## 100% Pass Quiz Salesforce - Mule-Arch-202 - High-quality Exam Salesforce Certified MuleSoft Platform Integration Architect Consultant

To keep up with the newest regulations of the Mule-Arch-202 exam, our experts keep their eyes focusing on it. Our Mule-Arch-202 exam torrent are updating according to the precise of the real exam. Our Mule-Arch-202 test prep to help you to conquer all difficulties you may encounter. Once you choose our Mule-Arch-202 Quiz torrent, we will send the new updates for one year long, which is new enough to deal with the exam for you and guide you through difficulties in your exam preparation.

## Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q57-Q62):

NEW QUESTION # 57

An organization is automating its deployment process to increase the reliability of its builds and general development process by automating the running of tests during its builds.

Which tool is responsible for automating its test execution?

- A. MUnit
- B. Mule Maven plugin
- **C. MUnit Maven plugin**
- D. Anypoint CLI

**Answer: C**

#### NEW QUESTION # 58

An organization is sizing an Anypoint Virtual Private Cloud (VPC) to extend its internal network to CloudHub 1.0. For this sizing calculation, the organization assumes three production-type environments will each support up to 150 Mule application deployments. Each Mule application deployment is expected to be configured with two CloudHub 1.0 workers and will use the zero-downtime feature in CloudHub 1.0. This is expected to result in, at most, several Mule application deployments per hour.

What is the minimum number of IP addresses that should be configured for this VPC resulting in the smallest usable range of private IP addresses to support the deployment and zero-downtime of these 150 Mule applications (not accounting for any future Mule applications)?

- **A. 10.0.0.0/21 (2048 IPs)**
- B. 10.0.0.0/22 (1024 IPs)
- C. 10.0.0.0/24 (256 IPs)
- D. 10.0.0.0/23 (512 IPs)

**Answer: A**

#### NEW QUESTION # 59

A company is designing a Mule application named Inventory that uses a persistent Object Store. The Inventory Mule application is deployed to CloudHub and is configured to use Object Store v2.

Another Mule application named Cleanup is being developed to delete values from the Inventory Mule application's persistent Object Store. The Cleanup Mule application will also be deployed to CloudHub.

What is the most direct way for the Cleanup Mule application to delete values from the Inventory Mule application's persistent Object Store with the least latency?

- A. Use an Object Store connector configured to access the Inventory Mule application's persistent Object Store
- B. Use an Anypoint MQ connector configured to directly access the Inventory Mule application's persistent Object Store
- C. Use a VM connector configured to directly access the persistent queue of the Inventory Mule application's persistent Object Store
- **D. Use the Object Store v2 REST API configured to access the Inventory Mule application's persistent Object Store**

**Answer: D**

#### NEW QUESTION # 60

An organization has previously provisioned its own AWS virtual private cloud (VPC) that contains several AWS instances. The organization now needs to use CloudHub 1.0 to host a Mule application that will implement a REST API.

Once deployed to CloudHub 1.0, this Mule application must be able to communicate securely with the customer-provisioned AWS VPC resources within the same region, without being interceptable on the public internet.

Which Anypoint Platform features should be used to meet these network communication requirements between CloudHub 1.0 and the existing customer-provisioned AWS VPC?

- A. Add default API Allowlist policies to API Manager that automatically secure traffic from the range of IP addresses located in the customer-provisioned AWS VPC to access the Mule application
- B. Configure a MuleSoft-hosted (CloudHub 1.0) Dedicated Load Balancer with mapping rules that allow secure traffic from the range of IP addresses located in the customer-provisioned AWS VPC to access the Mule application
- **C. Add a MuleSoft-hosted (CloudHub 1.0) Anypoint VPC configured with VPC peering to the range of IP addresses located in the customer-provisioned AWS VPC**

- D. Configure an external identity provider (IdP) in Anypoint Platform with certificates from an AWS Transit Gateway for the customer-hosted AWS VPC, where the certificates allow the range of IP addresses located in the customer-provisioned AWS VPC

**Answer: C**

#### NEW QUESTION # 61

A developer is developing an MUnit test suite for a Mule application. This application must access third-party vendor SOAP services. In the CI/CD pipeline, access to third-party vendor services is restricted. Without MUnits, a successful run and coverage report score is less than the threshold, and builds will fail.

Which solution can be implemented to execute MUnits successfully?

- A. For the CI/CD pipeline, add a skip clause in the flow for invoking SOAP services
- B. In MUnits, invoke a dummy SOAP service to send a mock response for those calls
- **C. In MUnits, mock a SOAP service invocation and provide a mock response for those calls**
- D. In the CI/CD pipeline, create and deploy mock SOAP services

**Answer: C**

#### NEW QUESTION # 62

.....

Considering all customers' sincere requirements, Mule-Arch-202 test question promise to our candidates with plenty of high-quality products, considerate after-sale services. Numerous advantages of Mule-Arch-202 training materials are well-recognized, such as 99% pass rate in the exam, free trial before purchasing, secure privacy protection and so forth. From the customers' perspective, We treasure every customer's reliance and feedback to the optimal Mule-Arch-202 Practice Test and be the best choice.
