Development-Lifecycle-and-Deployment-Architect test braindump, Salesforce Development-Lifecycle-and-Deployment-Architect test exam, Development-Lifecycle-and-Deployment-Architect real braindump

The price for Development-Lifecycle-and-Deployment-Architect learning materials is quite reasonable, no matter you are a student or you are an employee in the company, and you can afford the expense. Besides, Development-Lifecycle-and-Deployment-Architect exam braindumps of us is famous for the high-quality and accuracy. You can pass the exam just one time if you choose us. Development-Lifecycle-and-Deployment-Architect Learning Materials contain both questions and answers, and you can know the answers right now after you finish practicing. We offer you free update for one year and the update version for Development-Lifecycle-and-Deployment-Architect exam dumps will be sent to your email automatically.

Salesforce Certified Development Lifecycle and Deployment Architect

Sample Questions (Q43-Q48):

NEW QUESTION # 43

An Architect is working on a Universal Containers project, and due to security concerns they cannot provide the Architect with production access. Instead, a central release management team will be responsible for performing production deployments for all development teams. How should an Architect leverage the Metadata API to ensure any metadata components necessary to deploy the project's functionality are properly communicated to the release management team?

- A. Provide a spreadsheet of all components and utilize the metadata API's readMetadata call
- B. Provide the Release Management team a copy of the audit trail from the sandbox you wish to deploy from
- C. Create a change set in each sandbox and download the package.xml file for the release management team
- **D. Send a package.xml file with associated metadata in a .zip file to the Release Management team**

Answer: D

NEW QUESTION # 44

In architect is working on a project that relies on functionality that cannot be deployed via the Metadata API. What is the best practice for making sure these components are deployed successfully?

- A. Utilize the metadata API's deploy All Components call
- **B. Document deployment steps for any components that cannot be automatically deployed**
- C. Generate and deploy a change set that enables the required settings
- D. Generate and install a managed package that enables the required settings

Answer: B

Explanation:

This is the correct answer because some components, such as custom settings, user permissions, and email templates, cannot be deployed via the Metadata API. Therefore, these components should be documented and manually deployed or configured in the target environment.

NEW QUESTION # 45

Northern Trail Outfitters (NTO) recently acquired Eastern Trail Outfitters (ETO). NTO's sales leadership team had hands-on experience with the ETO's Sales Optimization app and have given the feedback that the app would benefit NTO's sales team. Which option should the architect recommend for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time?

- **A. Create users in ETO's org and provide access to NTO's sales team**
- B. Create a managed package of the app and deploy in NTO's org.
- C. Create an unmanaged package of the app and deploy in NTO's org.
- D. Create a core team and build the Sales Optimization app in NTO's org.

Answer: A

NEW QUESTION # 46

What are two limitations an architect should consider when designing a strategy for managing technical reference data, with multiple related objects?

Choose 2 answers

- **A. Apex CPU limits**
- **B. HTTP response size**
- C. Depth of nested relationships
- D. Circular relationships

Answer: A,B

Explanation:

Apex CPU limits and HTTP response size are two limitations that an architect should consider when designing a strategy for

managing technical reference data, with multiple related objects. Apex CPU limits may be exceeded if the data retrieval or manipulation logic is complex or inefficient. HTTP response size may be too large if the data payload contains many related objects or fields. Circular relationships and depth of nested relationships are not limitations, but design considerations that may affect the data model and query performance.

NEW QUESTION # 47

Northern Trail Outfitters (NTO) recently acquired Eastern Trail Outfitters (ETO). NTO's sales leadership team had hands-on experience with the ETO's Sales Optimization app and have given the feedback that the app would benefit NTO's sales team. Which option should the architect recommend for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time?

- A. Create an unmanaged package of the app and deploy in NTO's org.
- B. Create users in ETO's org and provide access to NTO's sales team.
- C. Create a managed package of the app and deploy in NTO's org.
- D. Create a core team and build the Sales Optimization app in NTO's org.

Answer: A

Explanation:

Explanation

Creating an unmanaged package of the app and deploying it in NTO's org is the best option for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time. An unmanaged package is a collection of components that can be easily installed and customized in another org. Unlike a managed package, an unmanaged package does not have any restrictions or dependencies on the source org, and does not require a security review or approval from Salesforce. Creating a managed package, creating users in ETO's org, or building the app from scratch in NTO's org are not as fast or efficient as creating an unmanaged package.

NEW QUESTION # 48

.....

The Development-Lifecycle-and-Deployment-Architect exam is on trend but the main problem that every applicant faces while preparing for it is not making the right choice of the Development-Lifecycle-and-Deployment-Architect Questions. They struggle to find the right platform to get actual Development-Lifecycle-and-Deployment-Architect exam questions and achieve their goals.
