

Reliable GH-900 Dumps Pdf, Test GH-900 Collection

P.S. Free 2026 Microsoft GH-900 dumps are available on Google Drive shared by Exam-Killer: <https://drive.google.com/open?id=1djxvp481q13Sn8x76D4u9HyUQRBFLhee>

Do you wonder why so many peers can successfully pass GH-900 exam? Are also you eager to obtain GH-900 exam certification? Now I tell you that the key that they successfully pass the exam is owing to using our GH-900 exam software provided by our Exam-Killer. Our GH-900 exam software offers comprehensive and diverse questions, professional answer analysis and one-year free update service after successful payment; with the help of our GH-900 Exam software, you can improve your study ability to obtain GH-900 exam certification.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub’s tools and best practices for conducting and managing code reviews.
Topic 2	<ul style="list-style-type: none"> • Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.
Topic 3	<ul style="list-style-type: none"> • Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI • CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.

Topic 4	<ul style="list-style-type: none"> • Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 5	<ul style="list-style-type: none"> • Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Test Microsoft GH-900 Collection & GH-900 Latest Version

Top choice of GH-900 Help You Gain Success in GitHub Foundations. Use Valid Microsoft New Free GH-900 - GitHub Foundations. Real GH-900 exam questions updates from Exam-Killer. Microsoft certification test preparation journey today. Best of Luck! GH-900 certification is a valuable certification that will recognize your expertise and knowledge in the modern IT world. Exam-Killer's exam preparation can enable you to pass the GitHub Foundations exam easily. You can get help from GH-900 Practice Test.

Microsoft GitHub Foundations Sample Questions (Q73-Q78):

NEW QUESTION # 73

Who can be assigned to an Issue or pull request?
(Each answer presents a complete solution. Choose two.)

- A. Anyone with write permissions to the repository
- B. Anyone who has commented on the Issue or pull request
- C. Anyone who has an enterprise GitHub account
- D. Anyone who has a personal GitHub account

Answer: A,B

Explanation:

In GitHub, issues and pull requests (PRs) are essential tools for managing work and collaboration in a project. Assigning individuals to these issues or PRs is a way to indicate responsibility for addressing the issue or completing the PR.

Anyone with write permissions to the repository:

Users who have write permissions to a repository can be assigned to issues and pull requests. Write permissions allow users to push changes to the repository, create branches, and modify issues and pull requests. Assigning them to an issue or PR ensures they are recognized as responsible for the task.

Anyone who has commented on the Issue or pull request:

GitHub allows you to assign issues or pull requests to users who have already engaged with the discussion by commenting on it. This feature is particularly useful for quickly assigning tasks to those who are already involved in the conversation.

Incorrect Options:

Option A is incorrect because having an enterprise GitHub account alone does not necessarily grant the ability to be assigned to issues or PRs. Permission to assign is based on repository-specific roles and permissions.

Option C is incorrect because not all personal GitHub accounts can be assigned to issues or PRs. The user needs either write permissions to the repository or must have commented on the issue or PR.

GitHub Docs: Assigning Issues and Pull Requests

GitHub Docs: Permission Levels for a Repository

This detailed explanation provides clarity on GitHub's assignment mechanics for issues and pull requests, reflecting the platform's collaborative nature.

NEW QUESTION # 74

Which GitHub tools or features is best to quickly modify a batch of files in a repository?

- **A. Install and use GitHub Desktop.**
- B. Create and use a new GitHub Codespace.
- C. Use github.dev from a web browser.
- D. Install and use the git CLI.
- E. Install and use GitHub Mobile.

Answer: A

NEW QUESTION # 75

What is the difference between Git and GitHub?

- **A. Git is a command-line tool for tracking file changes, while GitHub is a platform for collaborating on Git repositories.**
- B. Git is a centralized version control system, while GitHub is a cloud-based collaboration platform.
- C. Git is a cloud-based hosting service, while GitHub is a distributed version control system.
- D. Git and GitHub are different names for the same tool that is used for version control and collaboration.

Answer: A

NEW QUESTION # 76

What type of operations has Git been optimized for?

- **A. local file manipulation and offline work**
- B. cloud-based operations and synchronization
- C. remote collaboration and real-time editing
- D. web development and browser-based coding

Answer: A

Explanation:

In a distributed version control system like Git, developers download source code -- along with a full version history -- to their machine. Once the full repository is downloaded, they can make changes locally--which makes local commits, diffs, and merges fast.

Incorrect:

[Not B] Git is a version control system, and it's not intended for real-time collaboration. Rather it's for when multiple people all work

offline in parallel on the same file(s).

NEW QUESTION # 77

What is the purpose of GitHub Sponsors?

- **A. It allows the developer community to financially support open source projects.**
- B. It provides a channel for GitHub to support open source projects.
- C. It offers a way for companies to purchase software on GitHub.
- D. It funds the most popular open source projects based on stars.

Answer: A

Explanation:

GitHub Sponsors is a program designed to provide a platform for developers and companies to financially support open-source projects and their maintainers.

* Financial Support for Open Source Projects:

* Option D is correct because the main purpose of GitHub Sponsors is to allow members of the developer community, including individuals and organizations, to financially support open- source projects and maintainers. This helps sustain open-source development by providing developers with the resources they need to continue their work.

* Incorrect Options:

* Option A is incorrect because GitHub Sponsors is not based on project popularity (e.g., stars); it is based on voluntary

contributions.

* Option B is incorrect because while GitHub provides the platform, the purpose of GitHub Sponsors is not for GitHub itself to fund projects, but to enable the broader community to do so.

* Option C is incorrect because GitHub Sponsors is not a marketplace for purchasing software but a platform for supporting developers.
