Start your journey to a bright future, and join the thousands of students who have already seen success by using Lpi Dumps of ActualTestsIT, you too can achieve your goals and get the LPIC-3 Exam 305: Virtualization and Containerization (305-300) certification of your dreams. Take the first step towards your future now and buy 305-300 exam dumps. You won't regret it!

Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q67-Q72):

NEW QUESTION # 67

How does cloud-init enhance the customization of cloud instances?

- A. It provides a GUI for configuration
- B. It allows you to specify scripts and user data
- C. It automatically configures all aspects of the cloud instance
- D. It integrates with popular containerization tools

Answer: B

Explanation:

Cloud-init enhances cloud instance customization by allowing users to provide user data and scripts that are executed during the first boot of an instance. According to cloud-init documentation, these scripts and configuration files enable tasks such as installing packages, configuring services, setting hostnames, managing users, and injecting SSH keys.

Cloud-init does not automatically configure every aspect of an instance, nor does it provide a graphical interface. It also does not directly integrate with containerization tools. Its strength lies in automation and repeatability, making instance initialization consistent across environments.

Thus, the correct answer is B.

NEW QUESTION # 68

What is the default provider of Vagrant?

- A. virtualbox
- B. vmware_workstation
- C. hyperv
- D. docker
- E. kc

Answer: A

Explanation:

Explanation

Vagrant is a tool that allows users to create and configure lightweight, reproducible, and portable development environments. Vagrant supports multiple providers, which are the backends that Vagrant uses to create and manage the virtual machines. By default, VirtualBox is the default provider for Vagrant. VirtualBox is still the most accessible platform to use Vagrant: it is free, cross-platform, and has been supported by Vagrant for years. With VirtualBox as the default provider, it provides the lowest friction for new users to get started with Vagrant. However, users can also use other providers, such as VMware, Hyper-V, Docker, or LXC, depending on their preferences and needs. To use another provider, users must install it as a Vagrant plugin and specify it when running Vagrant commands. Users can also change the default provider by setting the VAGRANT_DEFAULT_PROVIDER environmental variable. References:

* Default Provider - Providers | Vagrant | HashiCorp Developer1

NEW QUESTION # 69

Which of the following statements is true regarding the following output of xl list:

□

- A. Ubuntu is idle or waiting for I/O.
- B. It is necessary to use the xl command to change Ubuntu's state to running.
- C. The domain with ID 2 uses Para virtualization.
- D. Both Debian and Ubuntu require xl commands to start running.
- E. CentOS is the domain which has consumed the most CPU time.

Answer: A

NEW QUESTION # 70

Which CPU flag indicates the hardware virtualization capability on an AMD CPU?

- A. SVM
- B. VIRT
- C. PVM
- D. HVM
- E. VMX

Answer: A

NEW QUESTION # 71

Which of the following tasks are part of a hypervisor's responsibility? (Choose two.)

- A. Provide host-wide unique PIDs to the processes running inside the virtual machines in order to ease inter-process

communication between virtual machines.

- B. Create filesystems during the installation of new virtual machine guest operating systems.
- **C. Isolate the virtual machines and prevent unauthorized access to resources of other virtual machines.**
- D. Manage authentication to network services running inside a virtual machine.
- **E. Map the resources of virtual machines to the resources of the host system.**

Answer: C,E

NEW QUESTION # 72

.....
