

# ServiceNow CIS-PA시험패스덤프공부자료 - CIS-PA최신인증시험정보

참고: Itcertkr에서 Google Drive로 공유하는 무료, 최신 CIS-PA 시험 문제집이 있습니다: <https://drive.google.com/open?id=1LpNLdOv5U0MFIRAN7T3ygyfkI0NSy2Ei>

ServiceNow인증CIS-PA시험을 패스함으로 취업에는 많은 도움이 됩니다. Itcertkr는 ServiceNow인증CIS-PA시험패스로 꿈을 이루어주는 사이트입니다. 우리는 ServiceNow인증CIS-PA시험의 문제와 답은 아주 좋은 학습자료로도 충분한 문제집입니다. 여러분이 안전하게 간단하게 ServiceNow인증CIS-PA시험을 응시할 수 있는 자료입니다.

## ServiceNow CIS-PA 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> <li>• Data Collection: This domain explains how Performance Analytics gathers and processes data, including collection flow, configuration properties, and troubleshooting collection issues.</li> </ul>
주제 2	<ul style="list-style-type: none"> <li>• Administration and Solutions: This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>• Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>• Architecture and Deployment: This domain covers the foundational components of the Performance Analytics solution and the proper deployment sequence in ServiceNow environments.</li> </ul>

## 최신 업데이트된 CIS-PA시험패스 덤프공부자료 공부자료

ServiceNow CIS-PA 덤프는 ServiceNow CIS-PA 시험의 모든 문제를 커버하고 있어 시험적중율이 아주 높습니다. Itcertkr는 Paypal과 몇년간의 파트너 관계를 유지하여 왔으므로 신뢰가 가는 안전한 지불방법을 제공해드립니다. ServiceNow CIS-PA시험탈락시 제품비용 전액환불조치로 고객님의 이익을 보장해드립니다.

## 최신 CIS-Platform Analytics CIS-PA 무료샘플문제 (Q14-Q19):

### 질문 # 14

Where are Next Experience Dashboards and Data Visualizations created?

- A. In Reports Administration

- B. In the Analytics Hub
- **C. In the Analytics Center**
- D. In Analytics Administration

**정답: C**

**설명:**

Analytics Center is the workspace used to create and manage Next Experience Dashboards and Data Visualizations. It provides a unified interface for building modern, interactive analytics experiences, including metric visualizations, time series, breakdown views, and dashboards.

Analytics Hub is primarily used for viewing and exploring existing analytics, not creating them. Reports Administration and Analytics Administration serve different purposes and do not support Next Experience dashboard creation. ServiceNow documentation explicitly identifies Analytics Center as the creation and management environment for Next Experience analytics content, making option D the correct answer.

**질문 # 15**

What does the "Allow formula component to be NULL" setting for a Formula Indicator do?

- A. It skips the formula calculation if any component is NULL
- B. It converts NULL values to zero
- C. It always returns zero if any component is NULL
- **D. It allows components to be NULL without aborting the formula**

**정답: D**

**설명:**

The "Allow formula component to be NULL" setting controls how a Formula Indicator behaves when one or more component indicators return NULL values. When enabled, the formula continues to calculate using the available components instead of aborting the calculation.

If this setting is disabled and any component returns NULL, the entire formula result becomes NULL. The setting does not automatically convert NULLs to zero, nor does it skip calculation entirely. ServiceNow documentation explains that this option provides flexibility in environments where some component indicators may not have data for every period, ensuring the formula can still produce meaningful results.

Therefore, option D accurately describes the behavior.

**질문 # 16**

How many queries are performed against the database when a Daily Data Collection job is executed?

- A. One for each automated indicator
- B. One for each indicator frequency
- C. One for each indicator type
- **D. One for each indicator source**

**정답: D**

**설명:**

During a Daily Data Collection job, Platform Analytics executes one database query per Indicator Source, not per indicator. Multiple indicators can reference the same indicator source, allowing the platform to reuse the result set and calculate multiple scores from a single query.

This design is a key performance optimization in Platform Analytics. Executing queries per indicator would significantly increase database load, especially in large implementations. ServiceNow documentation explicitly states that indicator sources are the unit of data retrieval during collection, making option B the correct and documented answer.

**질문 # 17**

When configuring a new Metric Definition to track the duration an incident is assigned to a specific group, which type should be selected?

- **A. Field value duration**

- B. State change
- C. Assignment group
- D. Script calculation

정답: A

설명:

To track how long an incident remains assigned to a specific group, the correct Metric Definition type is Field value duration. This type measures the amount of time a record spends with a particular value in a specified field, such as assignment\_group. State change metrics track transitions between states, not time spent in a field value. Script calculations are used only when duration cannot be calculated through standard field tracking. "Assignment group" is a field, not a metric type. ServiceNow documentation specifies that Field value duration metrics are designed for tracking time spent in a given field value, making option A the correct choice.

질문 # 18

Which Indicator should be excluded from a Historic Data Collection because its scores cannot be accurately collected?

- A. Number of open problems not updated in the last 90 days
- B. Summed age of open problems
- C. Number of incidents resolved in time
- D. Number of new requests

정답: B

설명:

Historic Data Collection is designed to accurately reconstruct past indicator scores based on historical records. Indicators that rely on calculated age values, such as summed age of open problems, cannot be accurately reconstructed because age is a time-relative value that depends on the exact moment of calculation.

Count-based indicators (options A, B, and D) can be recalculated historically by evaluating record states at specific points in time. However, summing age values requires knowing the precise age of each record at each historical interval, which is not reliably reproducible. ServiceNow documentation explicitly warns against using historic data collection for age-based and duration-sum indicators, making option C the correct exclusion.

질문 # 19

.....

Itcertkr ServiceNow CIS-PA덤프 구매전 혹은 구매후 의문나는 점이 있으시면 한국어로 온라인서비스 혹은 메일로 상담 받으실수 있습니다. 기술 질문들에 관련된 문제들을 해결 하기 위하여 최선을 다 할것입니다. 고객님의 Itcertkr ServiceNow CIS-PA덤프와 서비스에 만족 할 수 있도록 저희는 계속 개발해 나갈 것입니다.
