## Mock Cloud-Digital-Leader Exams - Vce Cloud-Digital-Leader Download

If you want to pass the exam smoothly buying our Cloud-Digital-Leader useful test guide is your ideal choice. They can help you learn efficiently, save your time and energy and let you master the useful information. Our passing rate of Cloud-Digital-Leader study tool is very high and you needn't worry that you have spent money and energy on them but you gain nothing. We provide the great service after you purchase our Cloud-Digital-Leader cram training materials and you can contact our customer service at any time during one day. It is a pity if you don't buy our Cloud-Digital-Leader study tool to prepare for the test Cloud-Digital-Leader certification.

## Google Cloud Digital Leader Sample Questions (Q336-Q341):

### NEW QUESTION # 336

You are a program manager within a Software as a Service (SaaS) company that offers rendering software for animation studios. Your team needs the ability to allow scenes to be scheduled at will and to be interrupted at any time to restart later. Any individual scene rendering takes less than 12 hours to complete, and there is no service-level agreement (SLA) for the completion time for all scenes. Results will be stored in a global Cloud Storage bucket. The compute resources are not bound to any single geographical location. This software needs to run on Google Cloud in a cost-optimized way.

What should you do?

- A. Develop the application so it can run in an unmanaged instance group
- B. Create a reservation for the minimum number of Compute Engine instances you will use
- **C. Deploy the application on Compute Engine using preemptible instances**
- D. Start more instances with fewer virtual centralized processing units (vCPUs) instead of fewer instances with more vCPUs

**Answer: C**

Explanation:

<https://cloud.google.com/compute/docs/instances/preemptible>

### NEW QUESTION # 337

You have deployed a new public web application that allows users to register and login with email ids, phone numbers, or user ids. You are seeing some unusual activity with user registrations and logins from a few IPs.

A large number of accounts were created very quickly. Logins are also happening quickly thereafter from these new accounts. Different parts of the application are being explored, all of which are putting a heavy load on the application. What could be a problem and how can you solve it?

- A. A hacker group has hired a bunch of people to create accounts and manually use the system. Use Cloud Asset Inventory to see if there have been changes in the inventory.
- B. Automated testing tools might still be running and creating accounts. Use Identity-Aware Proxy to restrict the users to known users.
- C. Bots are creating accounts and then using them. Use Identity-Aware Proxy to restrict the users to known users.
- **D. Bots are creating accounts and then using them. Use Google Cloud's Web App and API Protection (WAAP).**

**Answer: D**

Explanation:

Bots attacking the application is the most likely scenario in this case. Using WAAP is the right protection plan: Anti-DDoS, anti-bot, WAF, and API protection help you protect against new and existing threats while helping you keep your apps and APIs compliant and continuously available.

### NEW QUESTION # 338

Your organization needs to allow a production job to have access to a BigQuery dataset. The production job is running on a Compute Engine instance that is part of an instance group.

What should be included in the IAM Policy on the BigQuery dataset?

- A. The Compute Engine instance
- B. The Compute Engine instance group
- C. The project that owns the Compute Engine instance
- **D. The Compute Engine service account**

**Answer: D**

Explanation:

When an identity calls a Google Cloud API, BigQuery requires that the identity has the appropriate permissions to use the resource. You can grant permissions by granting roles to a user, a group, or a service account.

Reference link- <https://cloud.google.com/bigquery/docs/access-control>

### NEW QUESTION # 339

What does Cloud Debugger help an organization do?

- A. Analyze live source code during user downtime.
- **B. Inspect source code in real time without affecting user downtime.**
- C. Implement code updates in real time without affecting the service level objective (SLO).
- D. Manage code and accelerate application development.

**Answer: B**

Explanation:

Cloud Debugger is a feature of Google Cloud Platform that lets you inspect the state of an application, at any code location, without stopping or slowing down the running app. Cloud Debugger makes it easier to view the application state without adding logging statements.

### NEW QUESTION # 340

A startup is planning to create their entire suite of applications on Google Cloud. They are looking at various open source technologies to build applications. One of the consideration is about having a well integrated monitoring tool. They have to be able to constantly review load capacity and performance of their applications and virtual machines. What would you advise them to do?

- A. Update the application code to regularly write to output logs. Export the logs to BigQuery to analyze them frequently.
- B. It is best to build a custom solution so that they know it integrates well with all their custom applications.
- C. Since they are using open source for applications, find another open source monitoring tool and integrate it, which could turn out to be very cheap.
- **D. Use the Google Cloud Operations Suite which contains monitoring among other operations tools.**

**Answer: D**

Explanation:

Explanation

Operations Suite is well integrated into Google and it's the recommended option.
