## Practical 156-315.82 Information, New 156-315.82 Test Preparation

Our purchasing process is designed by the most professional experts, that's the reason why we can secure your privacy while purchasing our 156-315.82 test guide. As the employment situation becoming more and more rigorous, it's necessary for people to acquire more 156-315.82 skills and knowledge when they are looking for a job. Enterprises and institutions often raise high

acquisition for massive candidates, and aim to get the best quality talents. Thus a high-quality 156-315.82 Certification will be an outstanding advantage, especially for the employees, which may double your salary, get you a promotion. So choose us, choose a brighter future.

## CheckPoint Check Point Certified Security Expert - R82 Sample Questions (Q90-Q95):

### NEW QUESTION # 90

When installing policy, which process is responsible for Verification / conversion?

- A. FWD
- B. CPD
- C. FWM
- D. CPM

**Answer: C**

Explanation:

The Firewall Management process performs policy verification and conversion on the Management Server by compiling the security policy into the executable format that gateways can enforce during installation.

### NEW QUESTION # 91

When a solution is configured with Route-based VPN method what interfaces are used?

- A. Virtual Tunnel Interfaces (VTI)
- B. External interface with a secondary IP address
- C. Only the internal interfaces, which are included in a special Route-based Domain (Network Group object).
- D. The Gaia Portal Web User Interface (WebUI)

**Answer: A**

Explanation:

Route-based VPN uses Virtual Tunnel Interfaces, which create logical interfaces that act like routed links, allowing traffic to be directed through the VPN using standard routing instead of encryption domains.

### NEW QUESTION # 92

What can be upgraded using Central Deployment?

- A. Gateways, Cluster Members
- B. Only Gateways, no Clusters
- C. Security Management Servers, Gateways, Cluster Members
- D. Security Management Servers, Dedicated Log Servers, Gateways, Cluster Members

**Answer: D**

Explanation:

The correct answer is B, with one important precision: in R82, SmartConsole Central Deployment is primarily used for Security Gateways and Cluster Members, and R82 enhancements also add support for package installation on Secondary Management Servers, Dedicated Log Servers, and Dedicated SmartEvent Servers.

Check Point's R82 "What's New" documentation states that Central Software Deployment through SmartConsole was enhanced to support installation of packages on Secondary Management Servers and Dedicated Log Servers. The Security Management Administration Guide also states that Central Deployment can deploy Upgrade Packages on Security Gateways, Cluster Members, Log Servers, and secondary management. Option A is incomplete because it omits Dedicated Log Servers. Option C reflects the older

/common gateway-and-cluster focus but is incomplete for R82. Option D is plainly wrong because clusters are supported. The best available answer is therefore B, but a strict administrator should interpret "Security Management Servers" here as supported secondary management targets, not a blanket claim that every primary management server upgrade should be driven through Central Deployment. Reference topic: R82 Central Deployment Enhancements / Supported Targets.

### NEW QUESTION # 93

In an ElasticXL Cluster what is the maximum supported number of cluster members?

- A. 52 appliances on each site with support for Dual Site
- **B. 3 on each Site (6 in total in Dual Site)**
- C. 2 on each Site (4 in total in Dual Site)
- D. 13 on each Site

**Answer: B**

Explanation:

An ElasticXL Cluster supports a maximum of 3 members per site, allowing for up to 6 appliances in a dual-site configuration, which balances scalability with synchronization and management overhead.

### NEW QUESTION # 94

SmartEvent general settings and event policy are configured using which interface or tool?

- A. SmartLog
- **B. SmartEvent GUI Client**
- C. SmartView in Web Browser
- D. SmartConsole Logs & Monitor

**Answer: B**

Explanation:

The correct answer is A. SmartEvent general settings and Event Policy are configured through the SmartEvent GUI Client, exposed in current R82 documentation as SmartEvent Settings & Policy from SmartConsole's Logs & Events area. Check Point's Logging and Monitoring documentation states that to open the SmartEvent GUI, the administrator opens SmartConsole, goes to Logs & Events, opens a new catalog tab, and selects SmartEvent Settings & Policy under External Apps. Option B, SmartView in a browser, is used for web-based log and event viewing/reporting, but it is not the primary configuration interface for SmartEvent general settings and event policy. Option C is close only in navigation terms, but Logs & Monitor itself is not the separate SmartEvent policy configuration client. Option D is wrong because SmartLog is for log viewing /searching, not configuring SmartEvent correlation policy. For CCSE precision, associate SmartEvent policy configuration with SmartEvent Settings & Policy, not ordinary log search. Reference topic: Logging and Monitoring Clients / Opening the SmartEvent GUI.
