Q152):

### NEW QUESTION # 147

ページが連絡先に対して「null オブジェクトを逆参照しようとした」エラーをスローします。コントローラーのどのような変更を行うとエラーが修正されますか？

- A. (o) ゲッターの条件を使用して、新しい連絡先が null の場合にそれを返します。  
G 連絡先を返すように設定者の署名を変更します。
- B. コントローラーの上部で静的な最終コンタクトを宣言します。
- C. ゲッターの署名を静的な Contact に変更します。

Answer: A

Explanation:

The best way to fix the error is to use a condition in the getter to return a new Contact if it is null. This way, the developer can avoid the attempt to dereference a null object error, which occurs when the developer tries to access a property or a method of a null object. By checking if the sObject attribute is null, and returning a new Contact instance if it is, the developer can ensure that the sObject attribute is always initialized and can be used in the Visualforce page. Declaring a static final Contact at the top of the controller will not fix the error, as it will not initialize the sObject attribute, and it will also prevent the Contact from being modified. Changing the setter's signature to return a Contact will not fix the error, as it will not affect the getter, and it will also violate the setter's convention, which is to return void. Changing the getter's signature to be static Contact will not fix the error, as it will not initialize the sObject attribute, and it will also prevent the getter from accessing the instance variables of the controller. Reference: [Visualforce Controllers], [Apex Properties], [Apex Developer Guide]

### NEW QUESTION # 148

Visualforce ページは、表示されるデータが大量であるため、読み込みに時間がかかります。開発者はパフォーマンスを向上させるためにどの戦略を使用できますか？

- A. ページで <apex:actionPoller) を使用して、すべてのデータを非同期的にロードします。
- B. カスタム コントローラーで使用されるリスト変数に transient キーワードを使用します。
- C. コントローラーのコンストラクターではなく、遅延読み込みを使用してオンデマンドでデータを読み込みます。
- D. Javascript を使用して、データ処理をコントローラーではなくブラウザに移します。

Answer: C

### NEW QUESTION # 149

ビジネスルールでは、新しいアカウントの作成時に常に連絡先を作成する必要があります。カスタム画面を開発するときに、連絡先の作成が失敗した場合にアカウントが作成されないようにするには何を使用できますか？

- A. setSavepoint (1) および rollback() を try-catch ブロックとともに使用します。
- B. 連絡先の検証ルールを無効にし、トリガーでデフォルト値を設定します。
- C. データベースを使用します。連絡先の挿入が失敗した場合の削除メソッド。
- D. データベースを使用します。allOrNone SEL LO alec を使用した Insect メソッド、

Answer: A

Explanation:

The best way to ensure that an Account is not created if the creation of the Contact fails is to use setSavepoint() and rollback() with a try-catch block. This way, the developer can mark a point in the transaction before inserting the Account, and then catch any exception that occurs when inserting the Contact. If an exception is caught, the developer can roll back the transaction to the savepoint, which will undo the insertion of the Account. Using the Database.insert method with allOrNone set to false will allow partial success, but it will not prevent the creation of the Account if the Contact fails. Using the Database.delete method if the

Contact insertion fails will delete the Account, but it will consume an extra DML statement and might cause other side effects. Disabling validation rules on Contacts and setting default values with a trigger will not ensure the creation of the Contact, and might compromise the data quality and integrity. Reference: [Savepoints and Rollbacks], [Database Class], [Apex Developer Guide]

#### NEW QUESTION # 150

以下のマークアップを参照してください。

```
<template>
  <!-- ... some code ... -->
  <lightning-record-form
    record-id={recordId}
    object-api-name="Account"
    layout-type="Full">
  </lightning-record-form>
</template>
```

Lightning Web コンポーネントには、取引先名と2つのカスタム項目が表示されます。荒地に存在する275。カスタムフィールドが正しく宣言され、値が設定されています。ただし、開発者は、コンポーネントの動作が遅いという苦情を受けています。開発者はパフォーマンスを向上させるために何ができるでしょうか？

- A. レイアウトタイプ="1"をフィールド={フィールド}に置き換えます。
- B. Layout-type="Full1"をLayout-type="Partial"に置き換えます。
- C. コンポーネントにdensity="compat"を追加します。
- D. コンポーネントにcache="true"を追加します。

**Answer: A**

Explanation:

To improve performance, the developer should specify only the fields needed by using the fields attribute in the lightning-record-form instead of loading all fields with layout-type="Full". This reduces the amount of data being retrieved and processed, thus improving the component's performance. References: Lightning Web Components Developer Guide - lightning-record-form

#### NEW QUESTION # 151

リアルタイム通知が必要ない場合に、開発者がユーザが最後に Salesforce にログインした時期を確認できる Salesforce 機能はどれですか？

- A. イベント監視ログ
- B. 非同期データキャプチャイベント
- C. 開発者ログ
- D. カレンダーイベント

**Answer: A**

Explanation:

Event Monitoring Log provides the ability to track different types of events in Salesforce, including user logins. These logs can be used to determine the last login time of a user without the need for real-time notification. References: Salesforce Help - Event Monitoring

## NEW QUESTION # 152

.....

When you are hesitating whether to purchase our PDII-JPN exam software, why not try our free demo of PDII-JPN.
