Fortinet NSE5_FSW_AD-7.6 Questions - Reduce your Chances of Failure in Exam
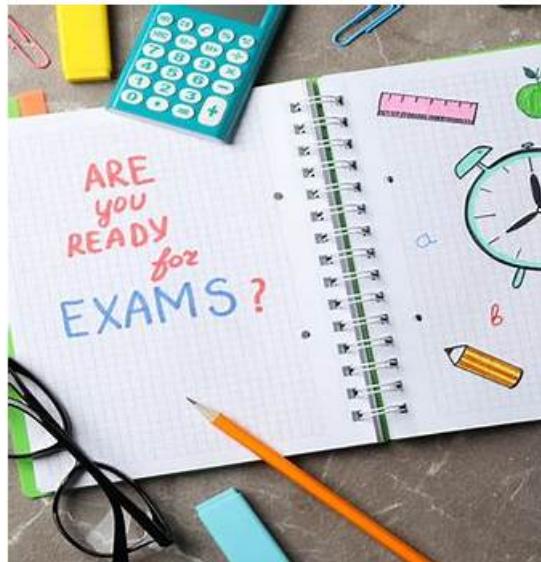

Our company has dedicated ourselves to develop the NSE5_FSW_AD-7.6 latest practice dumps for all candidates to pass the exam easier, also has made great achievement after more than ten years' development. As the certification has been of great value, a right NSE5_FSW_AD-7.6 exam guide can be your strong forward momentum to help you pass the exam like a hot knife through butter. On the contrary, it might be time-consuming and tired to prepare for the NSE5_FSW_AD-7.6 exam without a specialist study material. So it's would be the best decision to choose our NSE5_FSW_AD-7.6 Study Tool as your learning partner. Our NSE5_FSW_AD-7.6 study tool also gives numerous candidates a better perspective on the real exam. Having been specializing in the research of NSE5_FSW_AD-7.6 latest practice dumps, we now process a numerous of customers with our endless efforts, and we believe that our NSE5_FSW_AD-7.6 exam guide will percolate to your satisfaction.

As the industry has been developing more rapidly, our NSE5_FSW_AD-7.6 exam dumps have to be updated at irregular intervals in case of keeping pace with changes. To give you a better using environment, our experts have specialized in the technology with the system upgraded to offer you the latest NSE5_FSW_AD-7.6 Exam practices. What's more, we won't charge you in one-year cooperation; if you are pleased with it, we may have further cooperation. We will inform you of the latest preferential activities about our NSE5_FSW_AD-7.6 test braindumps to express our gratitude towards your trust.

Popular NSE5_FSW_AD-7.6 Exam Materials Can Help You Pass the Exam Successful - Actual4test

At Actual4test, we offer a NSE5_FSW_AD-7.6 dumps PDF, desktop Fortinet NSE5_FSW_AD-7.6 practice test software, and a web-based practice exam which is specifically designed to help you prepare for your Fortinet NSE5_FSW_AD-7.6 Certification Exam. Whether you are looking for real Fortinet NSE5_FSW_AD-7.6 dumps pdf file or practice exams to help you master the Fortinet NSE5_FSW_AD-7.6 exam, we have got you covered.

Fortinet NSE 5 - FortiSwitch 7.6 Administrator Sample Questions (Q77-Q82):

NEW QUESTION # 77
Refer to the diagnostic output:
What makes the use of the sniffer command on the FortiSwitch CLI unreliable on__port__23?

- A. Only untagged VLAN traffic can be captured.
- B. The switch port might be used as a trunk member
- C. Just the port egress payloads are printed on CLI.
- D. The types of packets captured is limited.

Answer: D

Explanation:
Page 452 of 7.2 study guide, specifically states "Although you can use the sniffer command to capture traffic on switch ports, the types of packets capture by the sniffer are very limited.
The use of the sniffer command on FortiSwitch CLI can be unreliable on port 23 for specific reasons related to the nature of traffic on the port:
D).The switch port might be used as a trunk member.When a switch port is configured as a trunk, it can carry traffic for multiple VLANs. If the sniffer is set up without specifying VLAN tags or a range of VLANs to capture, it may not accurately capture or display all the VLAN traffic due to the volume and variety of VLAN-tagged packets passing through the trunk port. This limitation makes using the sniffer on a trunk port unreliable for capturing specific VLAN traffic unless properly configured to handle tagged traffic.

For guidelines on how to properly use sniffer commands on trunk ports and configure VLAN filtering, consult the FortiSwitch CLI reference available through Fortinet support channels, including theFortinet Knowledge Base.

NEW QUESTION # 78
What type of multimode transceiver can be used to split a 40G port?

- A. QSFP transceiver
- B. SFP+ transceiver
- C. SFP transceiver
- D. QSFP+ transceiver

Answer: D

Explanation:
QSFP+ transceiver (A): The QSFP+ (Quad Small Form-factor Pluggable Plus) transceiver is designed to handle 40G data rates and can be used to split a 40G port into multiple 10G connections. This type of transceiver supports such configurations, making it suitable for high-density applications where multiple 10G connections are derived from a single 40G port, thereby maximizing the utilization of the port and the fiber infrastructure.

NEW QUESTION # 79
What feature can network administrators use to segment network operations and the administration of managed FortiSwitch devices on FortiGate?

- A. FortiLink split interface
- B. FortiGate multi-tenancy
- C. Multi-chassis link aggregation trunk
- D. FortiGate clustering protocol

Answer: B

Explanation:
FortiGate's multi-tenancy feature, specifically Virtual Domains (VDOMs), is the most appropriate tool for segmenting network operations and the administration of managed FortiSwitch devices on FortiGate. Here's why:
* VDOMs as Virtual Firewalls:VDOMs function as independent virtual firewalls within a single FortiGate device. Each VDOM can have its own:
* Security policies
* Interfaces (Including FortiLink interfaces for FortiSwitch management)

* Routing table
* Administrative access
* Segmenting Network Operations:By assigning different FortiSwitch devices (or groups of ports) to separate VDOMs, you effectively partition your network. Network administrators can manage specific FortiSwitches through their assigned VDOMs, maintaining operational isolation.
* Enhanced Administration:VDOMs offer granular administrative control. Different administrators can be assigned to specific VDOMs, limiting their management scope and reducing the risk of accidental configuration changes.
Why Other Options Are Less Suitable:
* B. Multi-chassis link aggregation trunk:This focuses on link redundancy and bandwidth aggregation, not network segmentation.
* C. FortiGate clustering protocol:This is aimed at high availability and scalability of the firewall functions themselves, not the management of switches.
* D. FortiLink split interface:This allows dividing a FortiLink interface on the FortiGate for managing multiple FortiSwitches, but it doesn't provide the true segmentation and administrative isolation that VDOMs offer.

NEW QUESTION # 80
Which Ethernet frame can create Layer 2 flooding due to all bytes on the destination MAC address being set to all FF?

* A. The multicast Ethernet frame
* B. The anycast Ethernet frame
* C. The unicast Ethernet frame
* D. The broadcast Ethernet frame

Answer: D

Explanation:
Layer 2 flooding caused by Ethernet frames with all bytes in the destination MAC address set to FF refers to broadcast frames.Here's why:
* Broadcast Ethernet Frame (A):
* Address Specification:In Ethernet networking, a broadcast frame has a destination MAC address ofFF:FF:FF:FF:FF:FF, which instructs network devices to forward the frame to all devices within the broadcast domain.
* Network Behavior:This causes Layer 2 flooding as the frame is sent to all ports in the VLAN, except the originating port, ensuring that the broadcast reaches all network segments.
* Other Frame Types:
* Unicast (B)targets a single device.
* Multicast (C)targets a group of devices.
* Anycast (D)is not used in Ethernet but rather in IP-based routing to route to the nearest of multiple destinations, typically in internet addressing.
References:You can find more information about Ethernet frame types in networking textbooks or documentation that discusses network layer interaction:Network Theory Books

NEW QUESTION # 81
Which LLDP-MED Type-Length-Values does FortiSwitch collect from endpoints to track network devices and determine their characteristics?

* A. Network policy
* B. Inventory management
* C. Power management
* D. Location

Answer: B

Explanation:
While FortiSwitch can collect all the listed LLDP-MED TLVs (Network Policy, Power Management, Location, and Inventory Management), the primary focus for tracking and identifying network devices is on theInventory ManagementTLV.
This TLV carries critical details such as:

* Manufacturer
* Model
* Hardware/Firmware versions
* Serial/Asset numbers
This information provides a granular understanding of the devices on your network.
